The Apache Way

APACHE CON
NORTH AMERICA

A collaborative slide deck with
contributions from \$
{ASF_MEMBERS}

(in particular **Ross Gardler, Justin Erenkretz, Isabel Drost and Lars Eilebrecht**)

What is the Apache Way?

What will we try to cover?

- How the foundation works
- How we develop code
- What we have found that works
- And what hasn't worked so well...
- Business and Apache
- From myself, and the other members in the audience!

Community talks today, Business talks tomorrow!

But first, some history!

Informal Collaboration (1995)

- Apache Group
 - 8 people
 - Sharing code on the abandoned NCSA httpd
- Apache web server releases
 - 0.6.2 (first public release) – April 1995
 - 1.0 release – 1st December 1995

A Foundation (1999)

- Commercial opportunities
 - Formal legal structure required
- Membership based charity
 - IRS 501(c)3
 - Donations by individuals tax-deductible (in the US)
- Virtual world-wide organisation
- First ApacheCon – March 2000
 - Apache 2.0 Alpha 1 released then
- First European ApacheCon – October 2000

Today

- Hundreds of projects
 - Small libraries
 - Critical infrastructure
 - End user tools
- Well defined project governance
- Formal Mentoring
- Accelerating growth

The ASF, By Numbers

- Projects = 161
- Incubating Projects = 39
- Board / President Committees = 5
- Board Members = 9
- Foundation Members = ~675
- PMC Committee Members = ~2150
- Committers = ~4500
- ICLAS = ~6900

Foundation Structure

One way to view it

Another way

- A number of projects
- Each project is responsible for their own code, community and direction
- Board provides oversight, but that's it
- Board has no say on what code gets written, nor what direction projects take, nor what projects we should start. All of that is devolved to the projects themselves
- Foundation has some common support (eg infra, press, trademarks), to help projects focus on their code and on their communities

Apache Labs

RIP

Apache Attic

Not all “Plain Sailing”

- Jakarta “Foundation”
 - Jakarta was an “Umbrella” for all Java projects
 - Successful brand in its own right
 - Tomcat, Struts, Ant, and many more innovations
- Started to copy the foundation structure
 - “Mini”-board... but problems arose...
 - Avalon – Who was responsible?

Importance of Oversight

- Jakarta demonstrated that Umbrellas are bad
- Flattened organisational structure
 - Jakarta projects become top level
- All projects submit board reports quarterly
 - Community focused
 - Not technical focused
- Board can, and does (occasionally) intervene
 - But on community issues only

The Apache Ecosystem

Don't pick winners,

pick runners

- Board doesn't say "We want X"
- Developers say "X is cool"
 - We enable developers to do cool stuff
 - Apache developers are at the forefront of innovation
- Not interested in a single runner
 - We want relay teams
 - Community is critical to the Apache Way
- Apache is about supporting communities

Infrastructure Team

(nearly) All volunteer work

- If you want something done
 - Volunteer on the appropriate committee
- A few paid contractors
 - Press
 - Infrastructure
 - Admin
- ***No paid committers!***

Project Member

Committer

User

The Chain of Merit

Types of contribution

- Any constructive contribution earns merit
 - Permissively licensed only
- Not just code
 - Evangelism
 - Bug reports and triage
 - Testing
 - Documentation
 - Design feedback
 - User support
 - etc!

All contributions are equal

- Merit does **not** buy you authority
 - The community must still agree
 - Merit buys you privileges, eg
 - Commit access
 - Conflict resolution capabilities
 - Community agrees on direction
 - Individuals then make it happen
- Takes both agreement and action!

Decision Making

- Most decisions are reversible

“If it didn't happen on the list, it didn't happen”

- Uncontroversial or small changes
 - Lazy Consensus – assume it's OK – JFDI
- Controversial, irreversible or large changes
 - Propose a plan, then wait a minimum of 72 hours

How are decisions made?

Finding that list!

- Listed on the project website
 - dev@project.apache.org
 - Primary list
 - commits@project.apache.org
 - Automated source change notifications
 - user@project.apache.org (optional)
 - User-to-User support
- <http://mail-archives.apache.org/>

No Jerks Allowed

- Most people are nice
 - We all have bad days
 - Some are, well, Jerks
- Trolls exist
 - DO NOT FEED
- Don't become a poisonous person

“How Open Source Projects Survive Poisonous People (And You Can Too)” by Ben Collins-Sussman & Brian Fitzpatrick
<http://video.google.com/videoplay?docid=-4216011961522818645>

Business and the Apache Way

Ways to Contribute

- Documentation, Tutorials and Examples
 - Helping others with queries and questions
 - Issue / bug tracker triage
 - Testing new fixes, helping reproduce problems
 - Bug Fixes and New Features
 - Writing add-ons and extensions
 - Mentoring, volunteering for the Foundation
- Many different ways to get involved, all are important!

Companies Contributing

- Everyone at Apache is there as an individual
 - Companies can't buy access or committership
 - To get involved, companies (or other organisations) need to put the employees to work on the project, and through that have them gain merit
 - BDFLs are not allowed, everyone has an equal voice
 - Diversity of the community means one company can't dominate the project
 - This means you can safely build your business on it
-
- (But you can't take a railroad a project either!)

Work on what you want...

when you want.

Learn from
the best

November 16, 2005

<http://www.flickr.com/photos/hi-phi/6>

<http://www.flickr.com/photos/mg315/381296439/>

Make work visible and re-usable.

Permissive License

In Summary

- It Works!
 - It's the best way we know of to develop Open Source Software in a collaborative, open and meritocratic way
 - Some things can seem hard at first
 - But there's normally a reason why!
 - Ask questions! Much is documented, but not all, and not everything is in the same place
 - New community members are best placed to flag up gaps, as well as to help fill them!
-
- Learn, participate, improve!

Any Questions?
