The Apache Way

A collaborative slide deck with
contributions from `{ASF_MEMBERS}`

(in particular **Ross Gardler, Justin Erenkretz, Isabel Drost and Lars Eilebrecht**)

What is the Apache Way?

APACHE CON
EUROPE

What will we try to cover?

- How the foundation works
 - How we develop code
 - What we have found that works
 - And what hasn't worked so well...
 - Business and Apache
-
- From myself, and the other members in the audience!

But first, some history!

APACHECON
EUROPE

Informal Collaboration (1995)

- Apache Group
 - 8 people
 - Sharing code on the abandoned NCSA httpd
- Apache web server releases
 - 0.6.2 (first public release) – April 1995
 - 1.0 release – 1st December 1995

A Foundation (1999)

- Commercial opportunities
 - Formal legal structure required
- Membership based charity
 - IRS 501(c)3
 - Donations by individuals tax-deductible (in the US)
- Virtual world-wide organisation
- First ApacheCon – March 2000
 - Apache 2.0 Alpha 1 released then
- First European ApacheCon – October 2000

Today

- Hundreds of projects
 - Small libraries
 - Critical infrastructure
 - End user tools
- Well defined project governance
- Formal Mentoring
- Accelerating growth

The ASF, By Numbers

- Projects = 154
- Incubating Projects = 33
- Board / President Committess = 9
- Board Members = 9
- Foundation Members = ~600
- PMC Committee Members = ~2100
- Committers = ~4100
- ICLAS = ~6500

Foundation Structure

APACHE CON
EUROPE

A white feather graphic is positioned behind the text 'APACHE CON' and 'EUROPE', extending from the right side of the text towards the left.

One way to view it

Another way

- A number of projects
- Each project is responsible for their own code, community and direction
- Board provides oversight, but that's it
- Board has no say on what code gets written, nor what direction projects take, nor what projects we should start. All of that is devolved to the projects themselves
- Foundation has some common support (eg infra, press, trademarks), to help projects focus on their code and on their communities

Apache Labs

Apache Incubator

Top Level Projects

RIP

Apache Attic

Not all “Plain Sailing”

- Jakarta “Foundation”
 - Jakarta was an “Umbrella” for all Java projects
 - Successful brand in its own right
- Tomcat, Struts, Ant, and many more innovations
- Started to copy the foundation structure
 - “Mini”-board... but problems arose...
 - Avalon – Who was responsible?

Importance of Oversight

- Jakarta demonstrated that Umbrellas are bad
- Flattened organisational structure
 - Jakarta projects become top level
- All projects submit board reports quarterly
 - Community focused
 - Not technical focused
- Board can, and does (occasionally) intervene
 - But on community issues only

The Apache Ecosystem

APACHE CON
EUROPE

A white feather graphic is positioned behind the text 'APACHE CON' and 'EUROPE', extending from the right side of the text towards the left.

Don't pick winners, pick runners

- Board doesn't say “We want X”
- Developers say “X is cool”
 - We enable developers to do cool stuff
 - Apache developers are at the forefront of innovation
- Not interested in a single runner
 - We want relay teams
 - Community is critical to the Apache Way
- Apache is about supporting communities

Infrastructure Team

Travel Assistance Committee

Public Relations Committee
press@apache.org

ASF Legal Team

legal-discuss@apache.org

Fund Raising

fundraising@apache.org

Sponsorship Program

sponsor.apache.org

Security Response Team

security@apache.org

(nearly) All volunteer work

- If you want something done
 - Volunteer on the appropriate committee
- A few paid contractors
 - Press
 - Infrastructure
 - Admin
- *No paid committers!*

User

The Chain of Merit

A 3D diagram illustrating a hierarchy of merit levels. It consists of a staircase of light-colored rectangular blocks. The staircase has four steps, each higher than the previous one. The levels are labeled on the left side: 'User' at the bottom, 'Committer' above it, 'Project Member' above that, and 'Foundation Member' at the top. The text 'The Chain of Merit' is written across the base of the blocks in a light gray font.

Types of contribution

- Any constructive contribution earns merit
 - Permissively licensed only
- Not just code
 - Evangelism
 - Bug reports and triage
 - Testing
 - Documentation
 - Design feedback
 - User support
 - etc

All contributions are equal

- Merit does **not** buy you authority
 - The community must still agree
- Merit buys you privileges, eg
 - Commit access
 - Conflict resolution capabilities
- Community agrees on direction
- Individuals then make it happen
- Takes both agreement and action!

Decision Making

- Most decisions are reversible

“If it didn't happen on the list, it didn't happen”

- Uncontroversial or small changes
 - Lazy Consensus – assume it's OK – JFDI
- Controversial, irreversible or large changes
 - Propose a plan, then wait a minimum of 72 hours

How are decisions made?

Finding that list!

- Listed on the project website
- dev@project.apache.org
 - Primary list
- commits@project.apache.org
 - Automated source change notifications
- user@project.apache.org (optional)
 - User-to-User support
- <http://mail-archives.apache.org/>

No Jerks Allowed

- Most people are nice
 - We all have bad days
 - Some are, well, Jerks
- Trolls exist
 - DO NOT FEED
- Don't become a poisonous person

“How Open Source Projects Survive Poisonous People (And You Can Too)” by Ben Collins-Sussman & Brian Fitzpatrick
<http://video.google.com/videoplay?docid=-4216011961522818645>

Business and the Apache Way

APACHE CON
EUROPE

Ways to Contribute

- Documentation, Tutorials and Examples
 - Helping others with queries and questions
 - Issue / bug tracker triage
 - Testing new fixes, helping reproduce problems
 - Bug Fixes and New Features
 - Writing add-ons and extensions
 - Mentoring, volunteering for the Foundation
-
- Many different ways to get involved, all are important!

Companies Contributing

- Everyone at Apache is there as an individual
- Companies can't buy access or committership
- To get involved, companies (or other organisations) need to put the employees to work on the project, and through that have them gain merit
- BDFLs are not allowed, everyone has an equal voice
- Diversity of the community means one company can't dominate the project
- This means you can safely build your business on it
- (But you can't take a railroad a project either!)

Work on what you want...

when you want.

Learn from the best

November 16, 2005
<http://www.flickr.com/photos/hi-phi/6>

<http://www.flickr.com/photos/mg315/381296439/>

Make work visible and re-usable.

Permissive License

In Summary

- It Works!
- It's the best way we know of to develop Open Source Software in a collaborative, open and meritocratic way
- Some things can seem hard at first
- But there's normally a reason why!
- Ask questions! Much is documented, but not all, and not everything is in the same place
- New community members are best placed to flag up gaps, as well as to help fill them!
- Learn, participate, improve!

Any Questions?
