NEWS & EVENTS

THIS WEEK IN SPRING, APRIL

Submitted by Josh Long on Tue, 2012-04-10
in [News and Announcements](#)

What a great week! The [Cloud Foundry](#) Asian and US legs of the tour. Now, onw secure your spot!)

Before we continue on to the heavy of the

**Imagine that you are building an
e-commerce application...**

E-COMMERCE APPLICATION DESIGN, v1.0

- 1. accounting service**
- 2. inventory service**
- 3. shipping service**

the simplest thing that could possibly work..

browsers

icons: get a chrome/ie/firefox icon
get apache httpd server icon
get a database icon (you know, the oracle stack with levels)
get a tomcat icon (for the tomcat bit)
get a bean icon (should be a Spring bean, next to each service)
get html5 icon for the UI layer piece

the simplest thing that could possibly work..

browsers

Tomcat

.war

icons: get a chrome/ie/firefox icon
get apache httpd server icon
get a database icon (you know, the oracle stack with levels)
get a tomcat icon (for the tomcat bit)
get a bean icon (should be a Spring bean, next to each service)
get html5 icon for the UI layer piece

the simplest thing that could possibly work..

What About... Other Types of Clients?

What About... Other Types of Clients?

What About... Other Types of Clients?

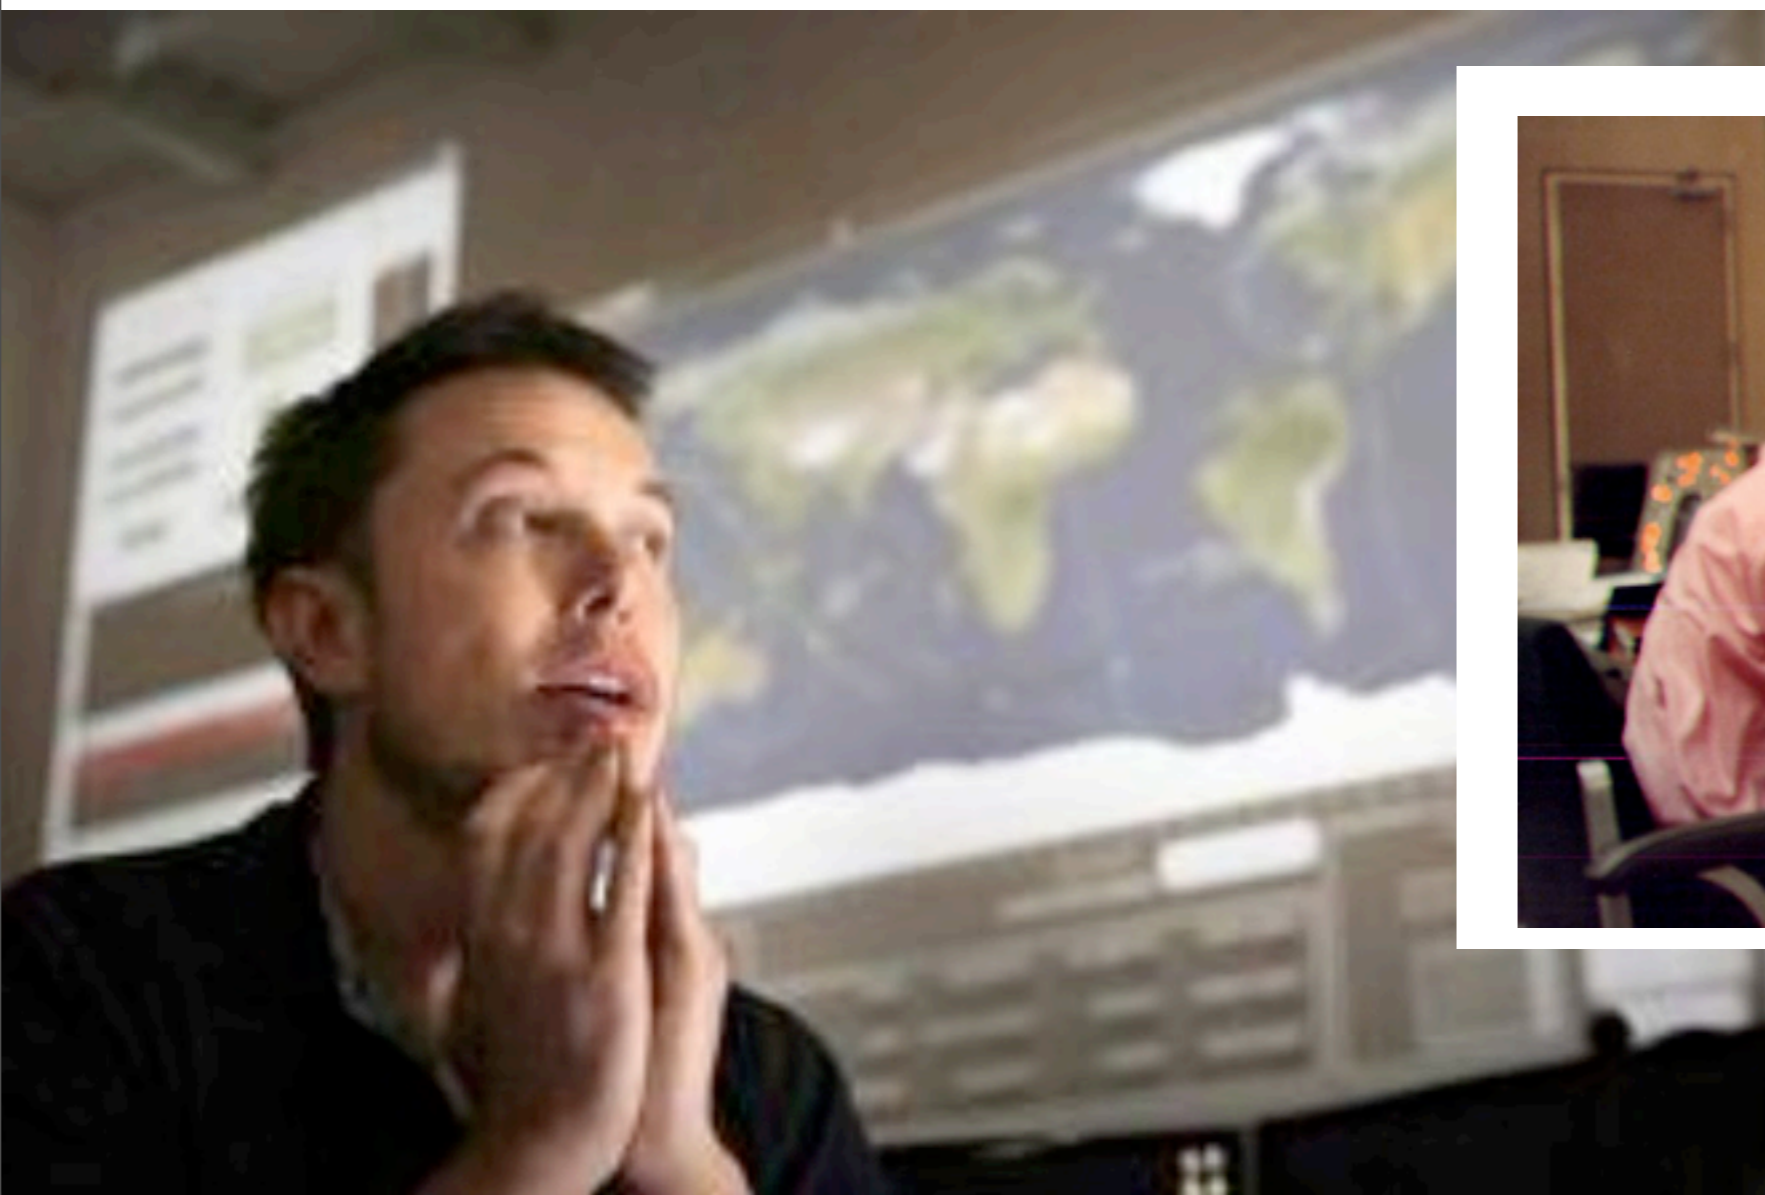

What About... Other Types of Clients?

What About... Other Types of Clients?

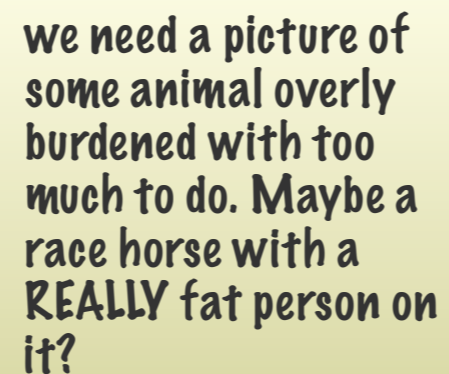

What About... Deployments?

**What About... your over-burdened
web container and IDE?**

What About... scaling to improve performance of individual services?

we need a picture of some animal overly burdened with too much to do. Maybe a race horse with a **REALLY** fat person on it?

What About... adopting other technologies?

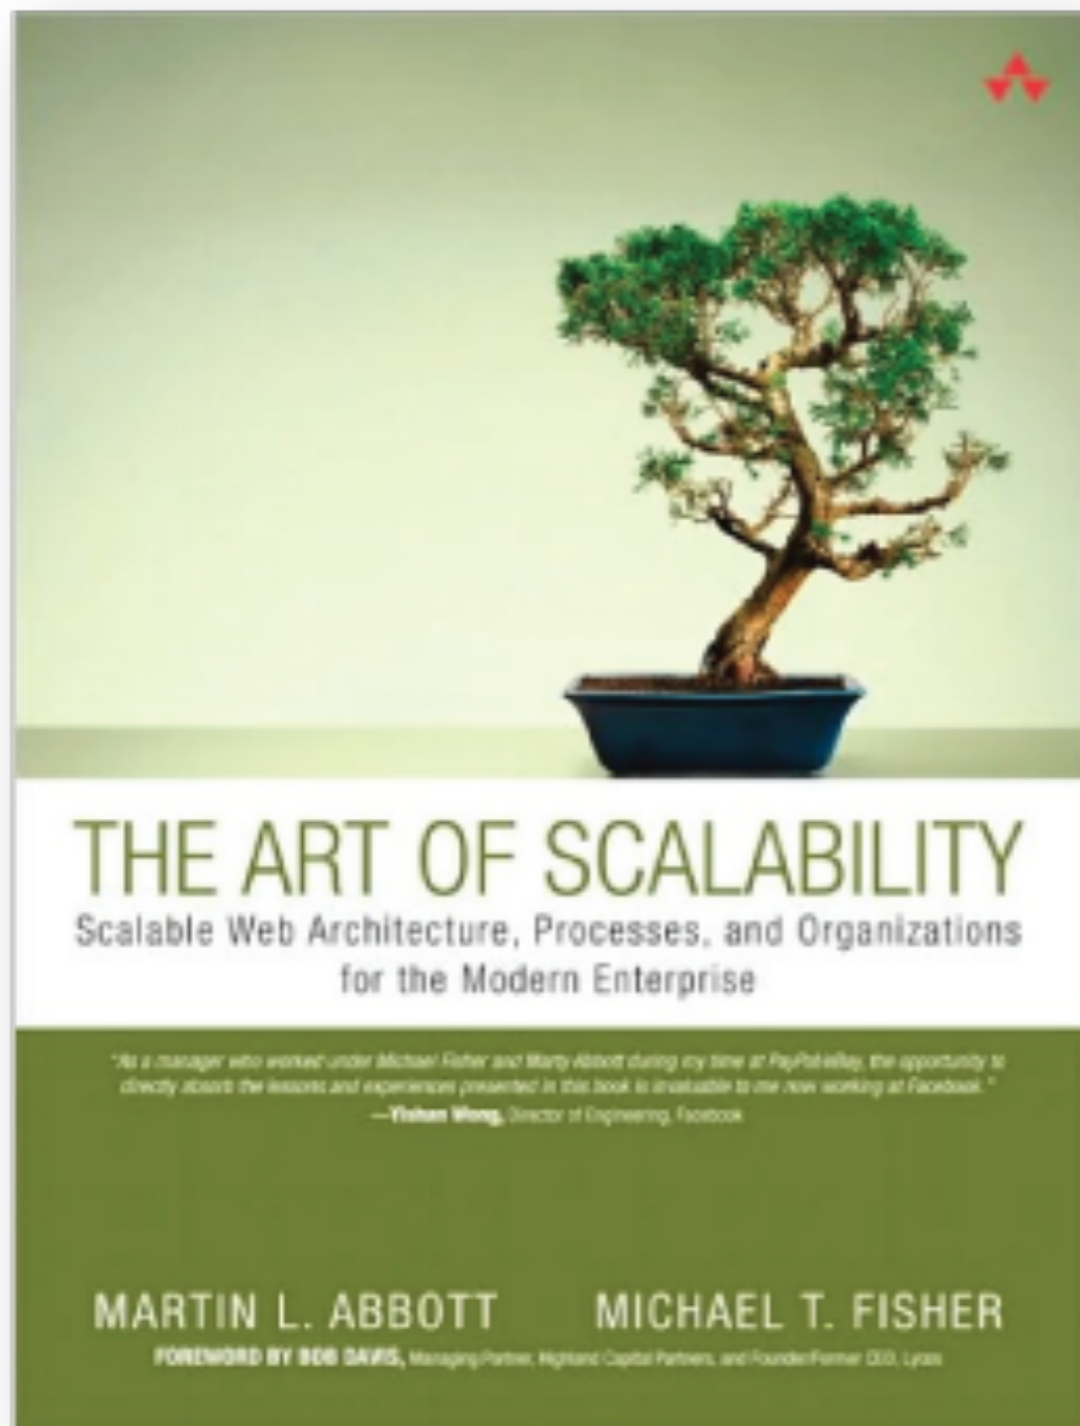

Not So Simple, After All...

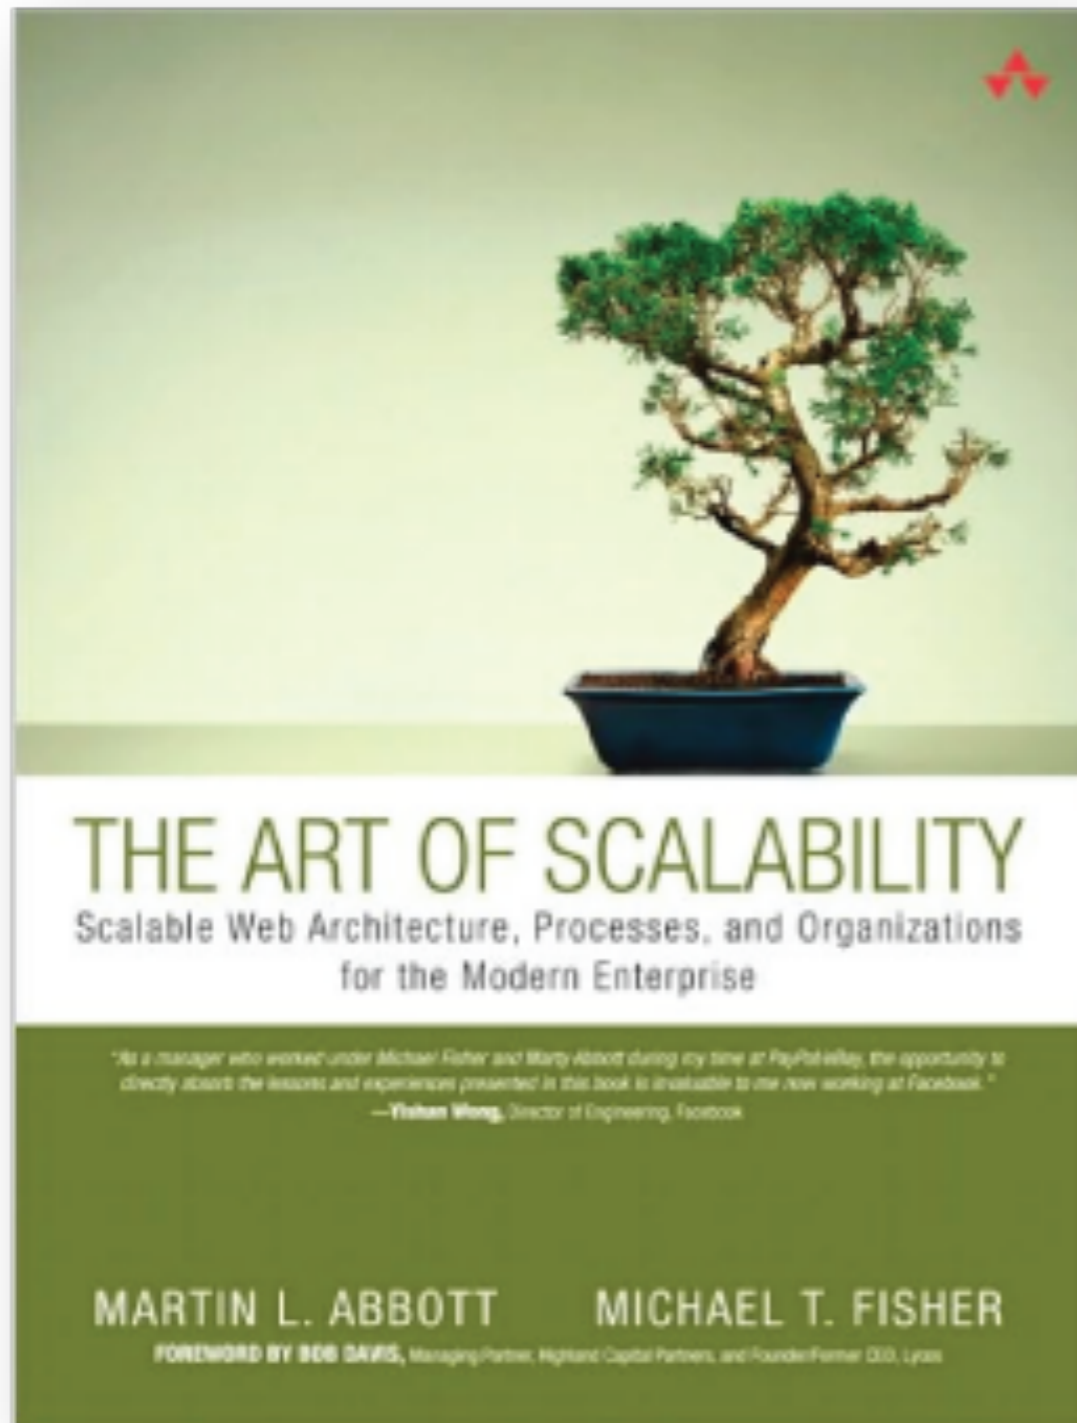

!= Scalable Development

3 Dimensions to Scaling

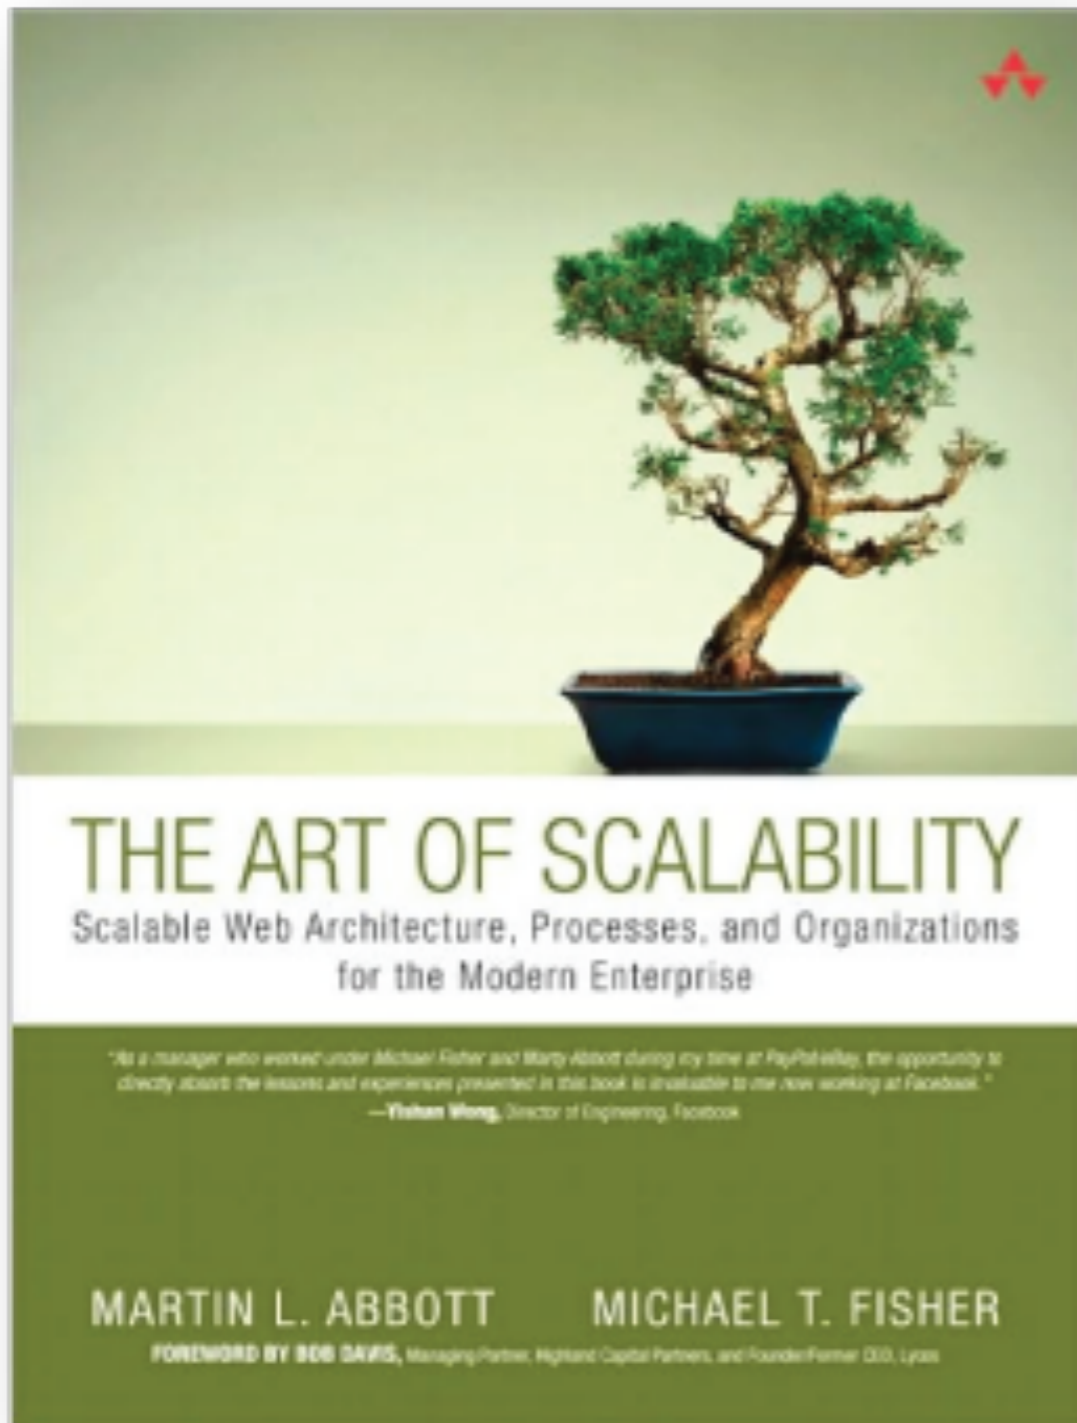

3 Dimensions to Scaling

- **horizontal duplication**
scale by cloning

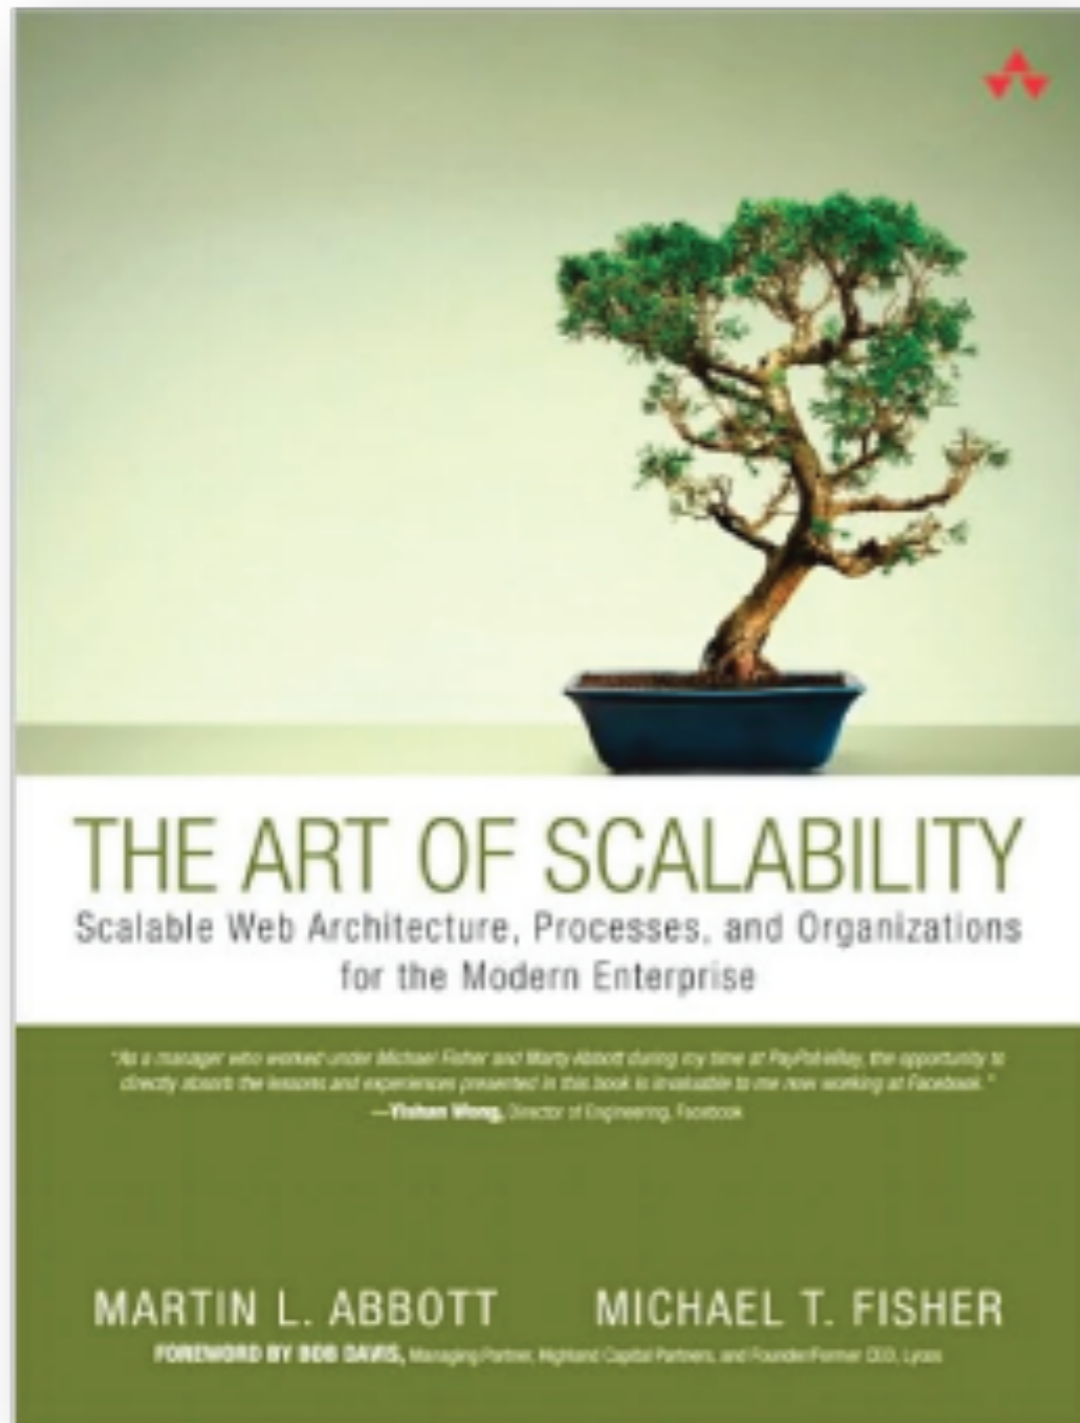

3 Dimensions to Scaling

- **horizontal duplication**
scale by cloning
- **functional decomposition**
scale by splitting different things

3 Dimensions to Scaling

- **horizontal duplication**
scale by cloning
- **functional decomposition**
scale by splitting different things
- **data partitioning**
scale by splitting similar things

Horizontal Duplication

Tomcat

.war

<http://queue.acm.org/detail.cfm?id=1394128>

Functional Decomposition: the **BAD**

See Steve Yegge's
Google Platforms Rant
regarding Amazon.com

Functional Decomposition: the **GOOD**

- scales development
- QoS scales independently
- enforces well defined interfaces between services
- makes polyglot architectures possible

need a p
pizza bo

need pic
modular

Two Types of Architecture

System

service

service

service

message
(RabbitMQ
etc this
change.

Smaller Services are Better

Fred

"Developer Anarchy"

figure out who fred
george is and see if i
can incorporate his
meaning into this
slides narrative

You are not the same you...

50 to 70 billion of your cells die **each day**

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

days stomach lining cells

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

days stomach lining cells

years bone cells

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

days stomach lining cells

years bone cells

lifetime brain cells

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

days stomach lining cells

years bone cells

lifetime brain cells

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

days stomach lining cells

years bone cells

lifetime brain cells

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

days stomach lining cells

years bone cells

lifetime brain cells

You are not the same you...

50 to 70 billion of your cells die **each day**

Cell lifetimes:

hours some white blood cells

days stomach lining cells

years bone cells

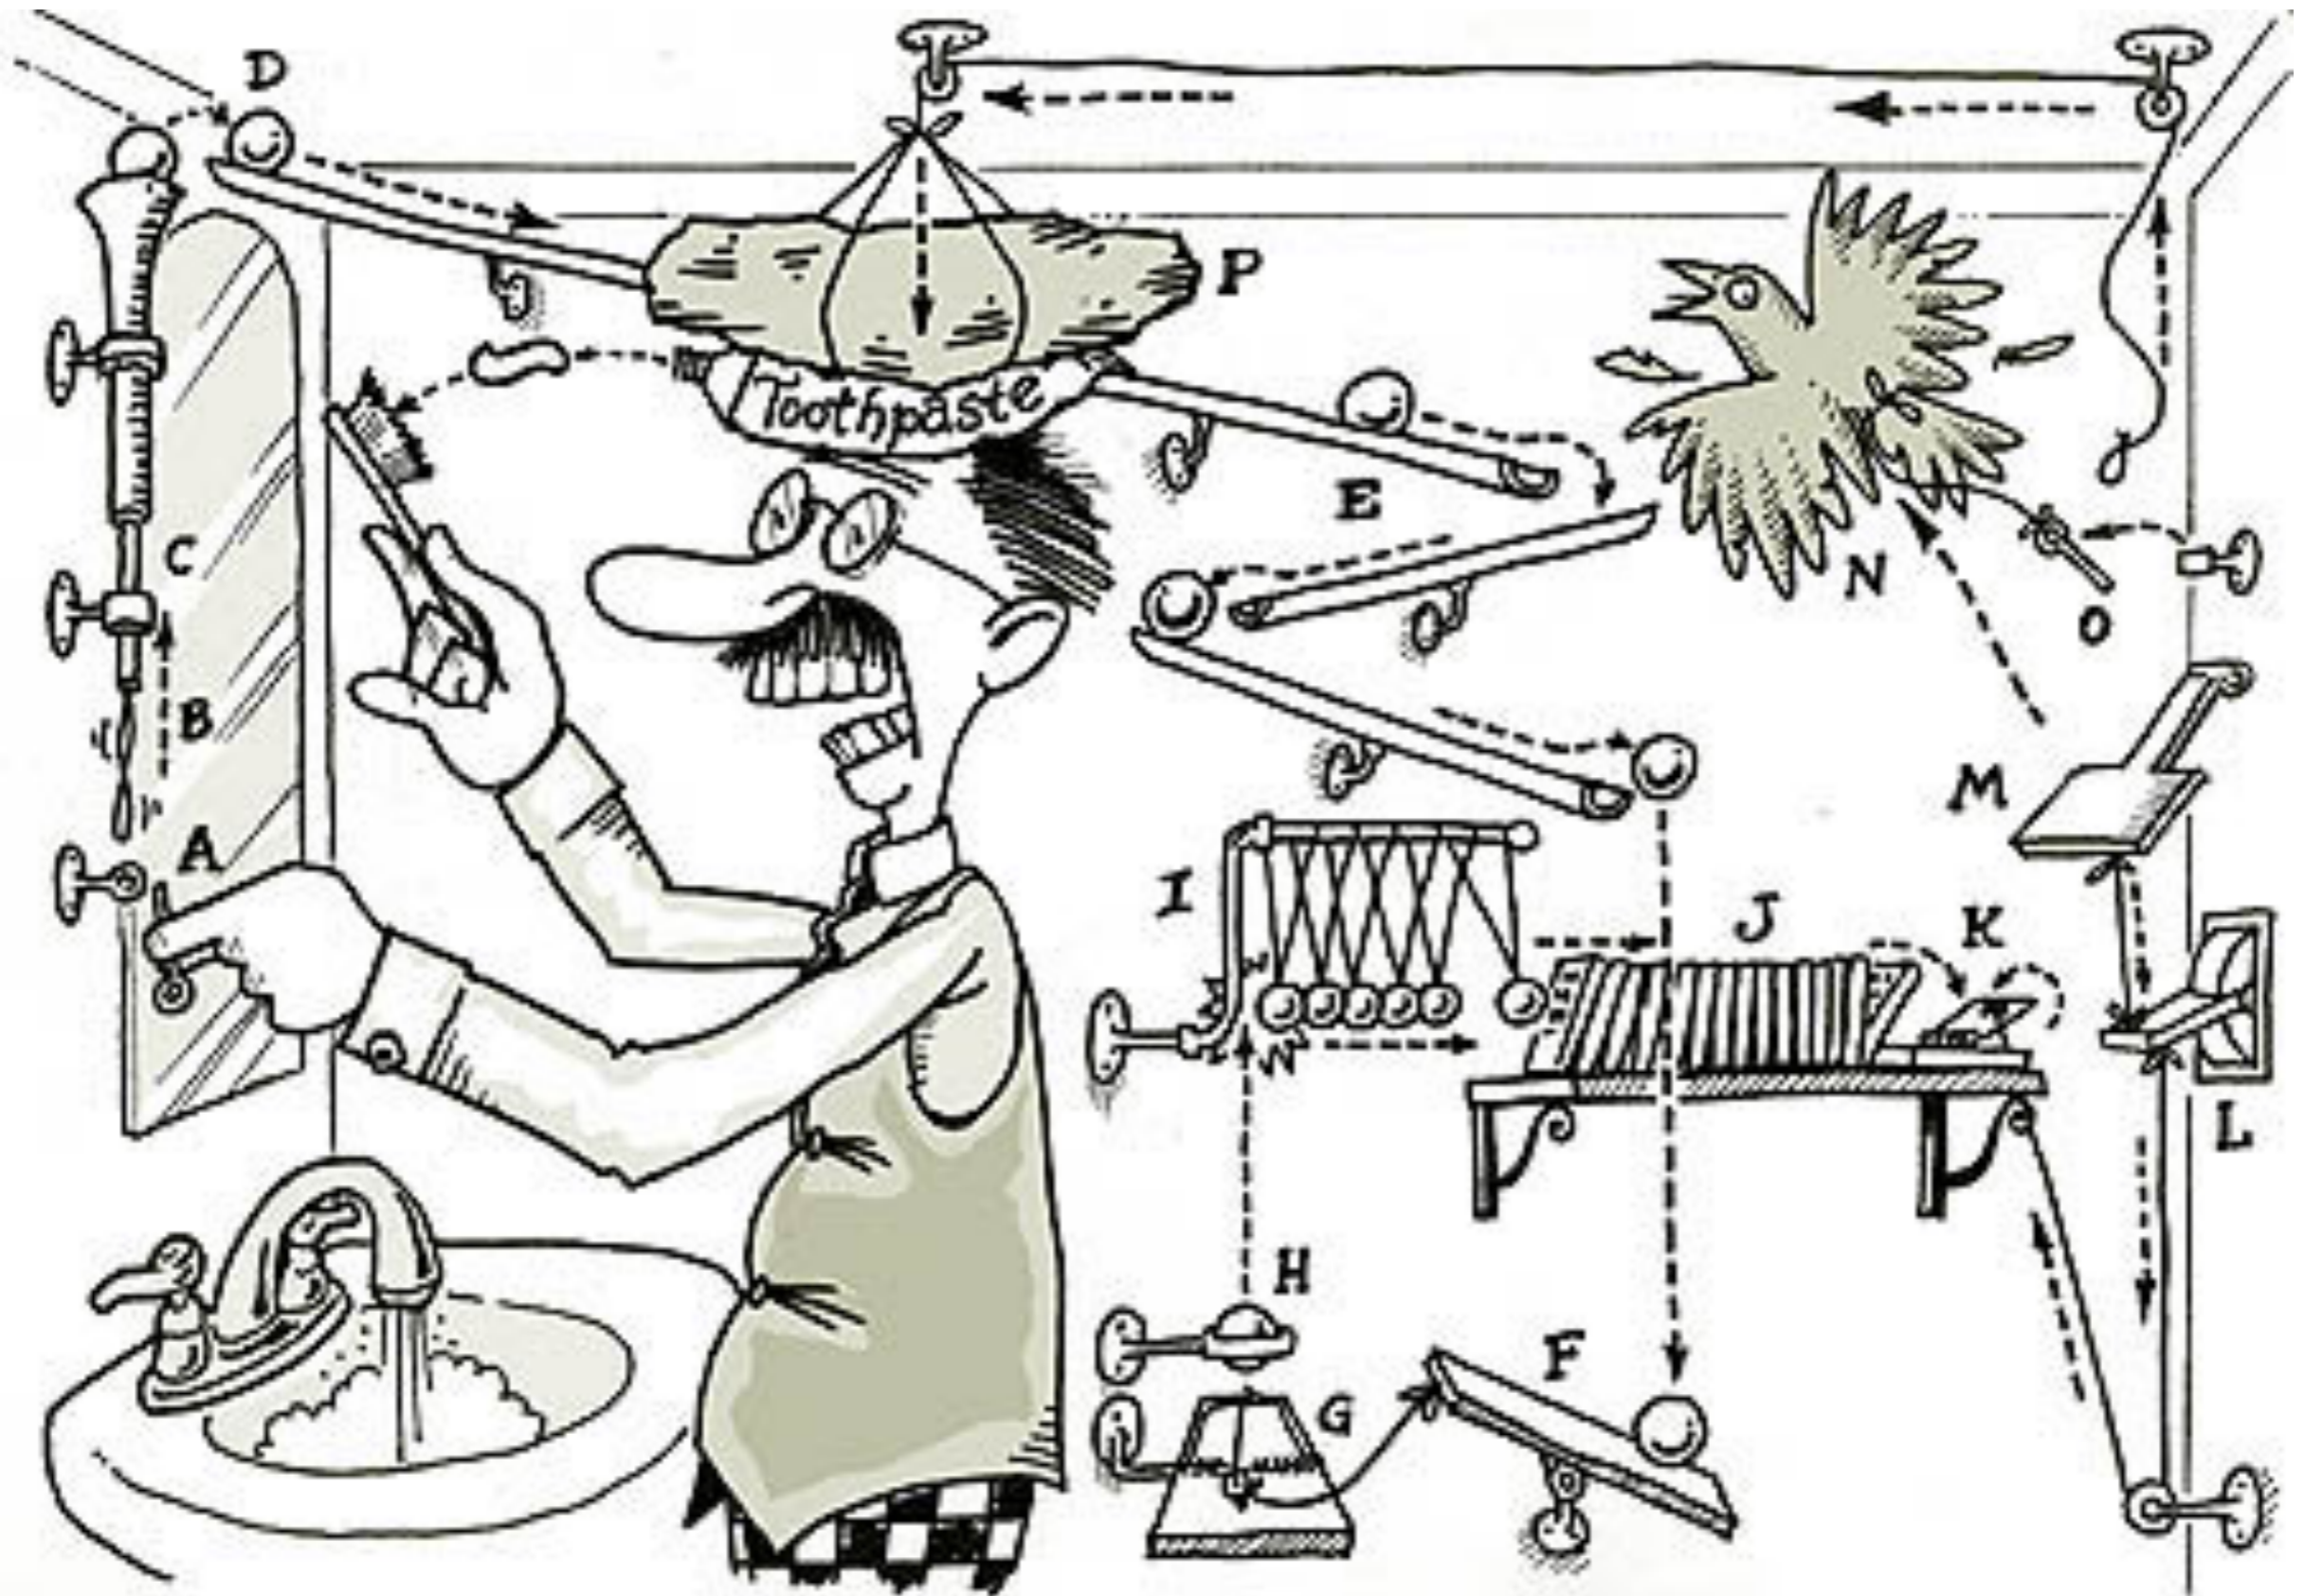

lifetime brain cells

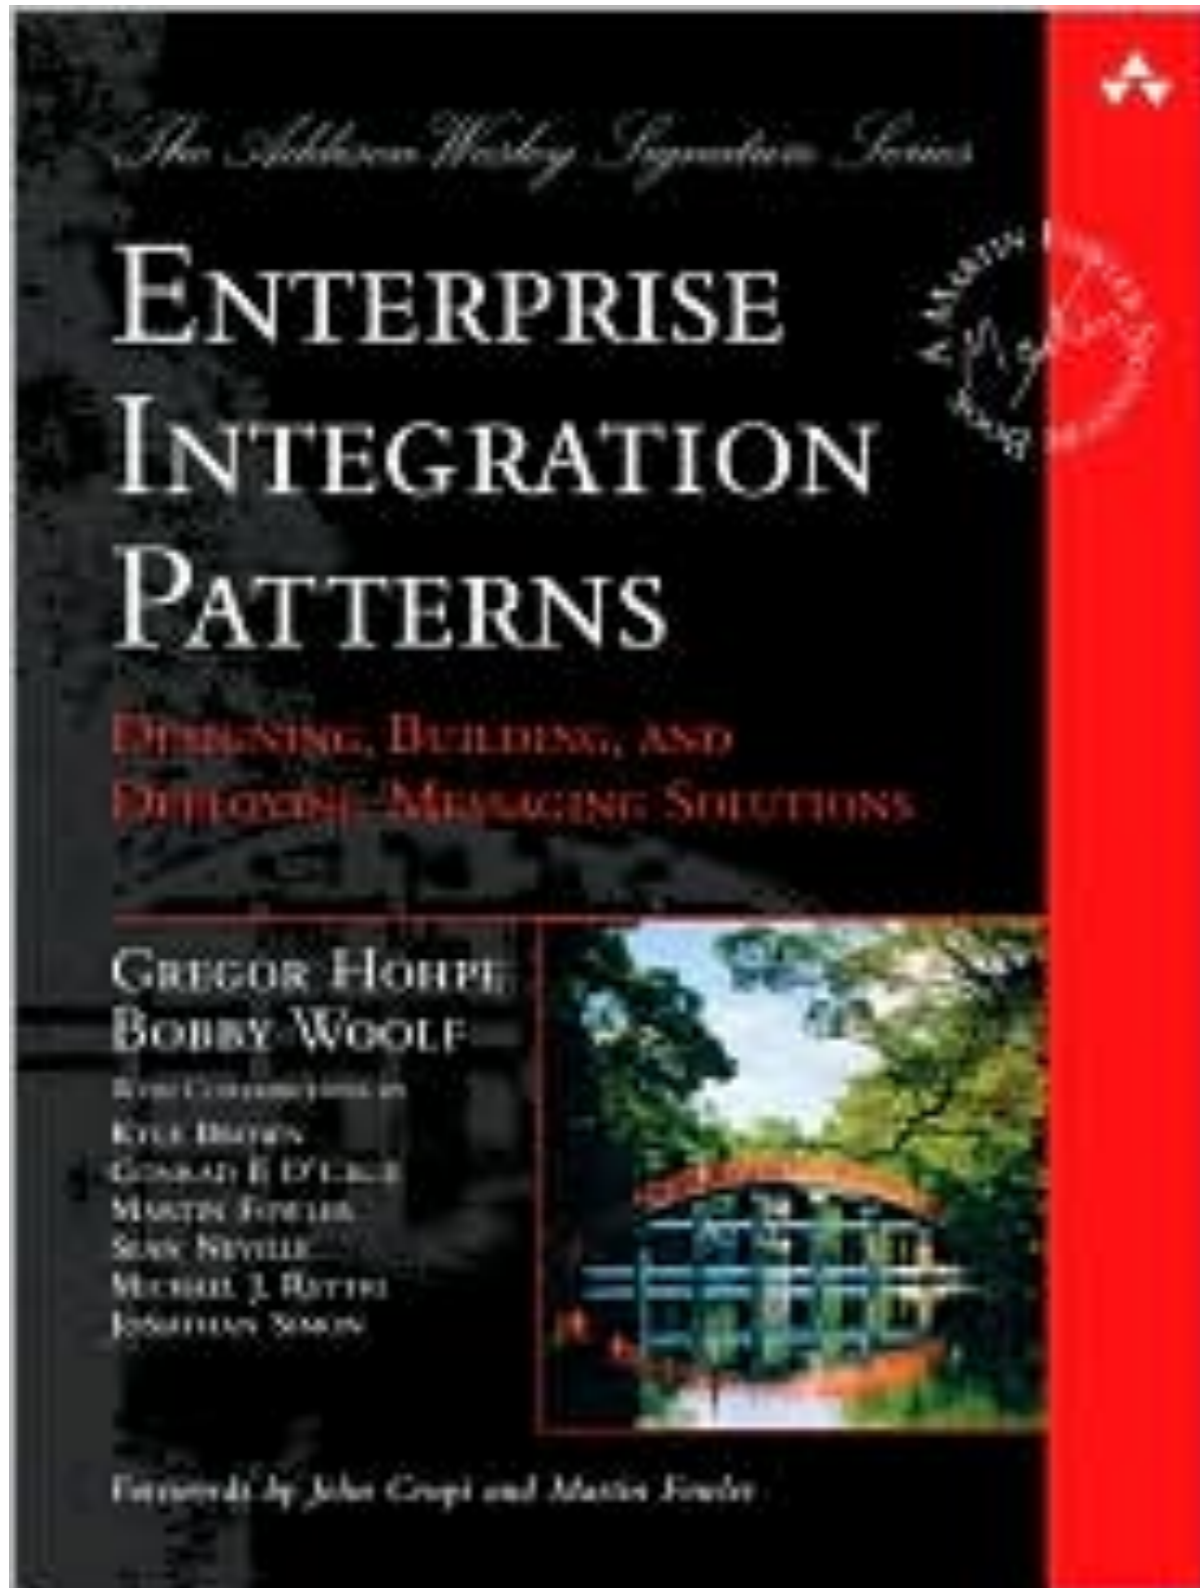

Yet you (the system) remain the same

How do Services Communicate?

How do Services Communicate?

- file transfer
- remote procedure call
- asynchronous messaging
- shared database

a closing thought.

use that quotation that Lucy gave me about inspired design
hindu / buddhist / 'sex'
