The Official User Conference of The Apache Software Foundation

- social data API
 - persons
 - relationships
 - activities
- persistence API

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

Person

- Core building block of the social API
- Has a huge number of attributes
 - about_me, activities, addresses, age, body_type, books, cars, children, current_location, date_of_birth, drinker, email, ethnicity, fashion, food, gender, happiest_when, has_app, heroes, humor, id, interests, job_int job_interests, jobs, languages_spoken, living_arrangement, looking_for, movies, music, name, network_presence, nickname, pets, phone_numbers, political_views, profile_song, profile_url, profile_video, quotes, relationship_status, religion, romance, scared_of, schools, sexual_orientation, smoker, sports, status, tags, thumbnail_url, time_zone, turn_offs, turn_ons, tv_shows, urls
- Almost all are optional

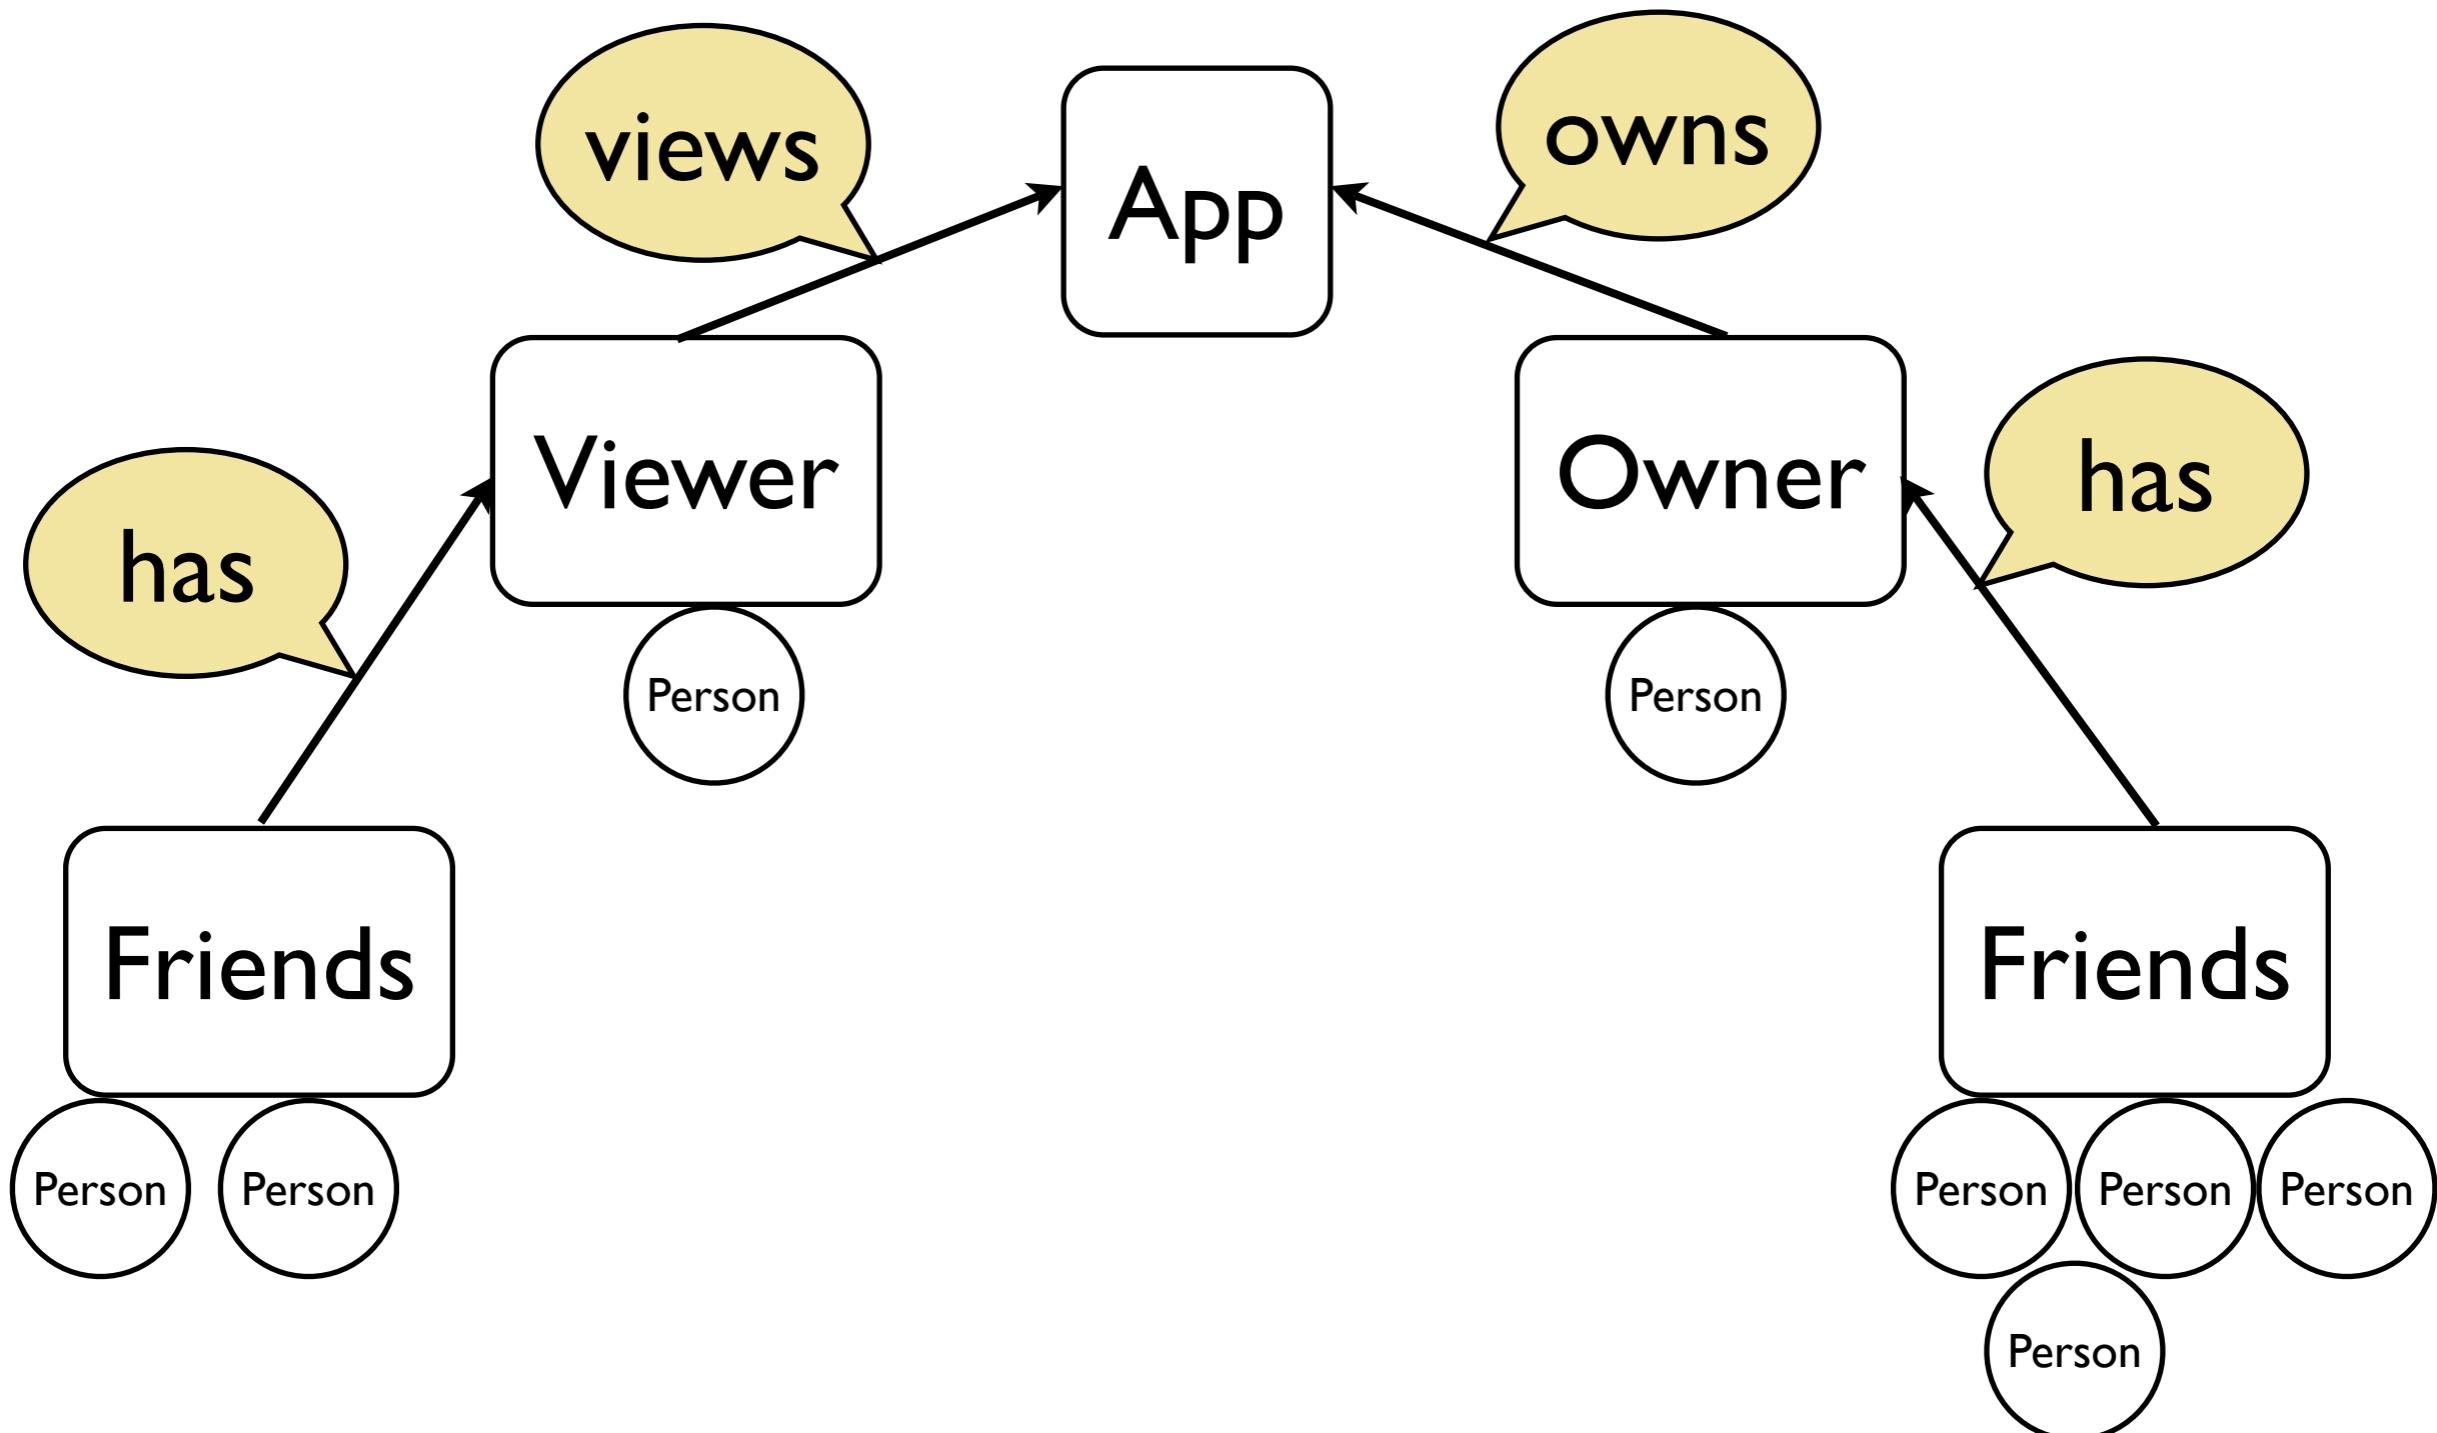

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

Relationships

Activities

- Activities stream related to Applications
- Can contain URLs, Images, Videos
- Templating system for sharing URLs
- read and write access

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

AppData

- Gadgets had to rely on Prefs or external backends for data storage
- AppData stores arbitrary key/value pairs
- write for own data,
read for related persons

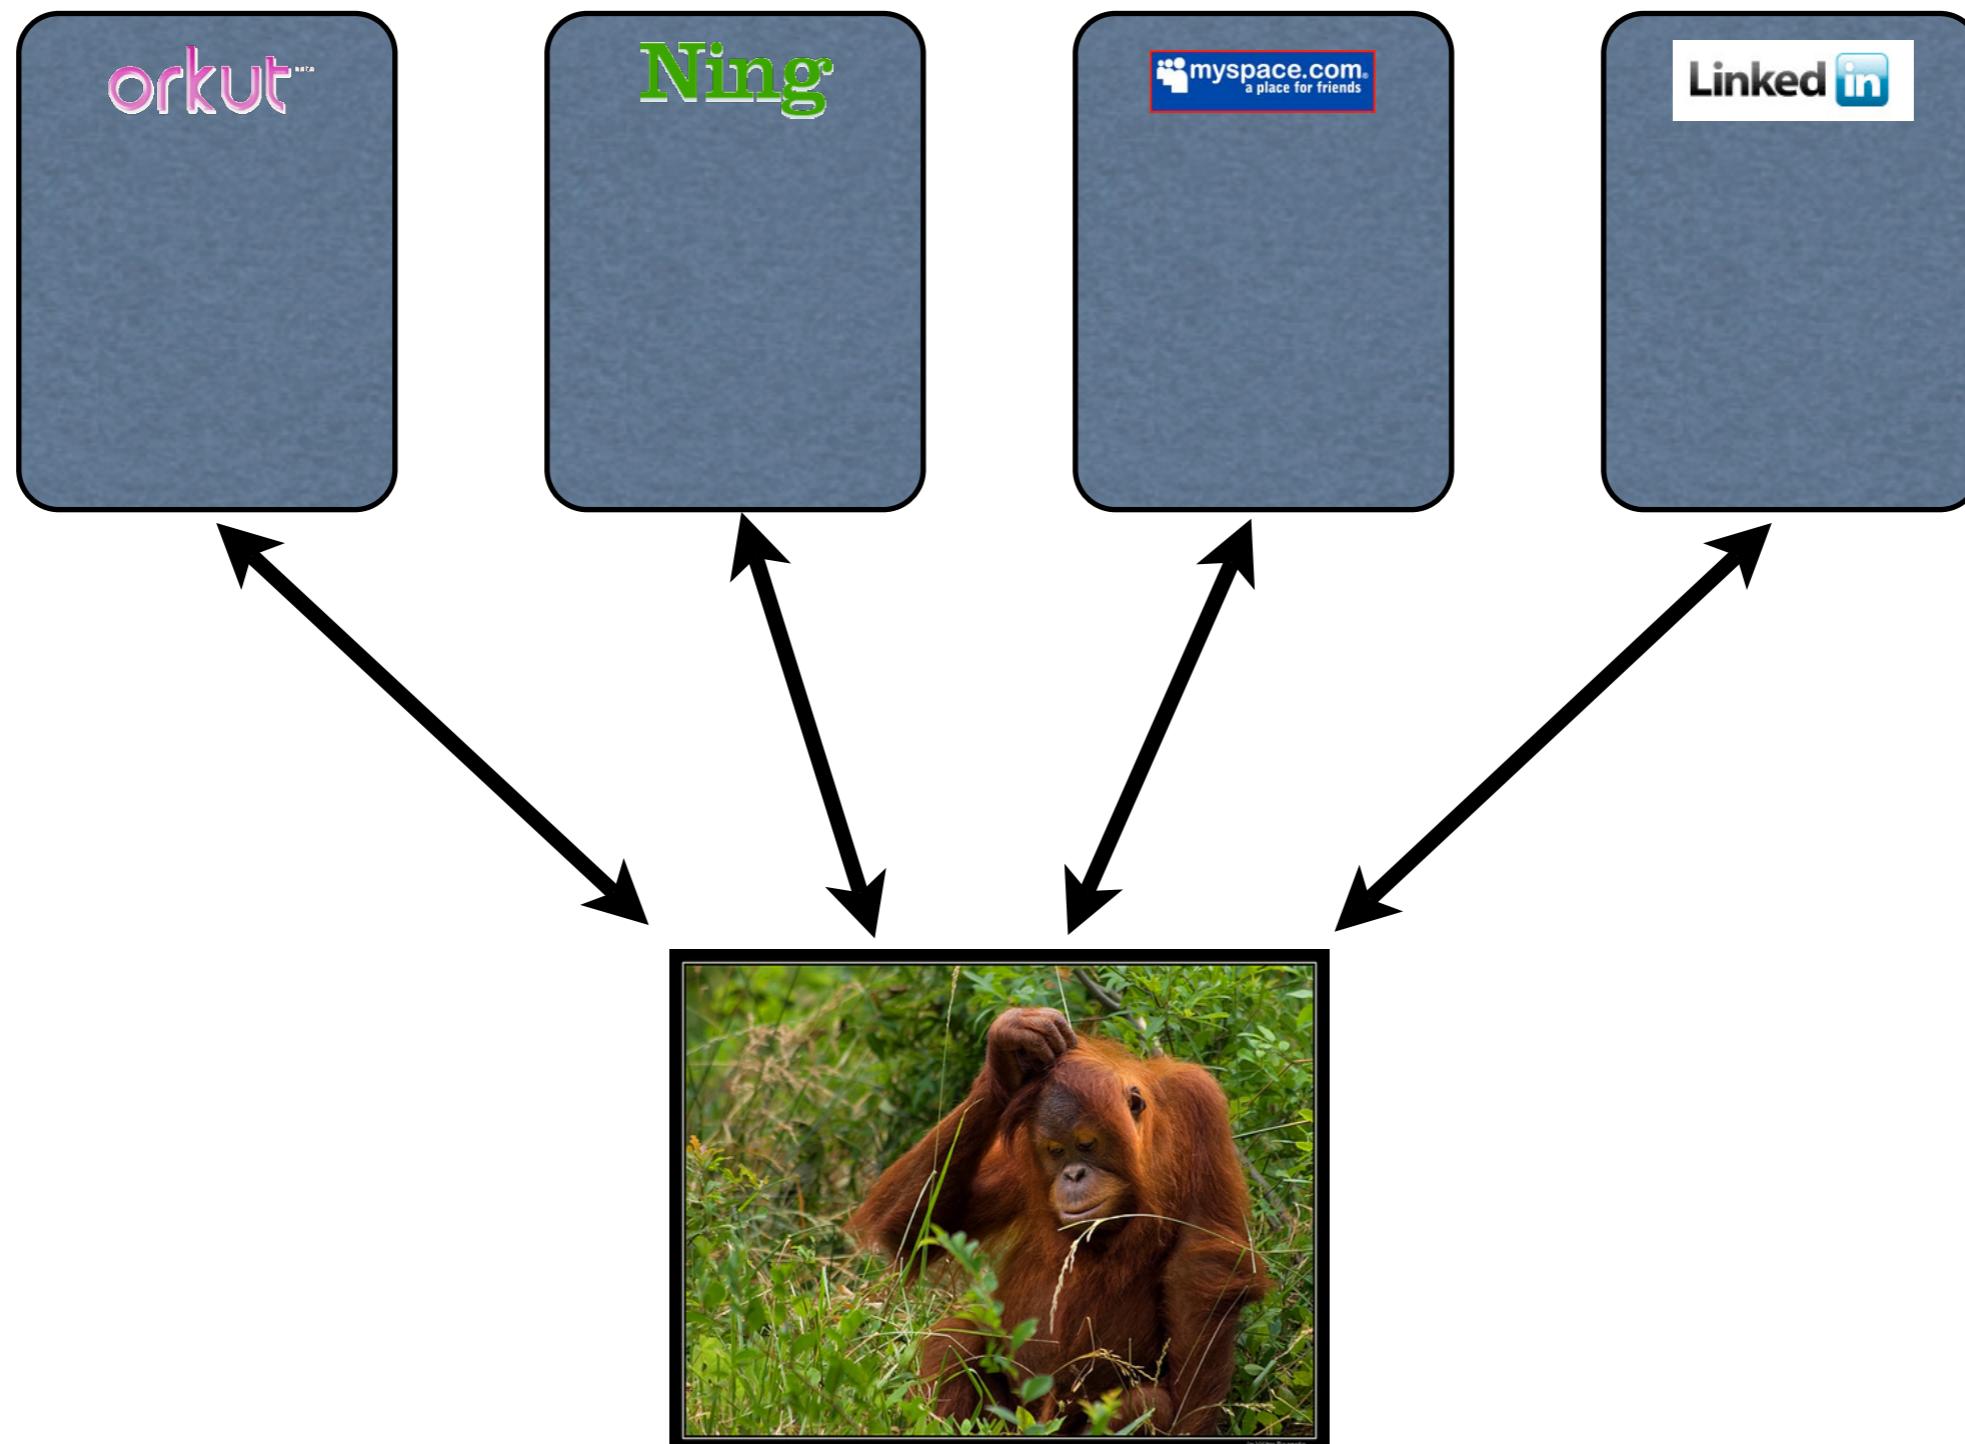

ApacheCon US 2008

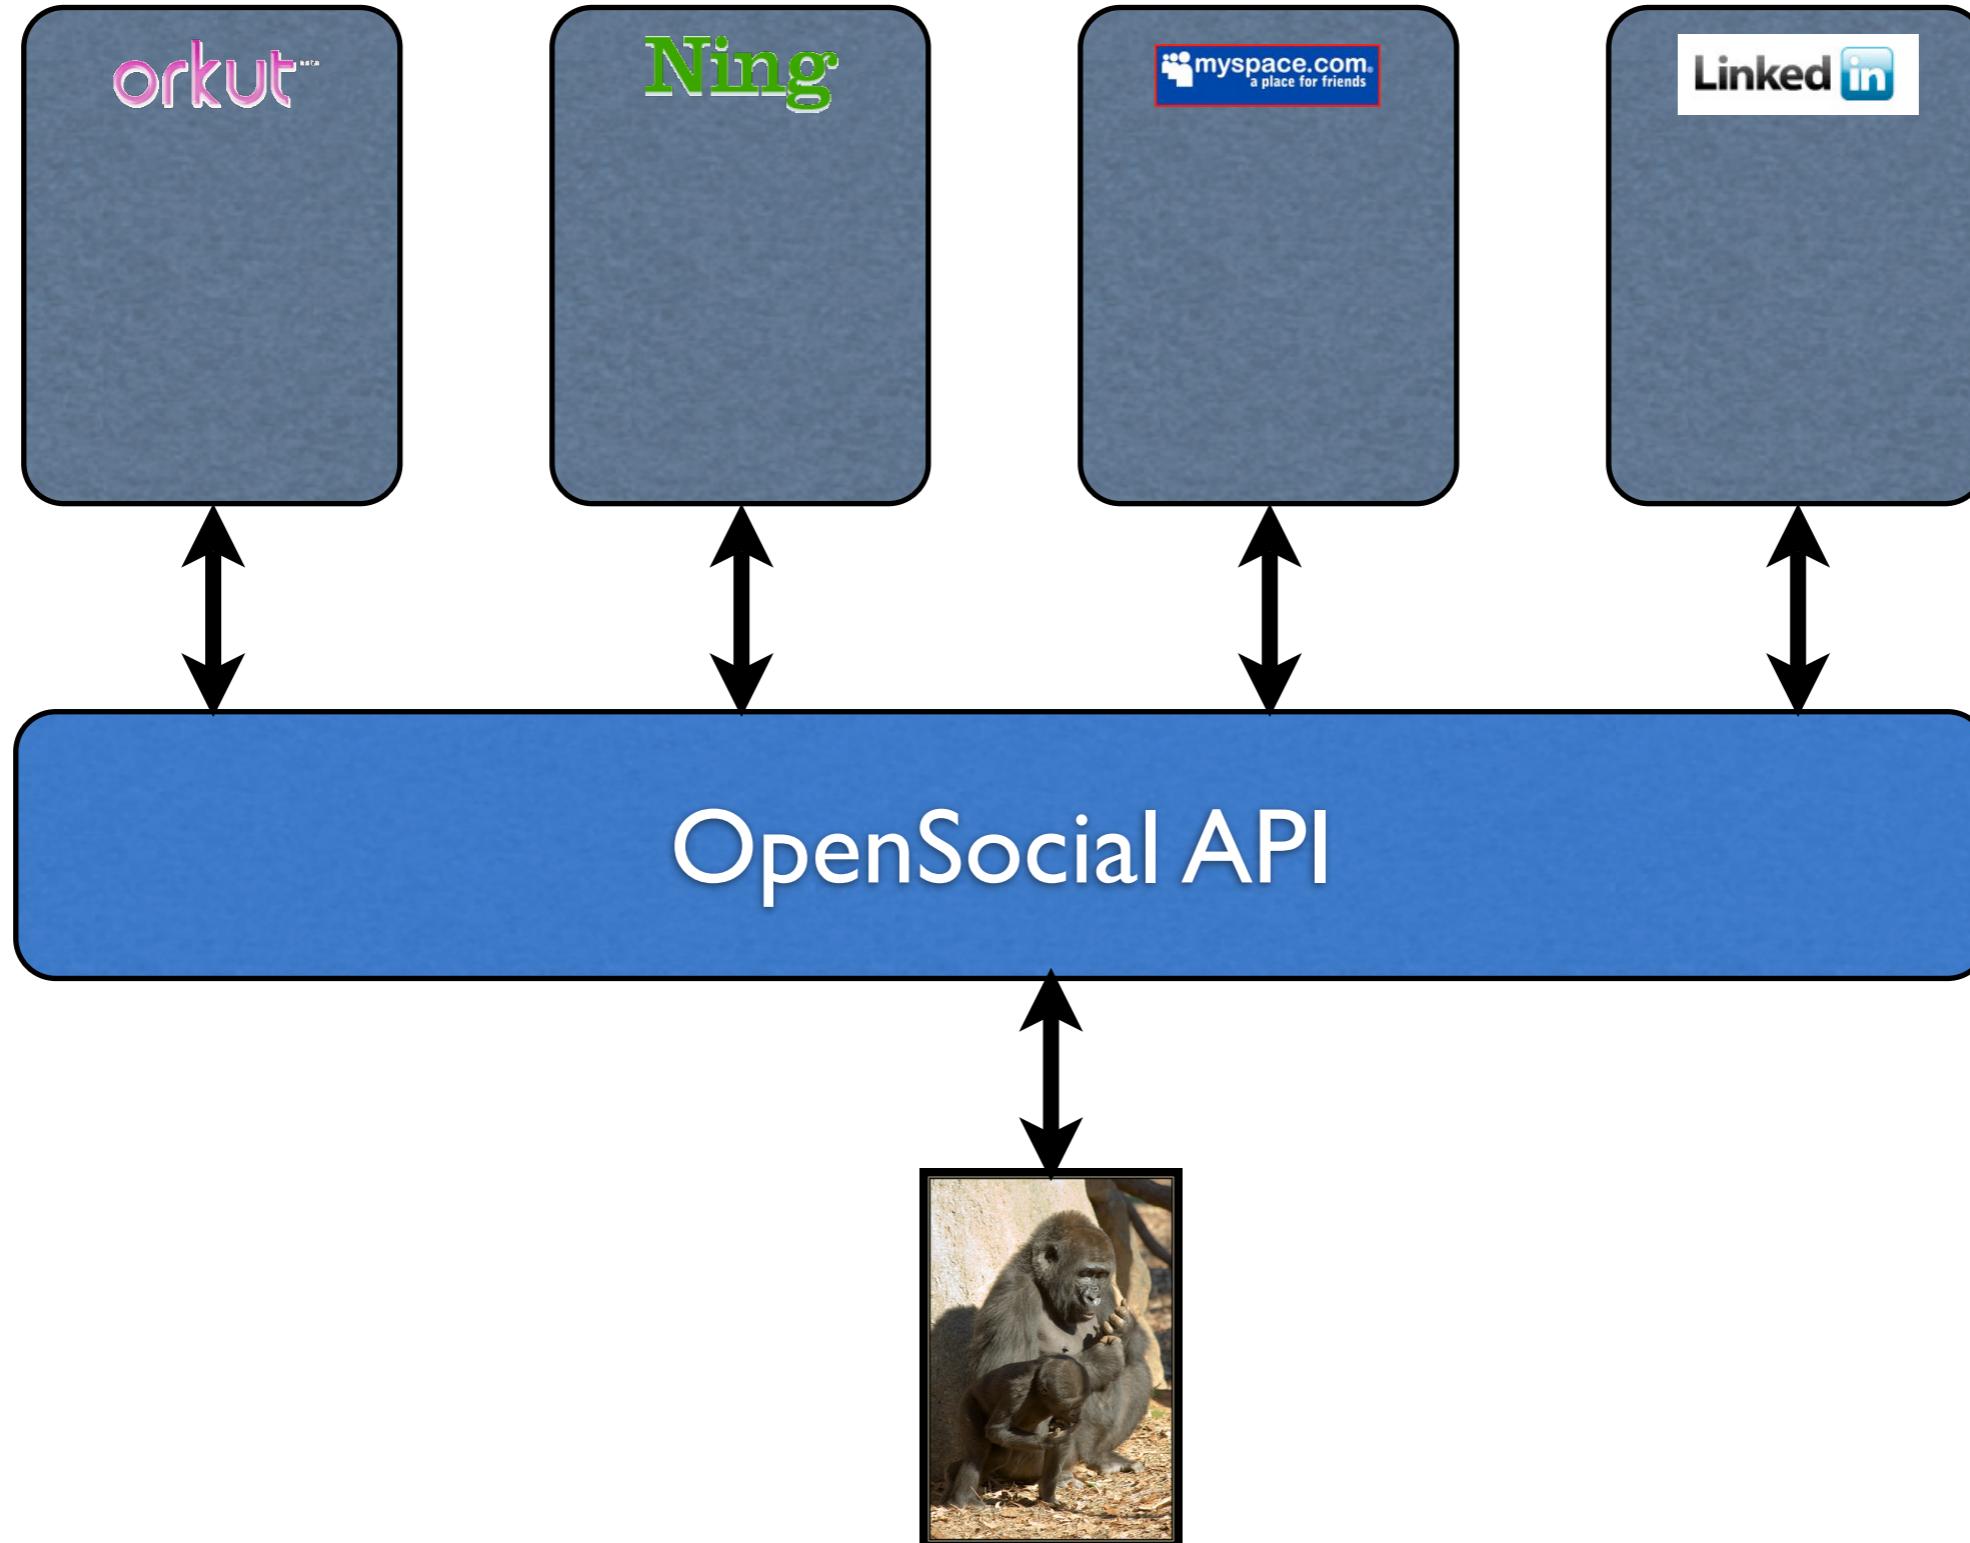

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

before OpenSocial

with OpenSocial

```
<ModulePrefs title="going social">
  <Require feature="opensocial-0.8" />
</ModulePrefs>
```

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

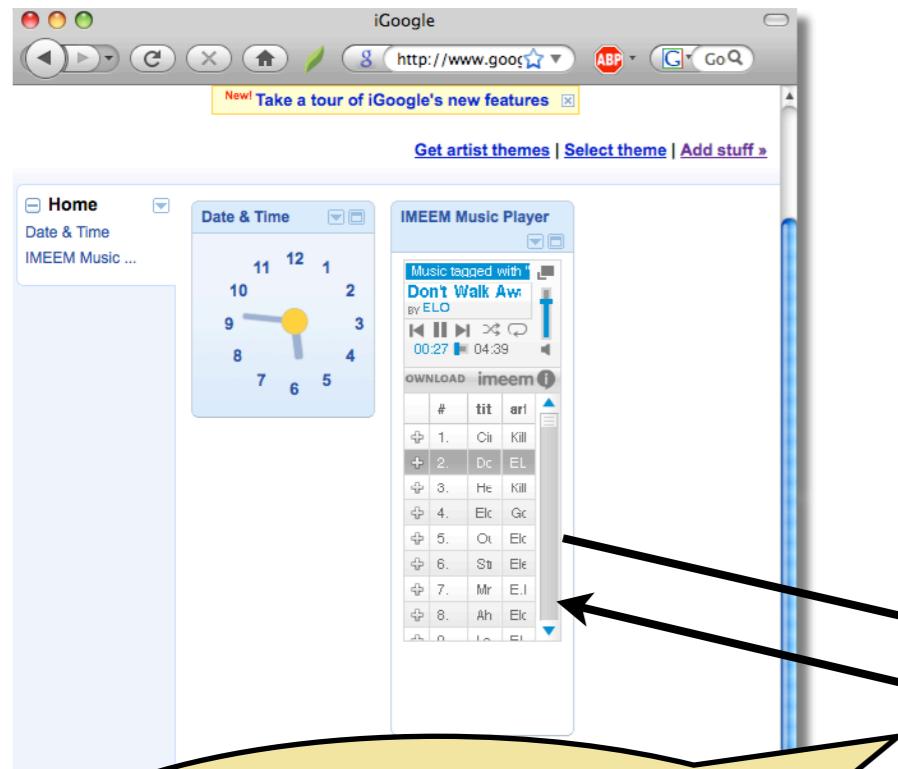

- up to opensocial-0.7:
 - browser facing Javascript API,
delivered as a feature to Gadgets
 - Gadget Renderer
 - Data Proxy
 - OpenSocial API implementation

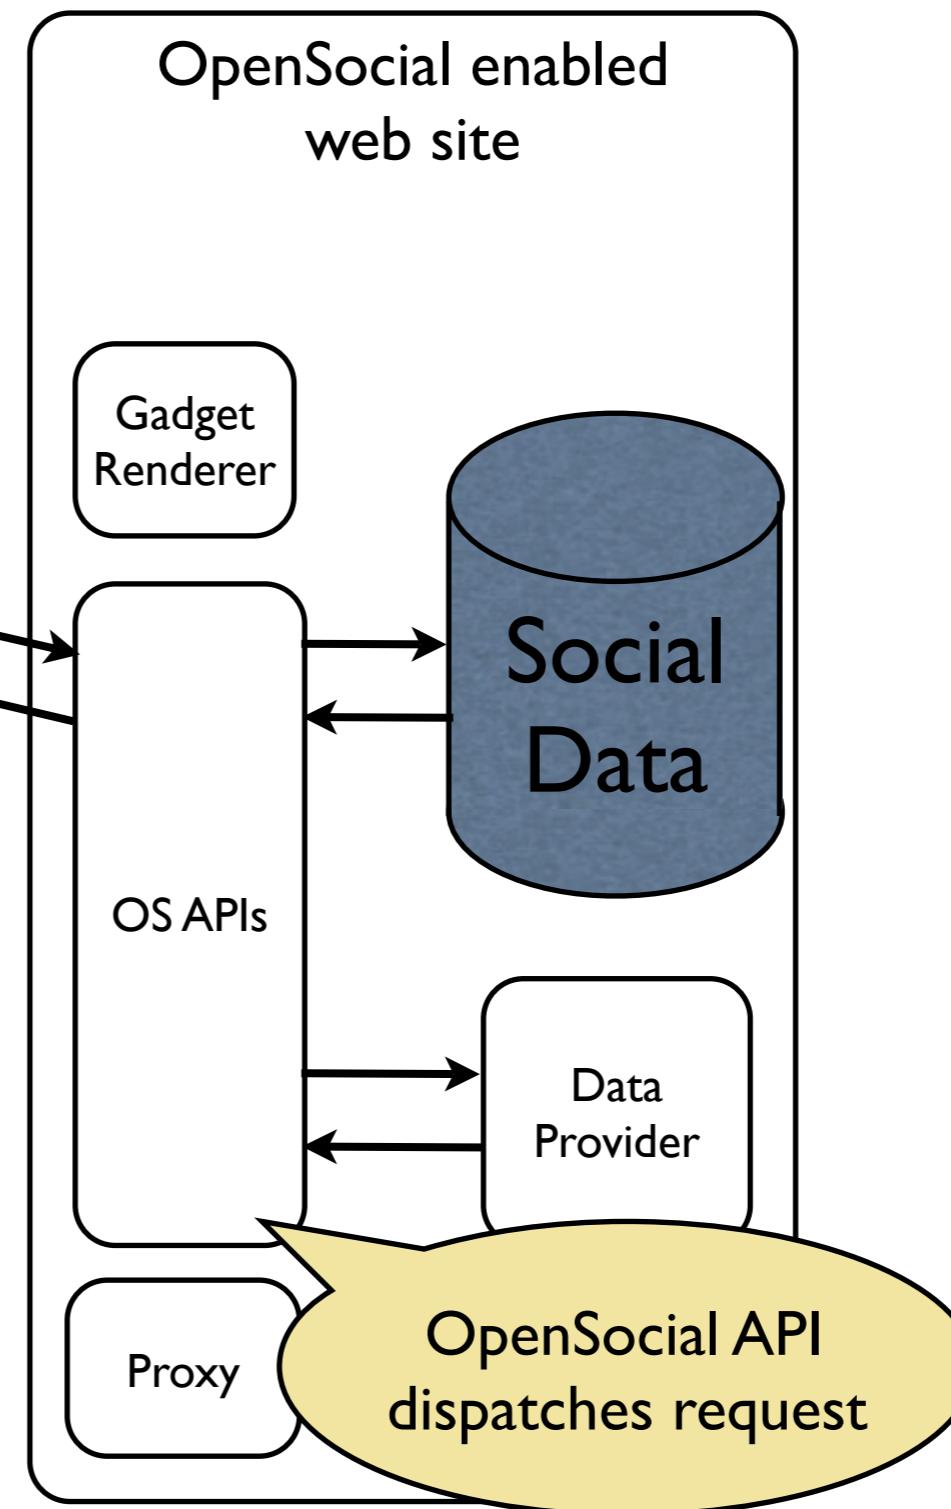

ApacheCon US 2008

The Official User Conference of The Apache Software Foundation

- How the web became social
- Get out of the Silo – Google Gadgets
- OpenSocial – A social API
- **Apache Shindig**
- Customizing Shindig
- Summary

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

Apache Shindig

- Incubator podling since December 2007
- Reference implementation in Java and PHP
- Goal: OpenSocial 0.8.1 compliance
- no release yet, get it from SVN
(no logo either!)

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

Shindig Components

- **Java implementation**
(PHP implementation is ~ similar)
 - Gadget renderer and server
 - Gadget data proxies
 - OpenSocial Data Service
including a sample implementation using JSON DB.
 - Caching infrastructure

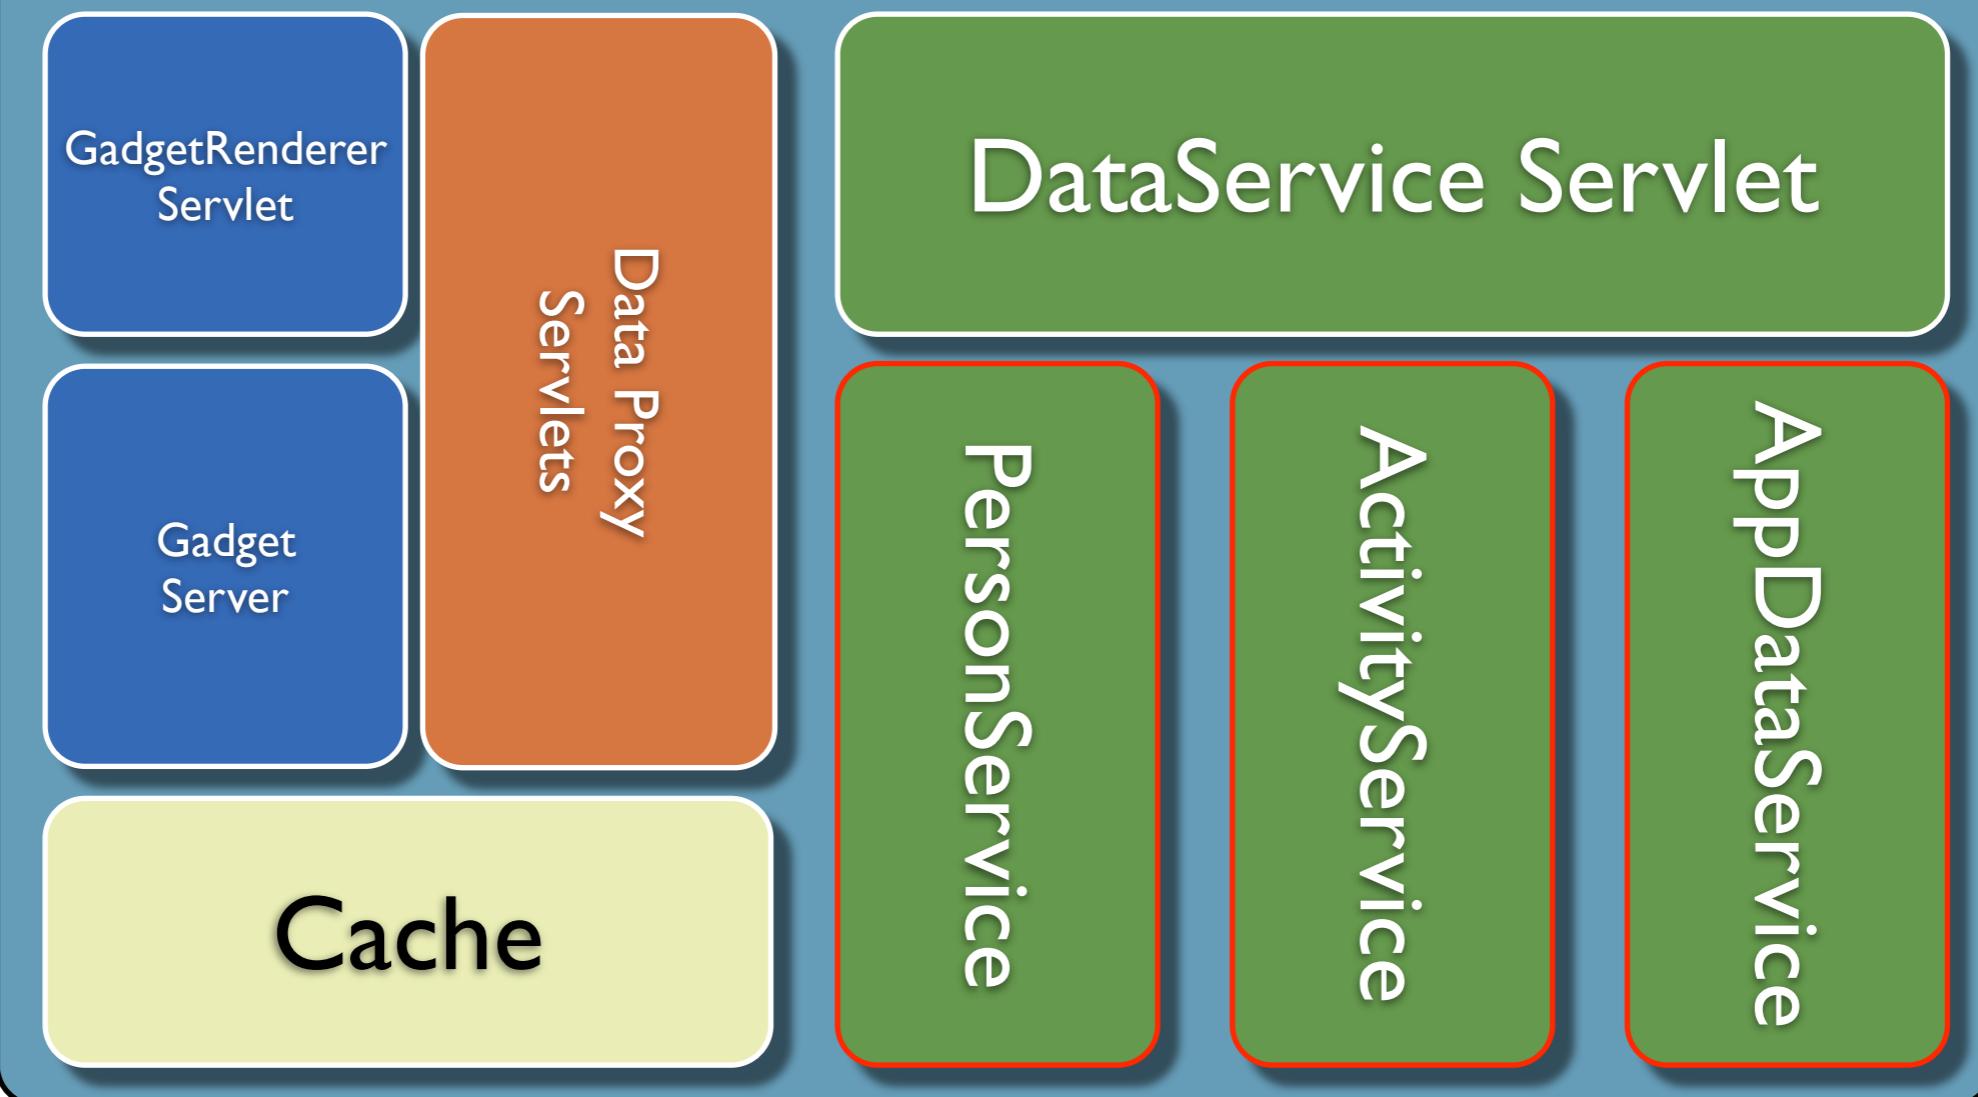

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

HTTP Container

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

JavaScript Features

- fully gadget and opensocial spec compliant
- Caja ready (don't use in production yet)
- JSON and Restful container implementations
- customizable through JSON config

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

Sample Container

Gadget testing container

Displaying gadget: <http://localhost:8080/gadgets/files/samplecontainer/examples/SocialHelloWorld.xml> use cache use caja use permissive

Using state: <http://localhost:8080/gadgets/files/samplecontainer/..../sampledatacanonicaldb.json> do evil

Viewer id: john.doe Owner id: john.doe

[reset all](#) [dump state](#)

Social Hello World | [settings toggle](#)

Say hello

Ciao a tutti
Georgey (2) male

여러분, 안녕하세요
Janey (7) female

Hello World
Maija (0) female

Hello World
Johnny (0) male

Fertig

Proxy: None

The screenshot shows a web-based application window titled "Gadget testing container". At the top, there are several configuration options: "Displaying gadget" set to "SocialHelloWorld.xml" with the "use cache" checkbox checked; "Using state" set to "canonicaldb.json" with the "do evil" checkbox unchecked; and viewer and owner IDs both set to "john.doe". Below these are two buttons: "reset all" and "dump state". The main content area is titled "Social Hello World" and includes a "Say hello" button. It displays four user profiles, each with a blue silhouette icon and a speech bubble containing a greeting and the user's name and gender. The users are Georgey (male, 2), Janey (female, 7), Maija (female, 0), and Johnny (male, 0). At the bottom of the application window, there is a status bar with the word "Fertig" and a "Proxy: None" indicator.

The Official User Conference of The Apache Software Foundation

Backend APIs

```
public class CustomPersonService implements PersonService {  
    public ... getPeople(...) { ... }  
    public ... getPerson(...) { ... }  
}
```

```
public class CustomActivityService implements ActivityService {  
    public ... getActivities(...) { ... }  
    public ... getActivity(...) { ... }  
    public ... deleteActivities(...) { ... }  
    public ... createActivitity(...) { ... }  
}
```

```
public class CustomAppDataService implements AppDataService {  
    public ... getPersonData(...) { ... }  
    public ... deletePersonData(...) { ... }  
    public ... updatePersonData(...) { ... }  
}
```

PersonService

- Access to user specific information
- read-only access
- paging/filtering/sorting by the backend
- platform data mapping needed

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

Customizing

- Shindig is wired with Google Guice
- Implementation interfaces for
 - Security, Blacklisting
 - Caching, Fetching
 - Configuration, URL generation
 - Content rewriting
- Default implementations available

ApacheCon US 2008

November 3 - 7 • New Orleans
Leading the Wave of Open Source

The Official User Conference of The Apache Software Foundation

...going social

- Shindig is one part of an OpenSocial site
- Other parts are
 - Application catalog
 - Invites / Messaging
 - Management (Blacklists, Security, Cache)
 - Developer sites (sandbox)
