Stanbol Enhancement Structure

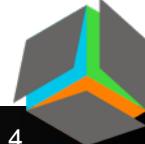

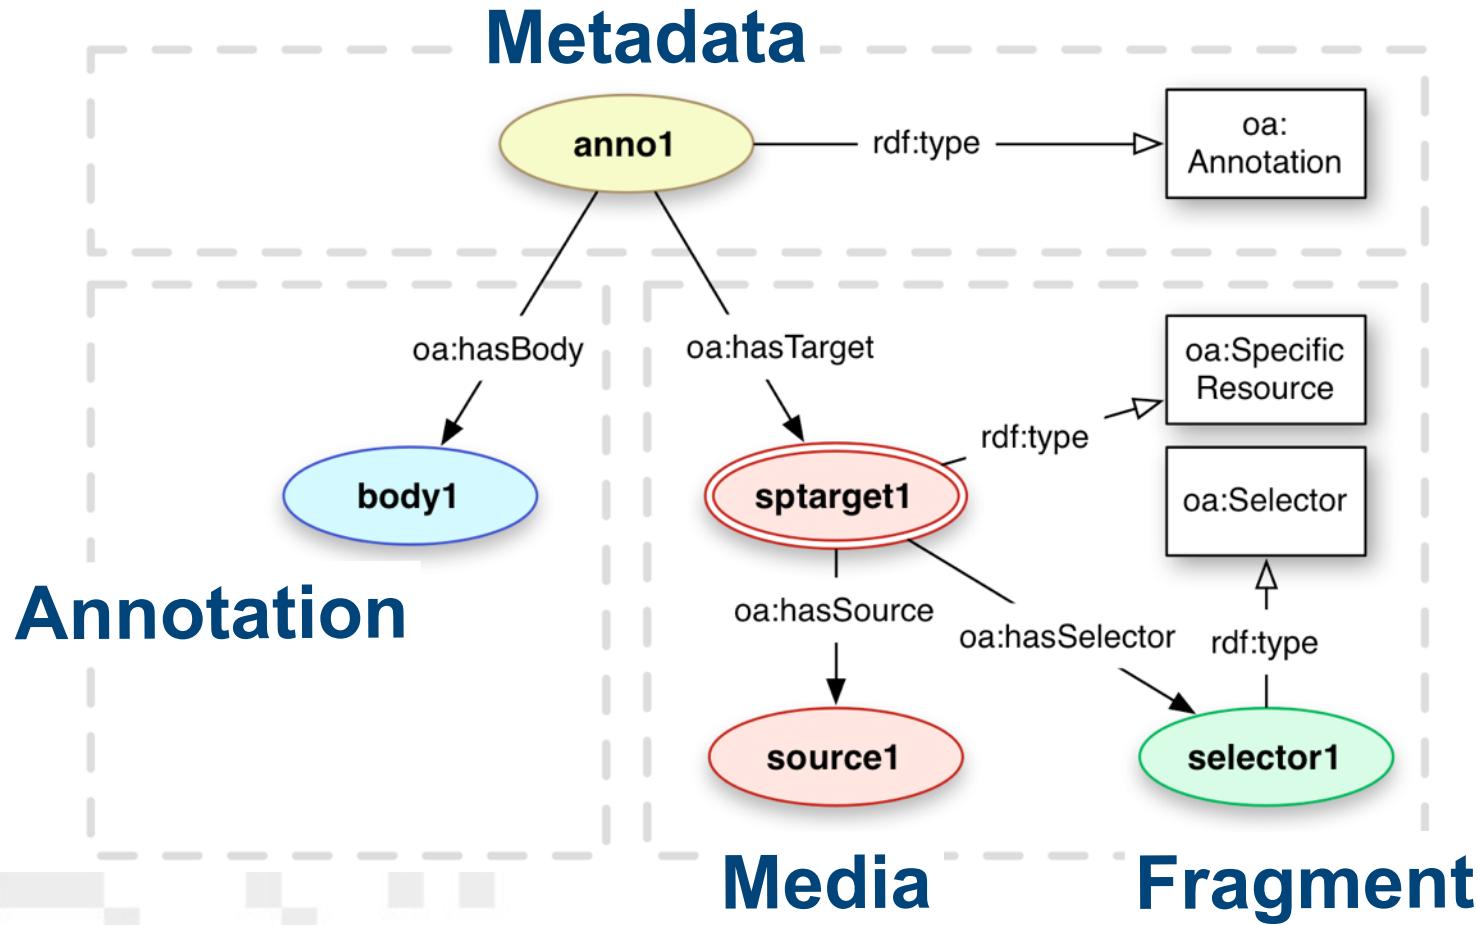

Apache Stanbol can detect famous entities such as

Mention

Paris or Bob Marley!

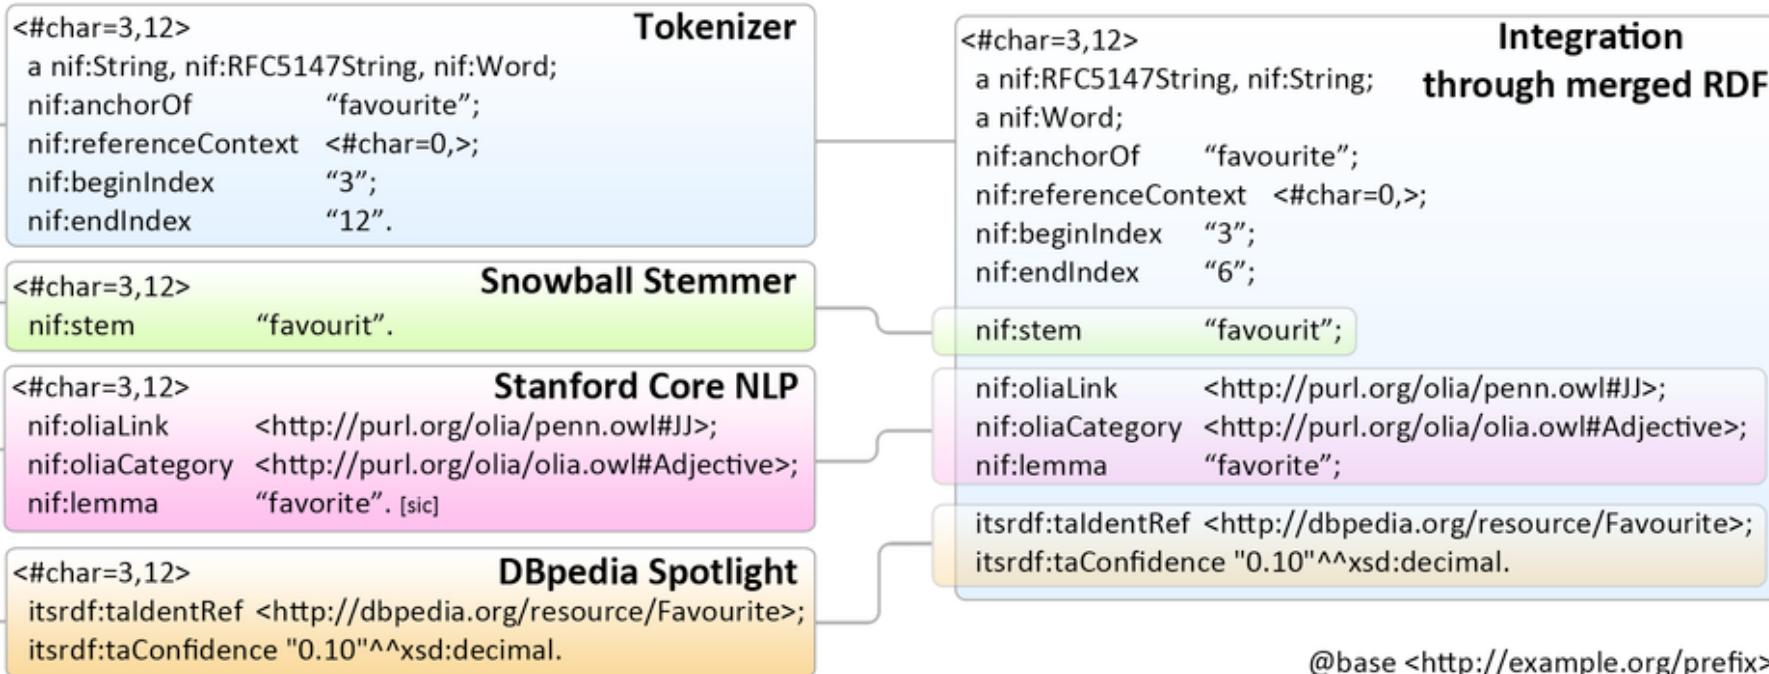

Open Annotation

NLP Interchange Format (NIF)

“My **favourite** actress is Natalie Portman.”

Everything

NIF Core Facts

- URI Scheme to generate Media Fragment URI's
 - <http://www.example.org/expl.txt#char=3,12>
 - allows to automatically integrate information from different Components
- Efficient Annotation Scheme
 - even suitable for word level annotations
 - selections can be encoded in the URI
 - reasoning can be used to reduce triple count
- OLiA - Ontologies of Linguistic Annotation
 - supports 34 Annotation Models and 69 Languages

Fusepool Annotation Model (1/2)

Combines

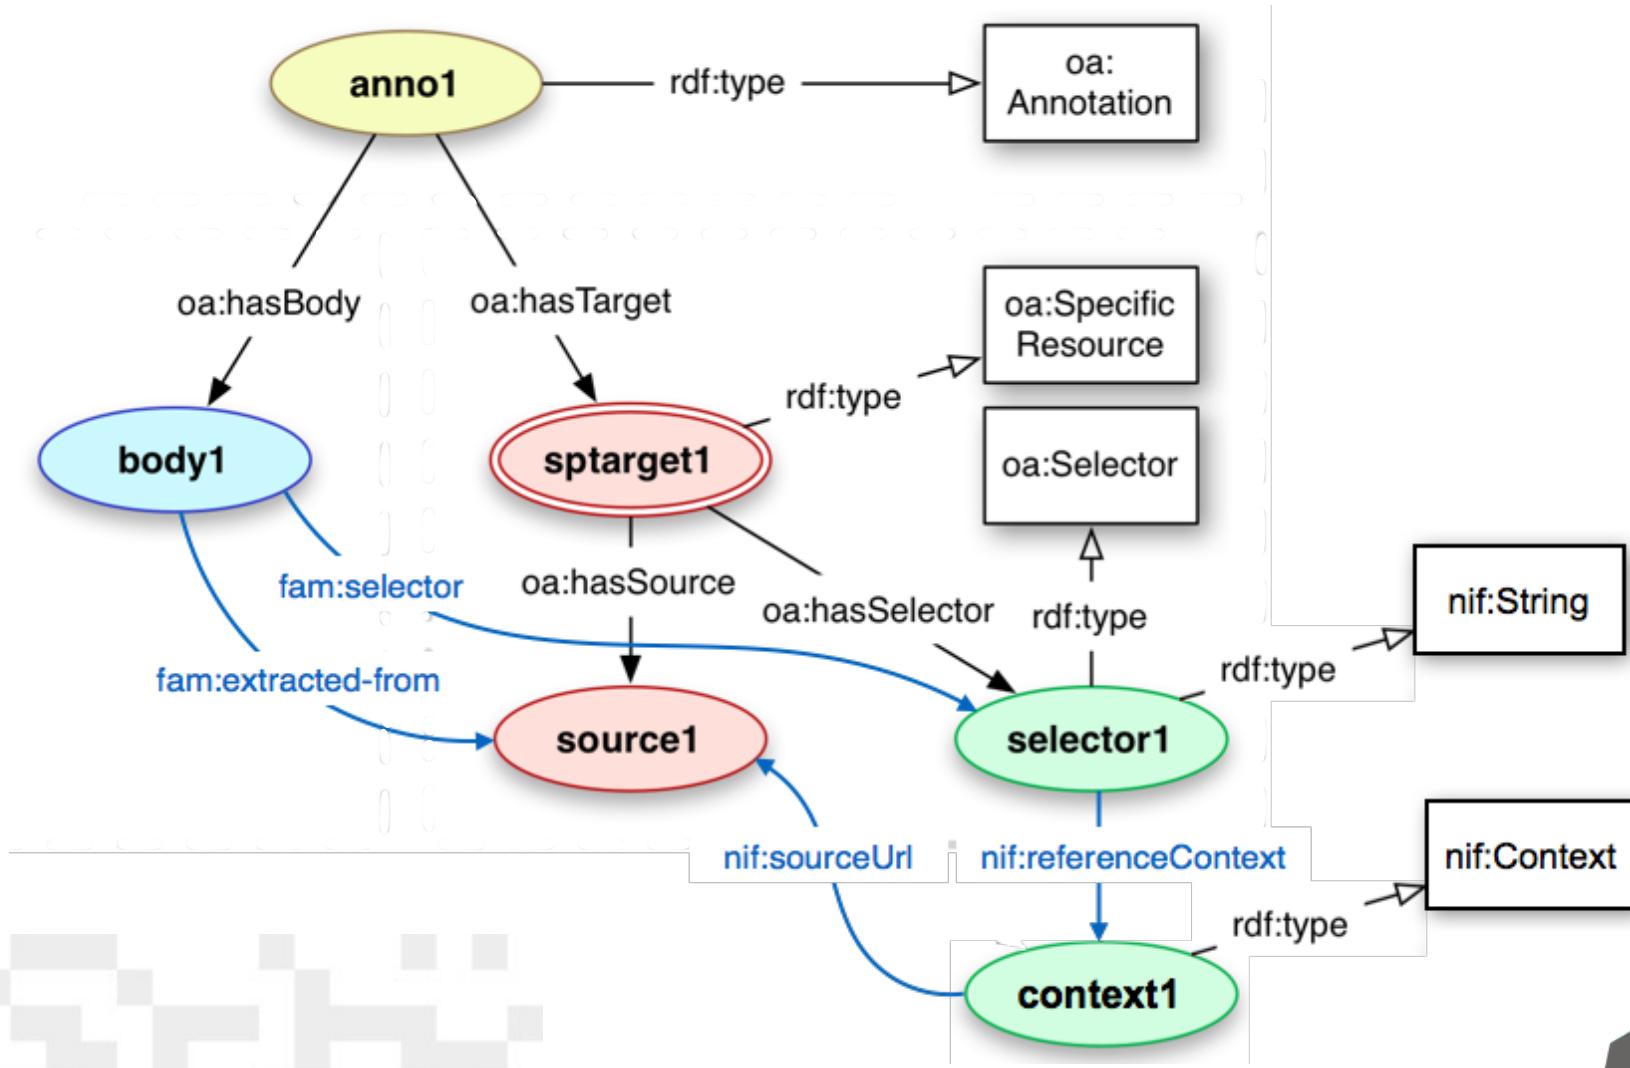

- Open Annotation ... as core annotation structure
- NIF ... to represent lower level NLP results (optional)

Extended with

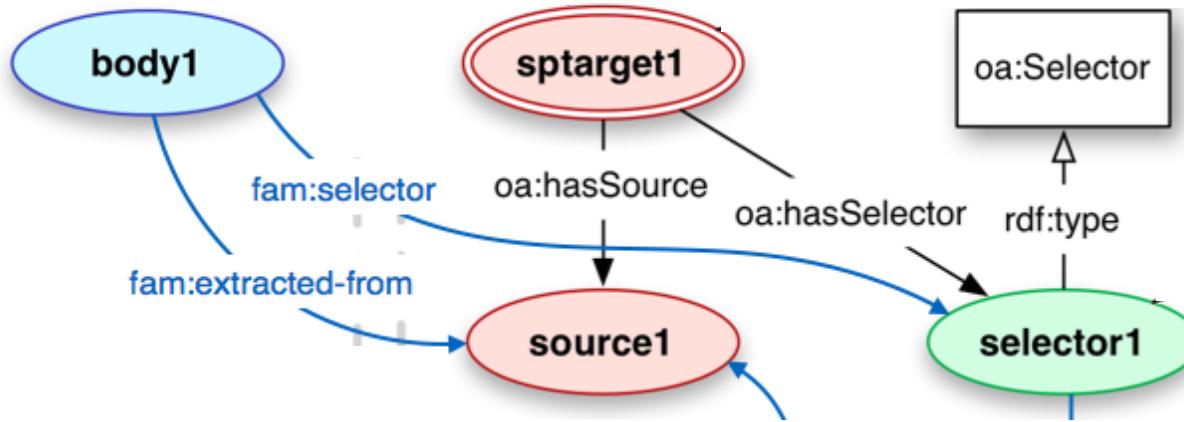

- Stanbol Enhancement Structure inspired Annotation Bodies ... for high level annotations
- Shortcuts for Media centric Annotation processing

Fusepool Annotation Model (2/2)

Media Centric Annotation Processing

PREFIX oa: <<http://www.w3.org/ns/oa#>>

PREFIX fam: <<http://vocab.fusepool.info/fam#>>

```
SELECT ?body ?source ?selector  
WHERE {  
    ?body a {annotation-type} ;  
          fam:extracted-from ?source ;  
          fam:selector ?selector .  
}
```

Language Annotation

- Annotates the language of the Content

```
@prefix ex: <urn:fam-example:> .  
@prefix oa: <http://www.w3.org/ns/oa#> .  
@prefix fam: <http://vocab.fusepool.info/fam#> .  
@prefix nif: <http://persistence.uni-leipzig.org/nlp2rdf/ontologies/nif-core#> .
```

```
ex:lang-anno-1 a fam:LanguageAnnotation ;  
    dct:language "en";  
    fam:confidence "0.9998"^^xsd:double ;
```

Entity Mention Annotation

- Annotates Named Entities mentioned in the Text
 - e.g from Named Entity Recognition (NER) Tools

```
ex:ent-ment-anno-1 a fam:EntityMention ;
  fam:entity-type dbo:Place;
  fam:entity-mention "Salzburg"@en
  fam:confidence "0.876"^^xsd;double ;
  fam:selector <http://www.example.com/example.txt#char=20,27> ;
  fam:extracted-from <http://www.example.com/example.txt> .

<http://www.example.com/example.txt#char=20,27>
  a fam:NifSelector, nif:String ;
  nif:referenceContext
    <http://www.example.com/example.txt#char=0>
  nif:beginIndex "20"^^xsd:int ;
  nif:endIndex "27"^^xsd:int .
```

Entity Annotation

- Annotates an Entity related to the Text
 - Entities do have an URI and are managed by Vocabularies

```
ex:keyword-anno-1 a fam:EntityAnnotation ;  
    fam:entity-reference dbr:Wolfgang_Amadeus_Mozart ;  
    fam:entity-type dbo:Person;  
    fam:entity-label "Wolfgang Amadeus Mozart"@en ;  
    fam:confidence "0.789"^^xsd;double ;  
    fam:extracted-from <http://www.example.com/example.txt> .
```

- Entity Annotations do not define the mention(s) of the Entity in the Text.

Linked Entity Annotation

- Combines an Entity Mention with a Linked Entity
 - Links an mention in the Text with an Entity as defined by a Vocabulary.

```
ex:linked-entity-anno-1
  a fam:LinkedEntity, fam:EntityMention, fam:EnttiyAnnotation ;
    fam:entity-reference dbr:Salzburg ;
    fam:entity-type dbo:Place;
    fam:entity-mention "Salzuburg"@en ;
    fam:entity-label "Salzburg"@en ;
    fam:confidence "0.893"^^xsd;double ;
    fam:selector <http://www.example.com/example.txt#char=20,27> ;
    fam:extracted-from <http://www.example.com/example.txt> .
```

Entity Suggestion

■ Suggest multiple Entities for a Mention

```
ex:entity-linking-choice-anno-1 a fam:EntityLinkingChoice ;
    fam:entity-mention "Salzburg"@en ;
    oa:item ex:entity-suggestion-1, ex:entity-suggestion-2 .
    fam:selector <http://www.example.com/example.txt#char=20,27> ;
    fam:extracted-from <http://www.example.com/example.txt> .

ex:entity-suggestion-1 a fam:EntitySuggestion;
    fam:entity-reference dbr:Salzburg ;
    fam:entity-label "Salzburg"@en ;
    fam:entity-type dbo:Place ;
    fam:confidence "0.973"^^xsd:double ;
    fam:extracted-from <http://www.example.com/example.txt> .

ex:entity-suggestion-2 a fam:EntitySuggestion;
    fam:entity-reference dbr:Salzburg_(state) ;
    fam:entity-label "Salzburg"@en ;
    fam:entity-type dbo:Place ;
    fam:confidence "0.573"^^xsd:double ;
    fam:extracted-from <http://www.example.com/example.txt> .
```

Topic Classification

- Classifies a Content along multiple Categories

```
ex:topic-classification-anno-1 a fam:TopicClassification ;  
    fam:classification-scheme my:ConceptScheme ;  
    oa:item ex:topic-anno-1, ex:topic-anno-2 .  
    fam:selector <http://www.example.com/example.txt#char=0> ;  
    fam:extracted-from <http://www.example.com/example.txt> .
```

```
ex:ex:topic-anno-1 a fam:TopicAnnotation;  
    fam:topic-reference my:ClassicalComposers ;  
    fam:topic-label "Classical Composers"@en ;  
    fam:confidence "0.872"^^xsd:double.  
    fam:extracted-from <http://www.example.com/example.txt> .
```

```
ex:topic-anno-2 a fam:TopicAnnotation;  
    fam:topic-reference my:Austria ;  
    fam:topic-label "Salzburg"@en ;  
    fam:confidence "0.743"^^xsd:double.  
    fam:extracted-from <http://www.example.com/example.txt> .
```

Stanbol Enhancer Support

- **NIF 2.0 Transformation Engine [1]**

- part of the `org.apache.stanbol.enhancer.engines.nlp2rdf` module
- version: `>= 0.12.1` and `1.0.0-SNAPSHOT`
- serializes the Analyzed Text Content Part as NIF 2.0

- **FISE to FAM Converter Engine [2]**

- provided by the `eu.fusepool.p3.stanbol-engines-fise2fam:stanbol-engines-fise2fam` module
- version: `1.0.0`
- converts the RDF of the Stanbol Enhancement Structure to the FAM

[1] <http://stanbol.apache.org/docs/trunk/components/enhancer/engines/nif20>

[2] <https://github.com/fusepoolP3/p3-stanbol-engine-fam>

Demo Setup (1/2)

■ Analysis Chain configuration

- **openNLP™** for NLP Annotations
 - DBpedia Linking using  **MachineLinking** [1]
 - NIF 2.0 Engine
 - Text Annotation New Model Engine
 - for prefix/suffix information of Selectors
 - FISE 2 FAM Engine
- apachecon-demo chain
- **langdetect** (`required`, `LanguageDetectionEngine`)
 - **opennlp-sentence** (`required`, `OpenNlpSentenceDetector`)
 - **opennlp-token** (`required`, `OpenNlpTokenize`)
 - **opennlp-pos** (`required`, `OpenNlpPosTagger`)
 - **machinelinkingAnnotate** (`required`, `MachinelinkingAnnotate`)
 - **text-annotation-new-model** (`required`, `TextAnnotationNewModel`)
 - **fise2fam** (`required`, `Fise2FamEngine`)

[1] <https://github.com/michelemostarda/machinelinking-stanbol-enhancement-engine>

Demo Setup (2/2)

- Query Enhancement Results
 - Apache  as RDF Triple Store
 - Marmotta and SPARQL Endpoint
- Squebi as SPARQL editor [1]
- Demo Data
 - 6 English, 4 German, 4 Italian, 4 French and 4 Spanish news articles about Ebola

[1] <https://github.com/tkurz/squebi>

```
Texas healthcare workers at risk of Ebola asked to stay out of public
Seventy-five staff members of Dallas hospital asked to sign 'binding legal order' that states they will avoid public spaces
Healthcare workers deemed to be at risk of contracting Ebola after dealing with a patient who died from the virus in Texas are being asked
to sign voluntary agreements to stay away from the public, after Dallas authorities decided against declaring a state of emergency.
Seventy-five staff members from Texas Health Presbyterian hospital are being given a "binding legal document and order" that states they
will avoid public transport, not go to areas where large numbers of people congregate, and continue to be monitored twice a day for
symptoms, county judge Clay Jenkins said on Thursday.
Any of those involved in the care of Thomas Eric Duncan who refuse to sign the agreement would be subject to a legal control order,
Jenkins told reporters after a meeting of the county commissioners court in downtown Dallas. "All the remedies of the law are available," he
said. However he said he believed this would not be necessary. "These are hometown healthcare heroes," he said. "They're not going to
jail."
```
