# Today's Speakers

- Steve Demeter, Demiforce
  - Thoughts & guidelines for touch input in games
  - Five effective multitouch control schemes
- Josh Shaffer, Apple
  - Touches and events
  - Multi-Touch handling
  - Controls

# Guest Speaker: Steve Demeter, Demiforce

# Introduction

- Steve Demeter, founder of Demiforce
  - Created “Trism” at the launch of the AppStore
  - Demiforce creates original IP & provides whitelabel consulting
- What I’ll be talking about
  - Thoughts & guidelines for using touch input in iPhone games
  - Five forms of multitouch control schemes used in iPhone games

# Thoughts & Guidelines For Using Touch Input in iPhone Games

# Touch Control vs Tilt Control

- Many see the iPhone is a casual gaming device, meant to be played on the go
- Accelerometer games are "fragile", requiring the user to be in a stable, undisturbed location in order to play
- The most stable, undisturbed location is one's own home, where the user may rather play a console or computer game than an iPhone game

# Finger Touch vs Mouse Cursor

- Remember it's a finger you're using to control the game, not a mouse cursor!
- Every time the user touches the screen, they may be sacrificing some kind of display

# Accommodating Finger Sizes

- iPhone gamers are all ages, and have all different sized fingers
- 64px \* 64px is the smallest area Demiforce uses for touchable shapes
- There are ways to get around this, ie: Bejeweled 2

# Aiding Touch Control

- It's helpful to put some sort of indicator for what's being touched
- Trism does this two ways:
  - When you touch a trism, a highlighted marker pops out
  - Once you start sliding a strip, you can move your finger off the selected trism

# Five Effective Multitouch Control Schemes

# 1: Sliders

- Provides two single-dimensional inputs
- **Pro:** Allows a clear barrier between control surface and gameplay area
- **Con:** This type of control may not be enough for some games
- **Example:** Vector Tank

## 2: Swivels

- Provides two independent controls which report length & direction, similar to analogue joysticks
- **Pro:** Similar to sliders, the user interacts with thumbs away from the gameplay area
- **Con:** Works best when the user has his thumbs on the swivels at all times, which may not work well for certain games
- **Examples:** iDracula (fixed), Dropship (relative)

# 3: Direct Touch

- Provides intuitive multitouch control (ie: pinch, spread)
- **Pro:** Fundamentally new. These types of game designs are generally seen as “out of the box”
- **Con:** Too many pinches and swipes can crowd the screen
- **Example:** Pinch & Pop

## 4: Face Buttons, Simulated D-Pad

- Provides a pseudo classic controlpad
- **Pro:** Allows ports & retro-style games on iPhone
- **Con:** Potential button crowding
- **Examples:** Archibald's Adventures, Papi Cave

# 5: Create Your Own!

- Innovation is celebrated & monetizable on the iPhone
- New types of controls are appearing from students, indies, and corporations
- See what you can create!
