

Tiny ERP, the most used open source software for accounting is a mix of simplicity, performance and flexibility.

The accounting module of Tiny ERP provides general, analytic, budgetary accounting and offers all the necessary functionalities for rigorous book-keeping.

It can simply be used as an independant program or totally intergrated to other modules of Tiny ERP for maximum potential.

Accounting surpasses its simple function of reporting to become a genuine process actor of the company in actual term.

## Automation

Most of the entries and functions are completely automated. Decrease data input through automated processes.

## Performance

The client/server structure allows several users to work concurrently.

## Flexibility

Boost your solution by adding specific modules for your business and benefit from the power of a complete ERP. Customize your ERP to your needs.

## Integrated

With Tiny, the accountant becomes a real actor in a company. The integration with other modules places the accountant in the head of the management process.

## Liberty

The free license is a guarantee of no license cost per seat, per user or per year. The source code availability allows you to add the functionalities you want.

**With Tiny ERP become the master of your solutions.**
