

Python & amqp

Why messaging is a good thing
When and how to use it

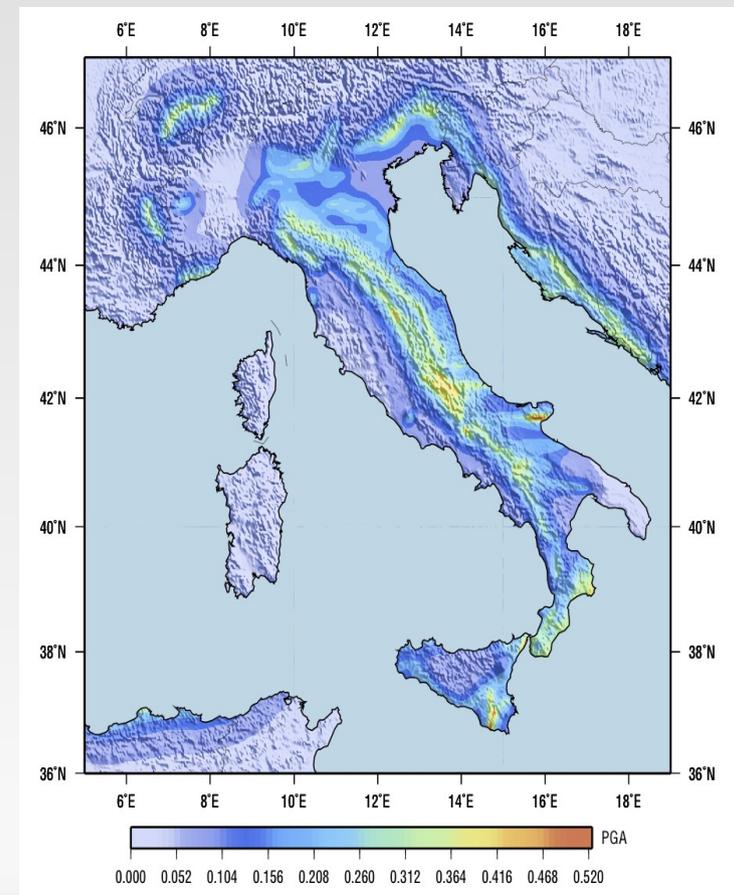

Muharem Hrnjadovic <muharem@openquake.org>

OpenQuake

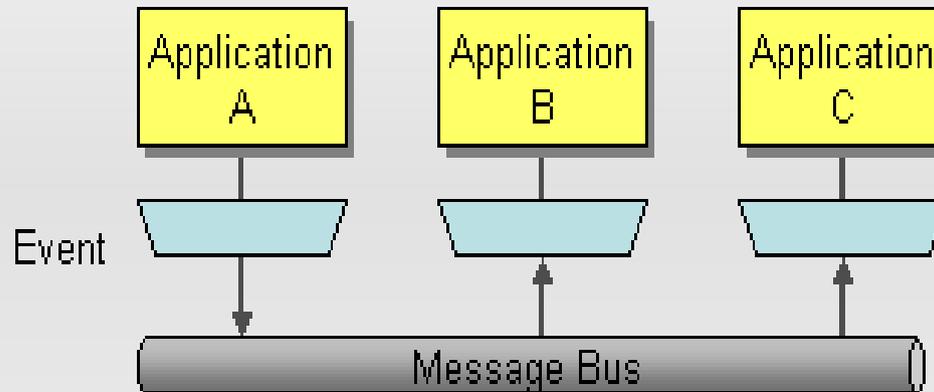

Seismic hazard/risk, socio-economic impact

- Scaling seismic calculations
- Teams based in Zürich/CH and Pavia/Italy
- We are hiring:

jobs@openquake.org

Main ideas

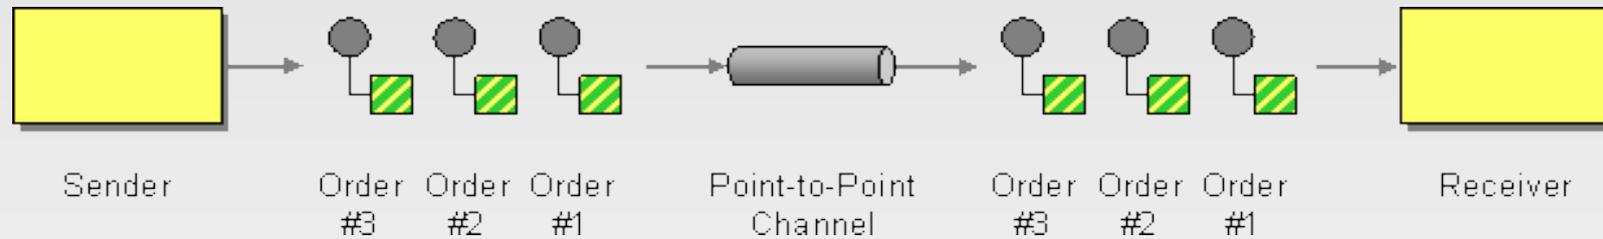

<http://www.eaipatterns.com/Messaging.html>

- Information bus for dynamic systems
 - Point-to-point (Queues)
 - Publish-subscribe (Topics)

Info bus for dynamic systems

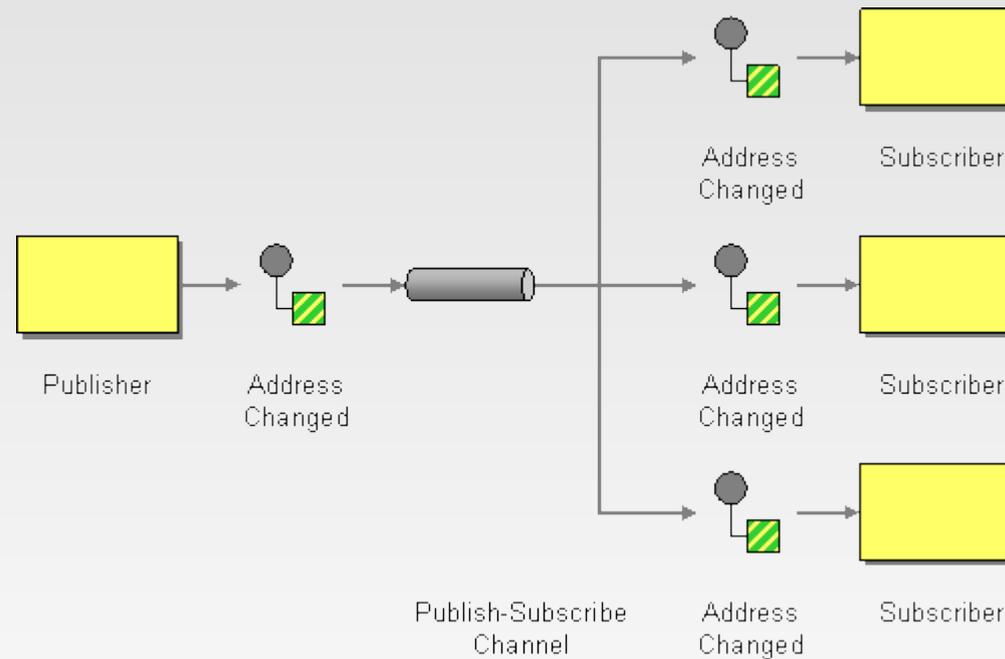

Point to point

<http://www.eaipatterns.com/PointToPointChannel.html>

Info bus for dynamic systems

Publish/subscribe

<http://www.eaipatterns.com/PublishSubscribeChannel.html>

Messaging History

- Work started in the late 80s
- Popular in the financial industry
- But
 - Many proprietary systems (TIBCO, IBM MQseries, MSMQ)
 - Vendor lock-in
- JMS (API definitions)

Today

- AMQP
 - Open standard (like SMTP)
 - Pretty mature at this time
- Free and open source amqp brokers
 - RabbitMQ
 - ZeroMQ
 - qpid

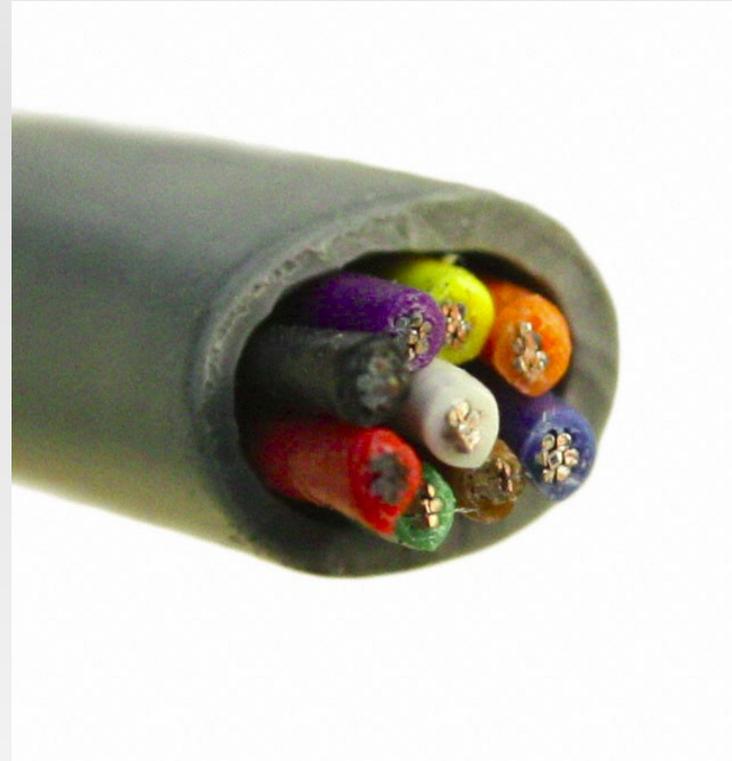

decoupling

scaling

- time/space
- languages
- concerns
- performance
- availability
- deployment
- development
- agility

Connections and channels

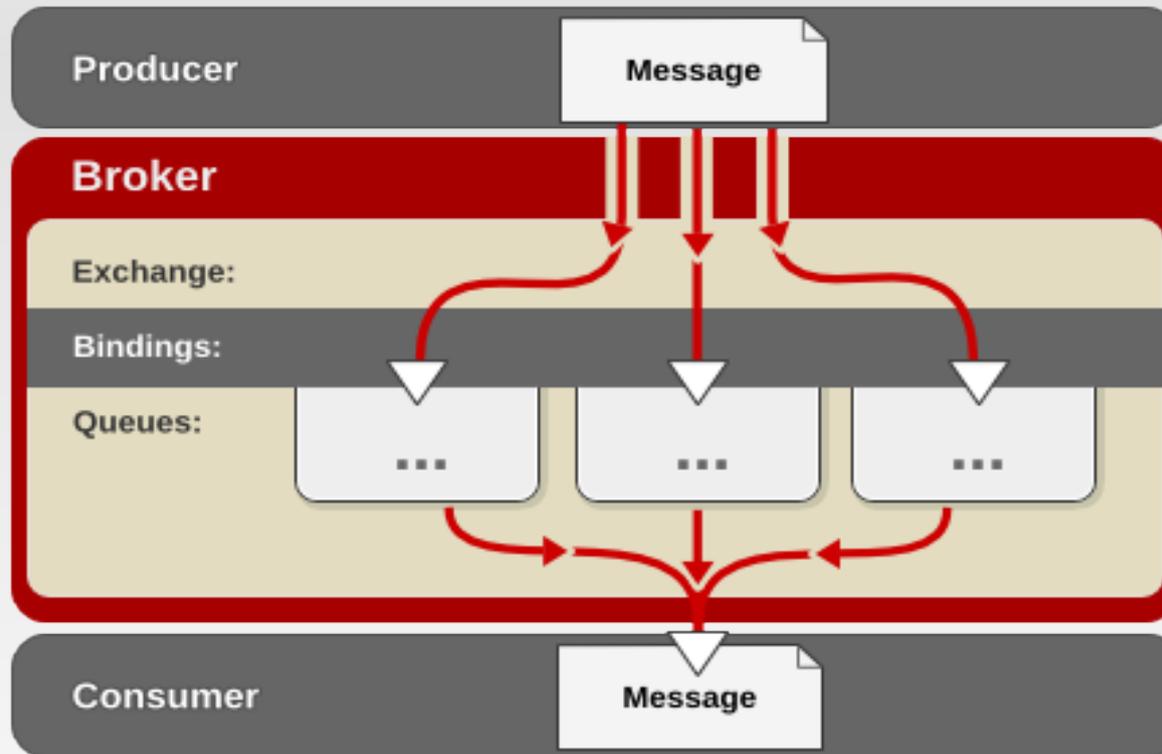

- Single connection to broker
- Multiple channels

<http://media.digikey.com/photos/General%20Cable%20Photos/C4070.41.10.jpg>

Producers and consumers

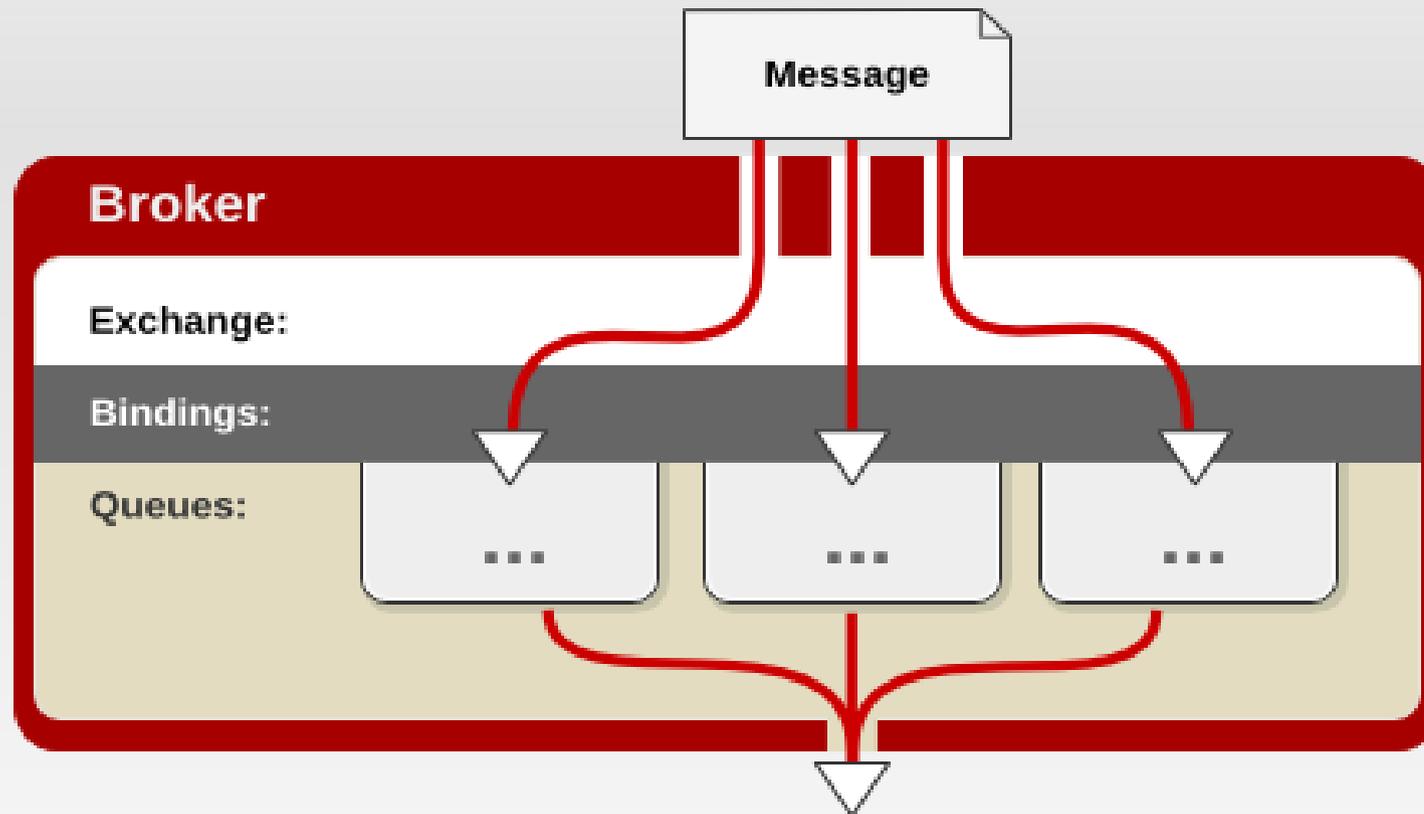

Producer Consumer

Direct exchange

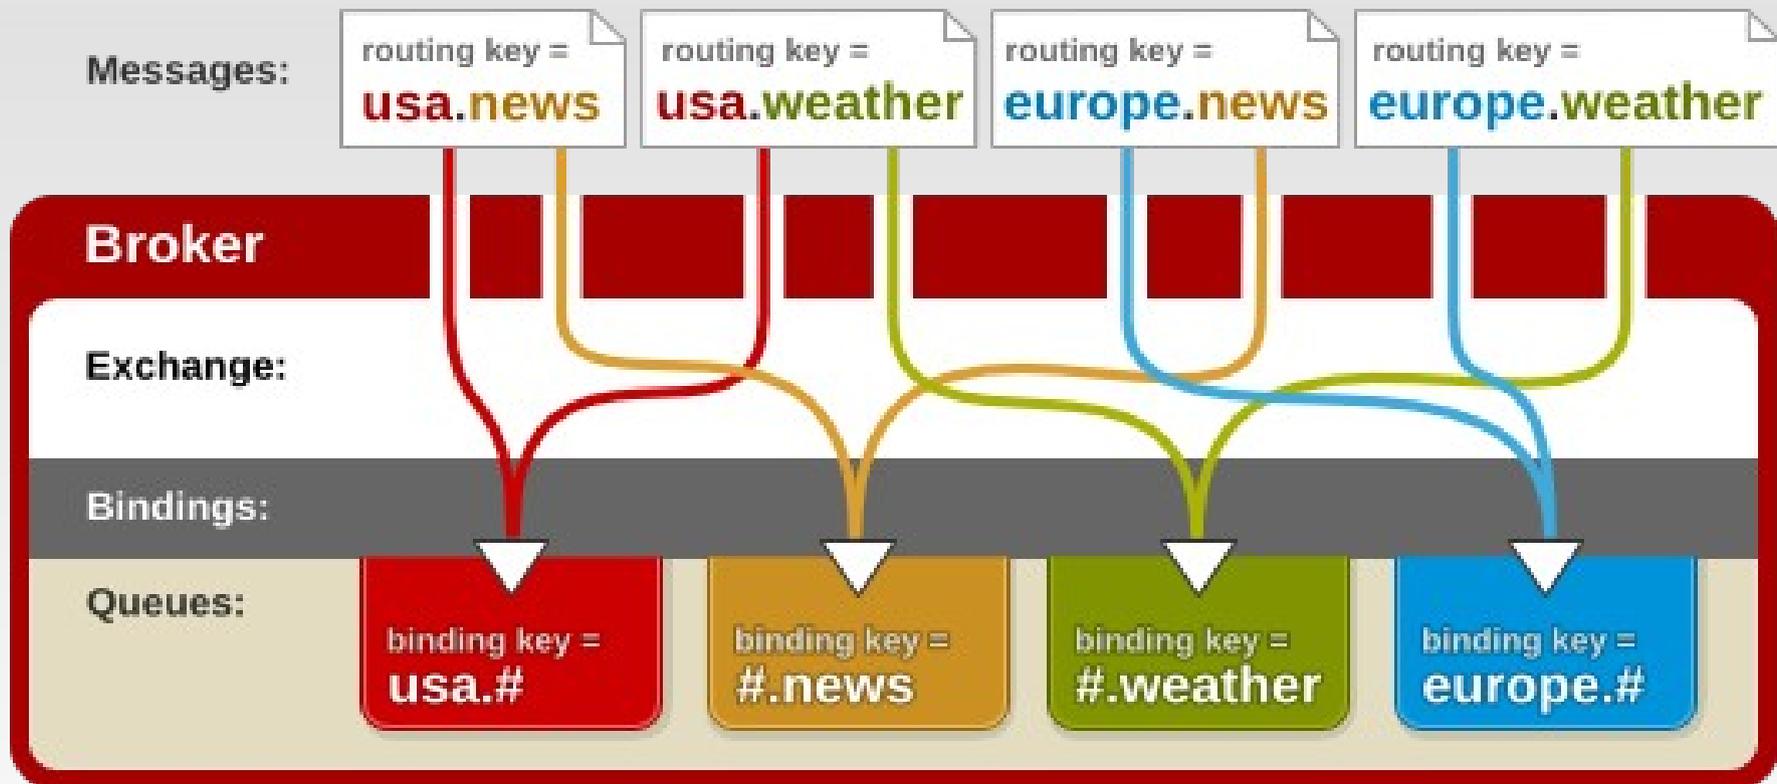

Direct Exchange

http://docs.redhat.com/docs/en-US/Red_Hat_Enterprise_MRG/1.1/html/Messaging_Tutorial/sect-Messaging_Tutorial-Initial_Concepts-Direct_Exchange.html

Topic exchange

Topic Exchange

http://docs.redhat.com/docs/en-US/Red_Hat_Enterprise_MRG/1.1/html/Messaging_Tutorial/sect-Messaging_Tutorial-Initial_Concepts-Topic_Exchange.html

Virtual host (vhost)

- A vhost contains
 - exchanges, queues and bindings
 - authentication & permissions
- Users may be registered with multiple vhosts

<http://matcmadison.edu/files/users/kfoster3/seattle-mail-boxes.jpg>

Are we there yet..?

<http://www.pauldoolan.com/2011/05/running-from-boredom.html>

Surviving a crash/reboot

- Surviving a reboot
 - Exchanges, queues: durable
 - Message delivery mode: persistent
- There is a cost to persisting messages
- Use in moderation

```

Resource management

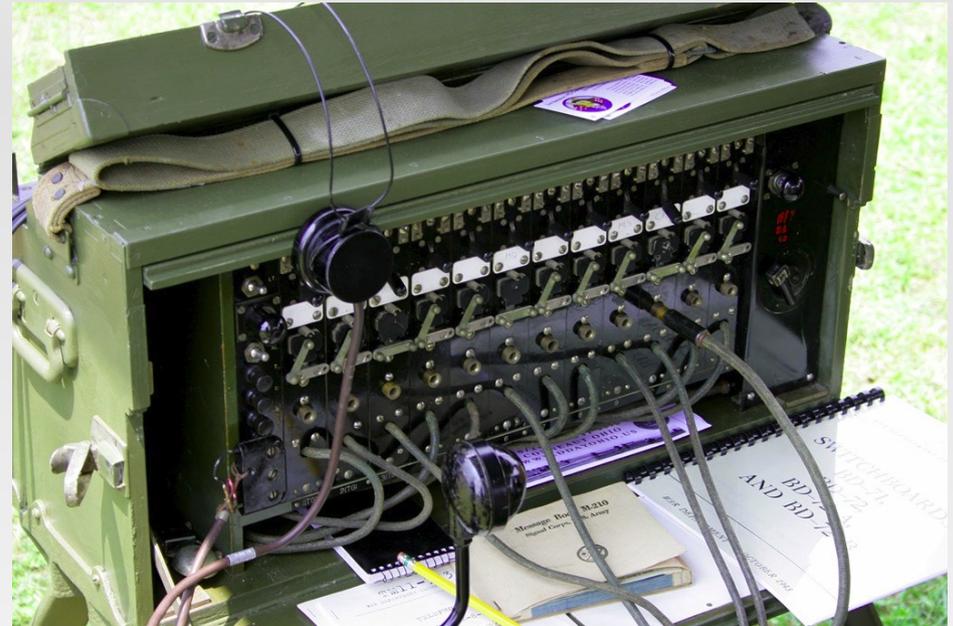

- dynamic configuration of exchanges, queues & bindings
- declaring queues 2x is fine
- check existence by declaring with "passive" flag

<http://www.vibrant.com/images/cables/gameplay-dm-nyc.jpg>

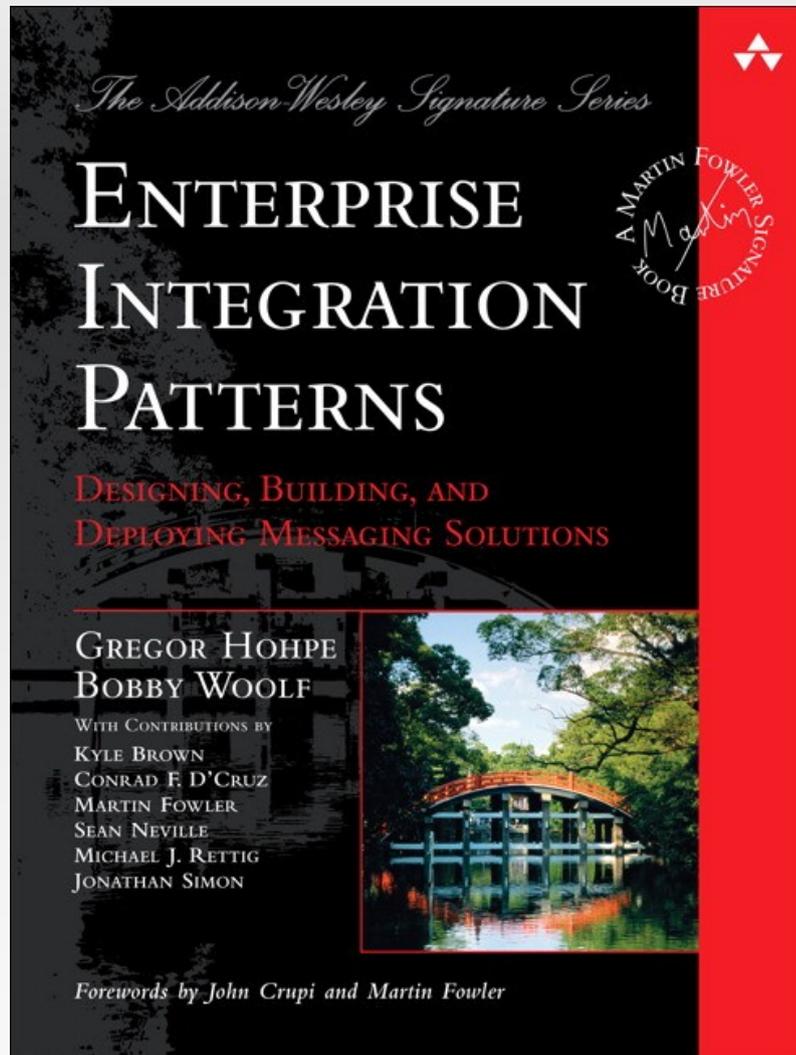

Temporary resources

- temporary exchanges
- temporary queues
e.g. for RPC:
 - Private, auto-delete queues with unique names
 - Queue name in "reply_to" header

<http://www.flickr.com/photos/clearwater88/with/4675557567/>

Patterns!

- Enterprise Integration Patterns
- By Gregor Hohpe, Bobby Woolf
- 736 pages

Wake up! It's code time!!

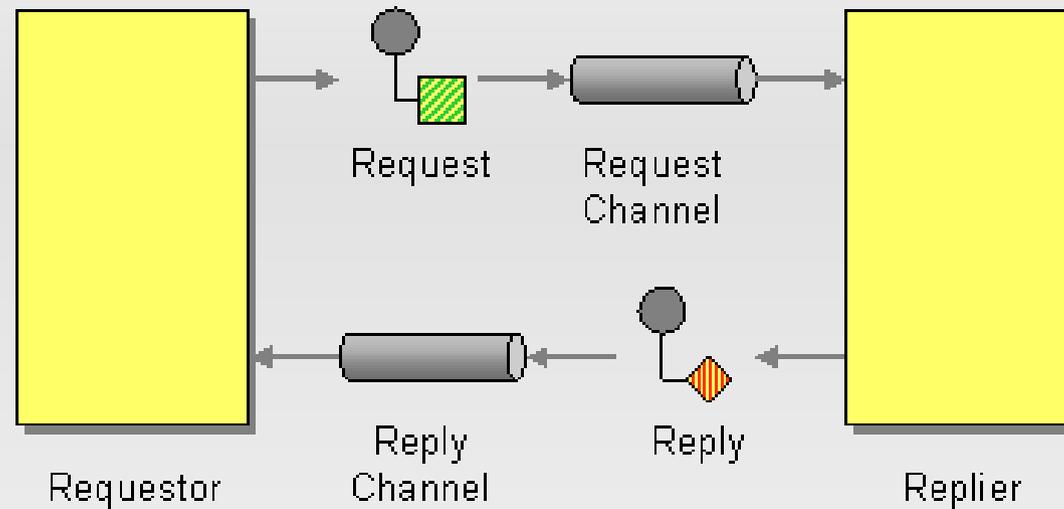

<https://github.com/al-maisan/ep11>

<http://www.toptenz.net/wp-content/uploads/2010/07/wake-up-early.jpg>

1: RPC

<http://www.eaipatterns.com/RequestReply.html>

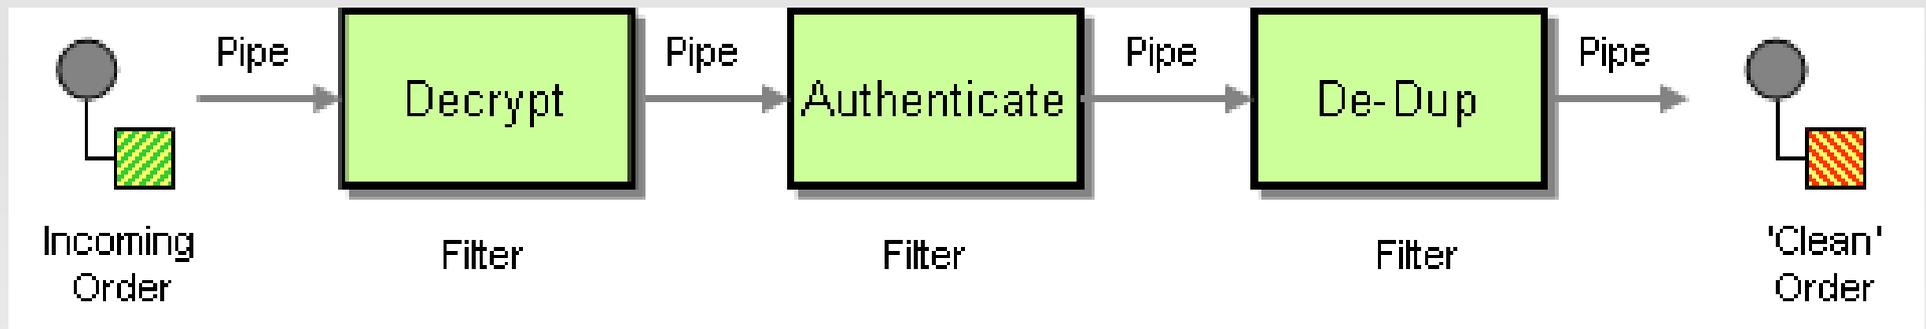

- Private, temporary queue with unique name
- "reply_to" header to enable responses
- round robin of incoming messages
- Correlation ID

Show the \$%*&*^\$ code !!

http://www.ncpc.org/resources/enhancement-assets/clipart-and-stock-art/iStock-000003290557XSmall.jpg/image_preview

2: Pipes and filters

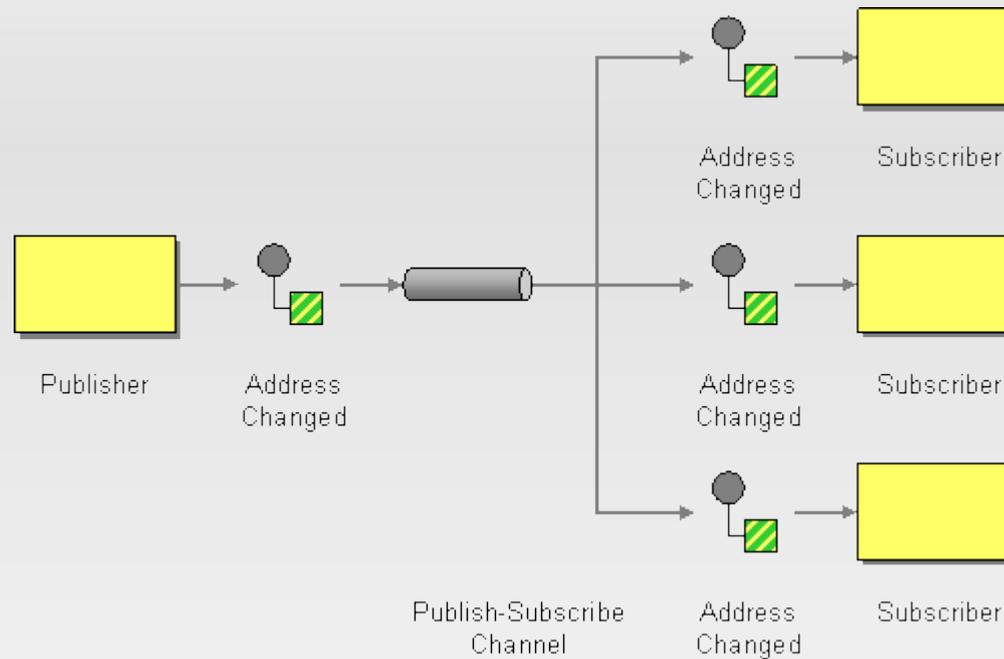

<http://www.eaipatterns.com/PipesAndFilters.html>

- Series of queues
- One queue for failure reports

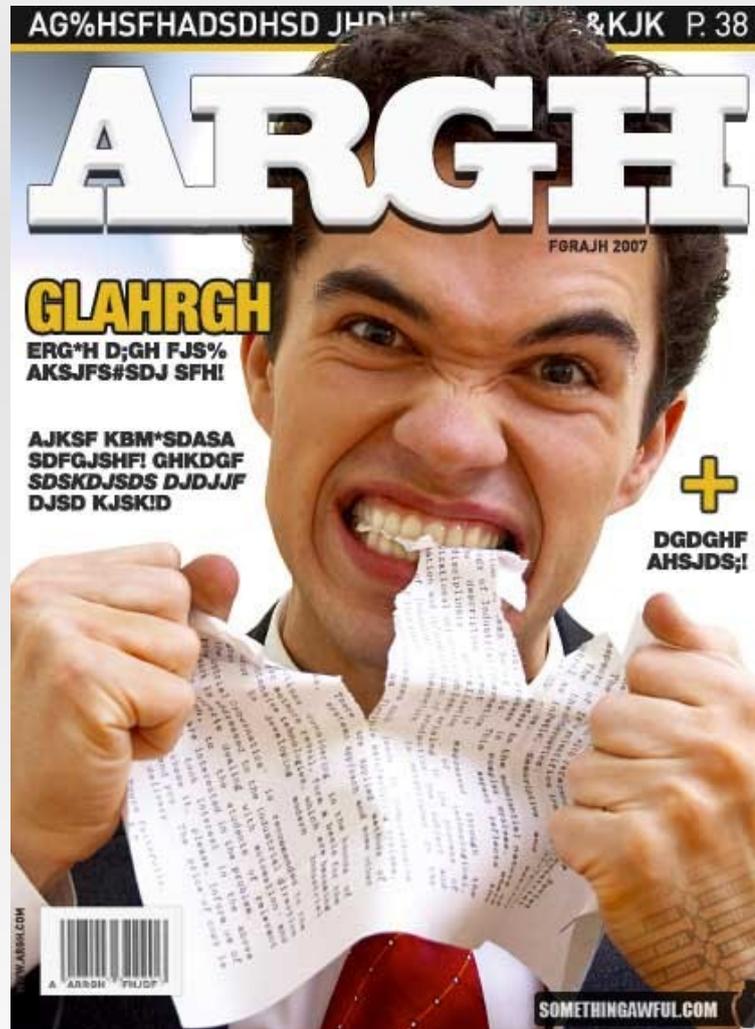

3: Topic exchange

<http://www.eaipatterns.com/PublishSubscribeChannel.html>

- pattern matching on routing keys
 - *.en.#
 - twitter.#
