Agenda

- What is IPA?
- Main values
- Architecture
- Features
- Direction
- Roadmap
- Resources

SUMMIT

WORLD**

PRESENTED BY RED HAT

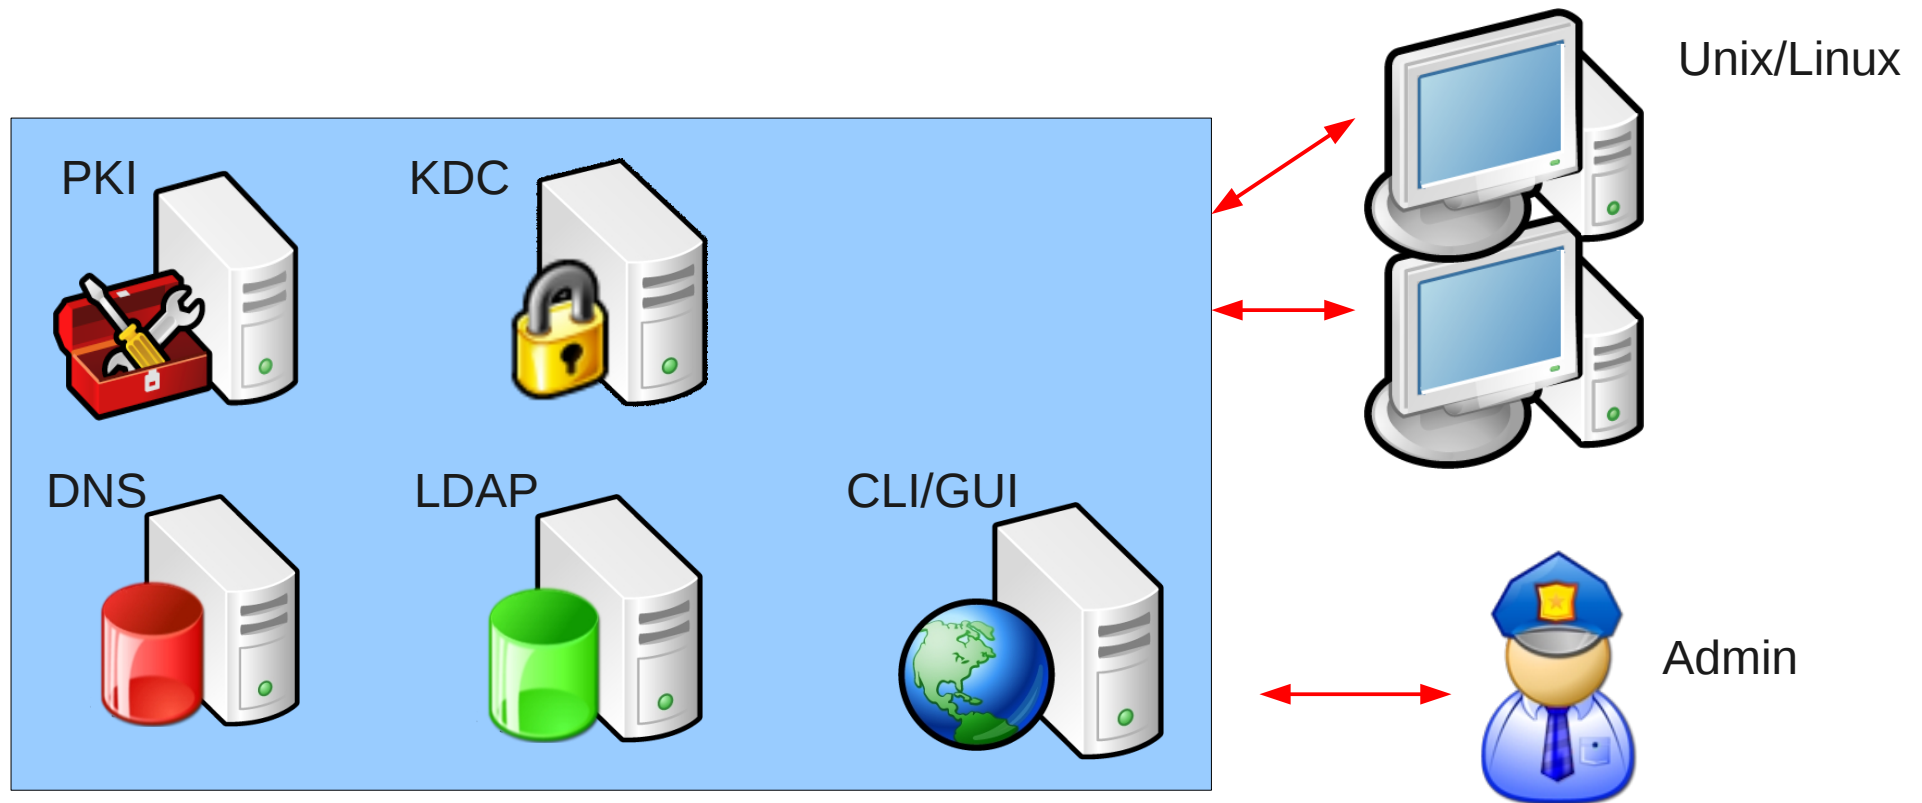

What is IPA?

- IPA stands for Identity, Policy, Audit
 - FreeIPA upstream project was started in 2007
 - FreeIPA v1 was released in 2008
 - Since then worked on the version 2 that was released in late March 2011
- IPA is a domain controller for Linux/UNIX environment
 - Think Active Directory but for Linux
 - Central server that stores identity information, policies related to identities and performs authentication

High Level Architecture

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Why IPA?

- Identity and authentication is a complex problem – many disjoint technologies exist
- We want to make it more simple to deploy and use
- With the growth of the Linux share of servers in the enterprises there should be a server that has needs of Linux clients in its heart

Why IPA? (continued)

- Cloud based deployments require even more security:
 - Flexible identity and policy management
 - Authentication and single sign on
 - Certificate and key provisioning and rotation

Features

- Centralized authentication via Kerberos or LDAP
- Identity management:
 - users, groups, hosts, host groups, netgroups, services
 - Integrated identities
- Manageability:
 - Pluggable and extensible framework for UI/CLI
 - Rich CLI and web-based user interface
 - Simple installation scripts for server and client
 - Flexible delegation and administrative model

SUMMIT

WORLD**

PRESENTED BY RED HAT

Features (Continued)

- Certificate provisioning for hosts and services
- Serving sets of automount maps to different clients
- Advanced features:
 - Host-based access control
 - Centrally-managed SUDO
 - Group-based password policies
 - Automatic management of private groups
 - Can act as NIS server for legacy systems
 - Painless password migration

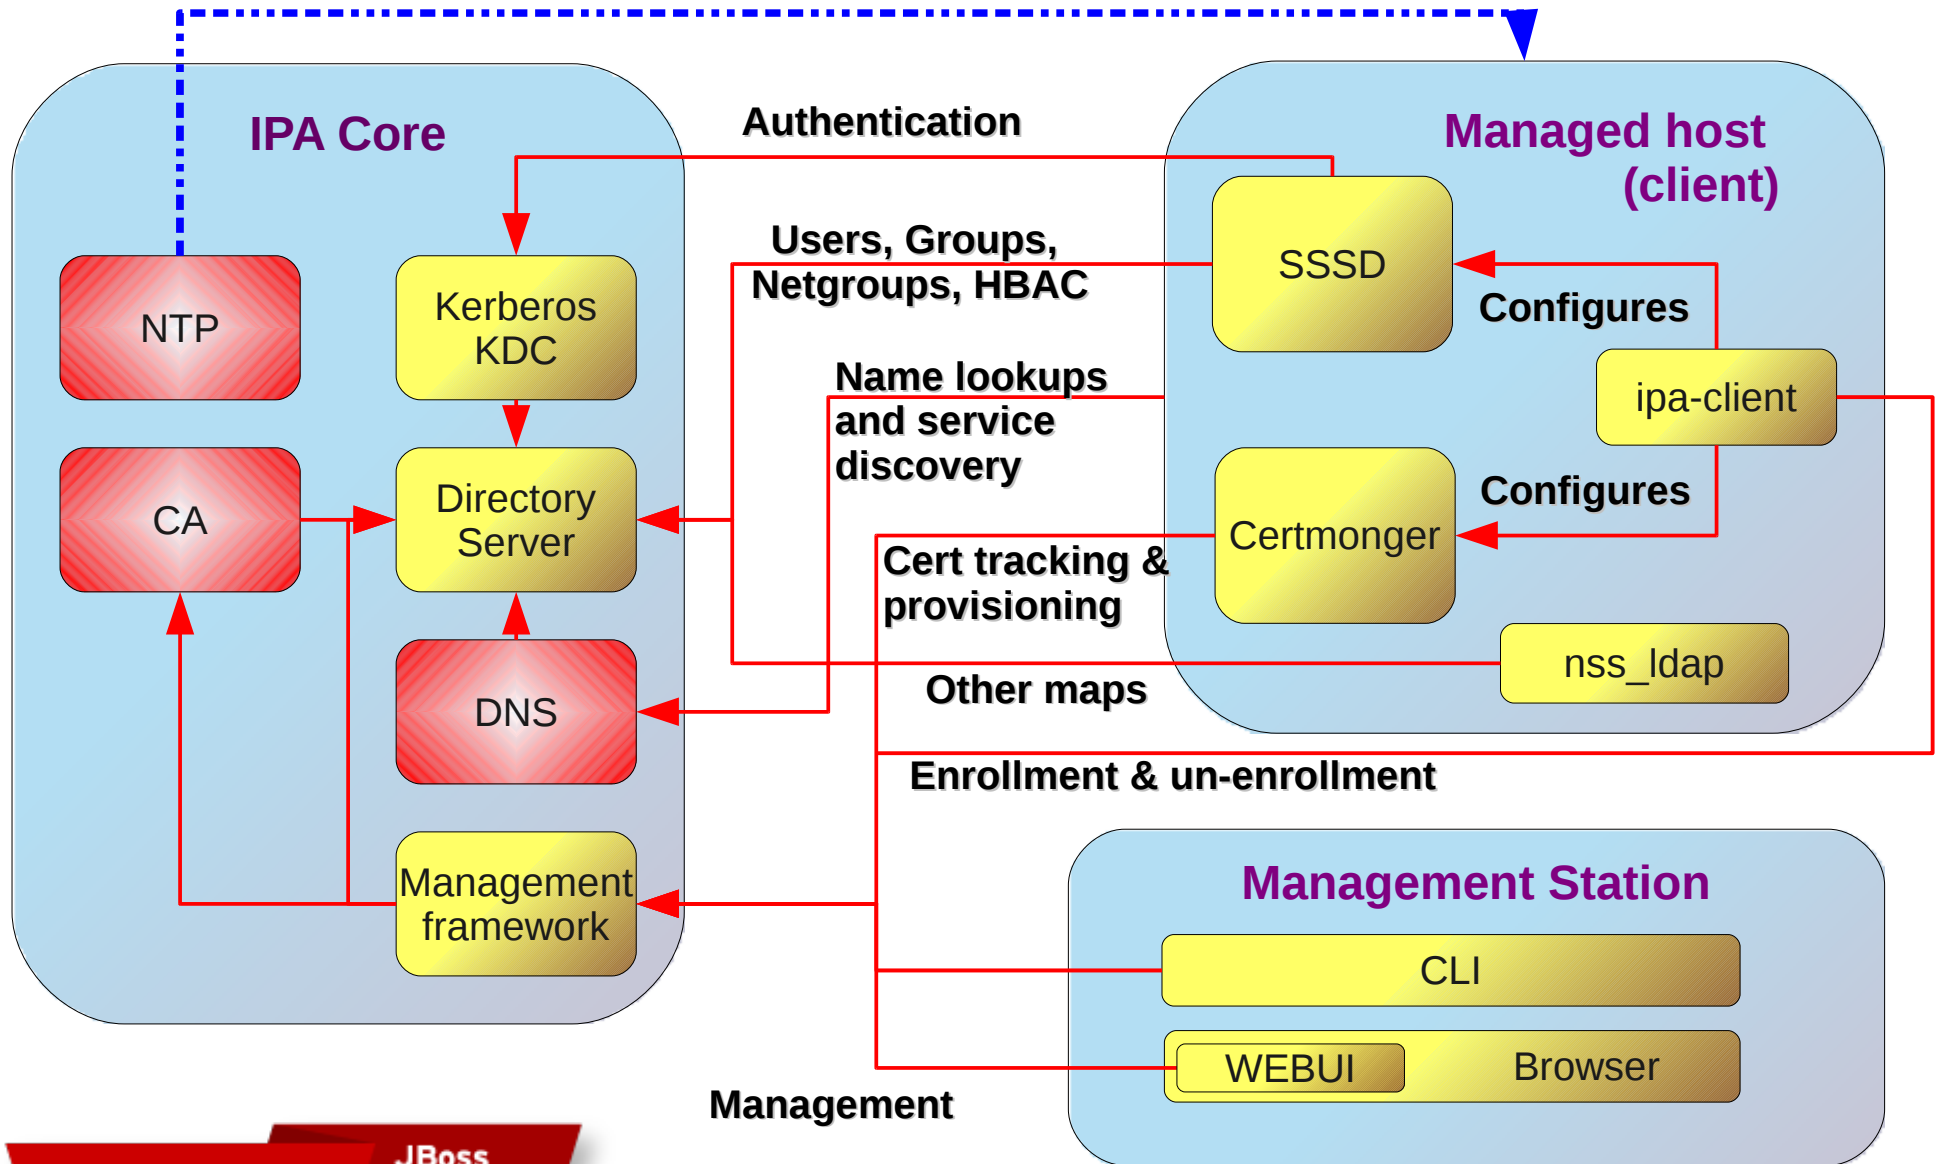

Features (Continued)

- Optional integrated DNS server managed by IPA
- Replication:
 - Supports multi-server deployment based on the multi-master replication
 - User replication with MS Active Directory
- Compatibility with broad set of clients

Client Configurations

- SSSD
 - With IPA back end
 - LDAP or Proxy for identity
 - Kerberos or LDAP for authentication
 - nss_ldap for other maps
 - nscd only for those maps
- Non-SSSD
 - LDAP (nss_ldap) or NIS (nss_nis) for identity
 - LDAP (pam_ldap) or Kerberos (pam_krb5) for auth

Direction

- Bug fixing and cleanup
- UI improvements
- SELinux contexts, SSH key management
- Cross Kerberos trusts
- Native two factor authentication
- More certificate system integration
- Policies as needed
- RADIUS

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Roadmap

- FreeIPA 2.0 -> Red Hat Enterprise Linux 6.1 tech preview
- FreeIPA 2.1 (bug fixing/UI improvements) -> Red Hat Enterprise Linux 6.2 full support
- FreeIPA 2.2/3.0 (SELinux/SSH key management/Cross Kerberos trusts) -> 2012 Red Hat Enterprise Linux releases
