Part 5: Adding Custom CSS

Adding Custom CSS

In the last couple of tutorials we've been doing some UI work on our plugin. We've added a custom icon and put our sidebar to work. Today we'll cover another important aspect of controlling the look-and-feel of your plugin - bundling and using custom css.... read more

Part 4: Adding a Sidebar Menu

Adding a Sidebar Menu

In Part 3 we started looking at ways to polish the UI of our plugin. We began by adding a custom icon. Today, we'll learn how to create a menu of buttons in the left sidebar of our plugin.

Every plugin has a left sidebar area available. There are two things you can do with it:... read more

Part 3: Adding a Custom Icon

Adding a Custom Icon

In prior installments of this series, we've made good progress towards creating a functional Allura plugin. We haven't, however, spent much time on polishing the UI. Let's take some time to do that. The next few installments will cover several ways we can customize the look of our plugin.... read more

#4019 Add an easy way to filter ticket queries by open/closed without knowing Solr syntax

Milestone: forge-backlog

QA: Dave Brondsema

Updated: 3 days ago

Status: code-review

Component: Tracker

Created: 2012-04-06

Owner: nobody

Creator: Patrick Lenz

Labels: 42cc (331)

If you search from the "Search Tickets" form in the upper left and get an overwhelming number of results, it often times helps to just weed out either open or closed tickets (depending what you're looking for). I'd love a way to just add that filter with a click instead of redoing the search all over remembering the appropriate Solr syntax and whether or not I need to add `&&`.

[#1510] (wont-fix) is related. It proposes a UI for filtering tickets. It would also be realtime rather than be delayed like solr is, after tickets are updated.

Running Allura

- Python

- MongoDB

- Solr

- Git/SVN

.ini configuration:

```ini
[app:main]
site_name = Allura

domain = site.com
base_url = http://site.com

# Google Analytics account for tracking
# ga.account = UA-XXXXX-X

registration.method = local
theme = allura

# auth.method = ldap
auth.method = local
# auth.login_url = /auth/
# auth.logout_url = /auth/logout
# auth.login_fragment_url = /auth/login_fragment

# In seconds
auth.recovery_hash_expiry_period = 600

# SCM settings for local development
scm.host.ro.git = /srv/git$path
```
