

# Understanding the Document Interaction Controller

**Jason Beaver**

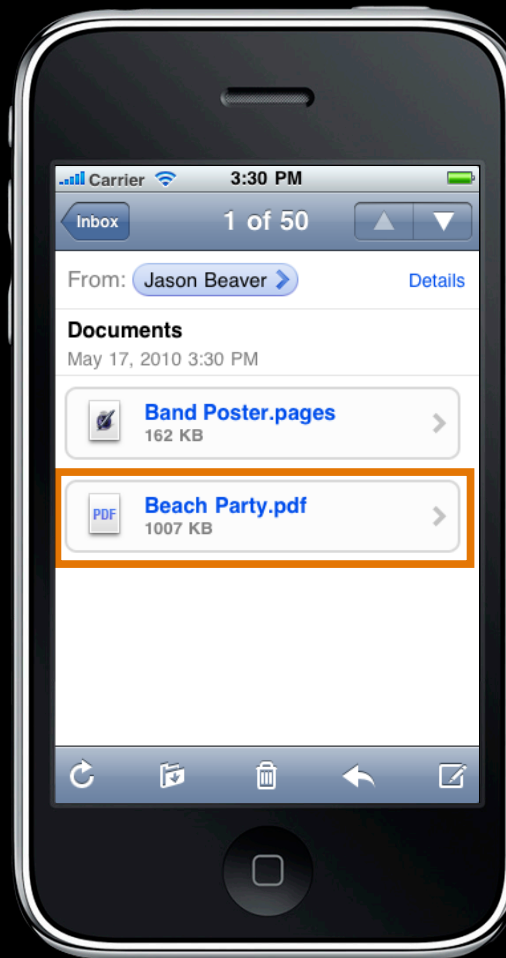

iPhone Frameworks Engineer

# What You'll Learn

- Document basics
- Registering for documents
- Opening documents
- Interacting with documents
- Quick Look Framework

# Document Basics

# Document Basics

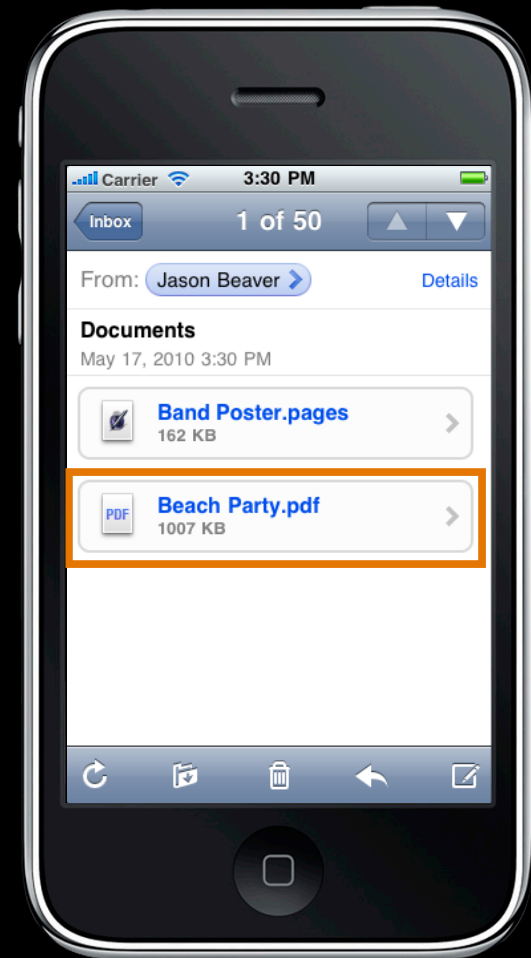

# Document Basics

- Documents are specified by URL

file:///.../Beach Party.pdf

UTN (open.adobe.pdf)

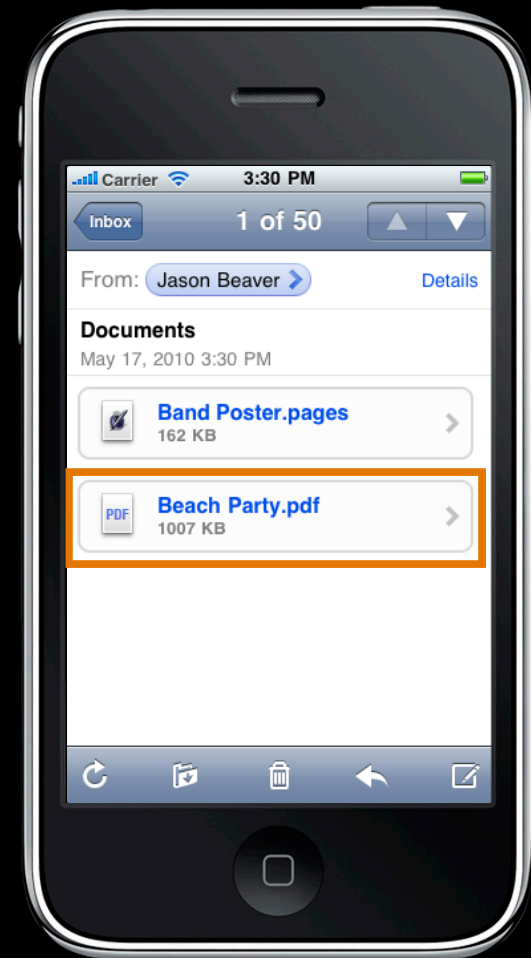

# Document Basics

- Documents are specified by URL
- Name and UTI can be specified separately

file:///.../UUID

Beach Party.pdf

UTI (com.adobe.pdf)

# Document Basics

- Documents are specified by URL
- Name and UTI can be specified separately
- Documents also include icons

# Registering for Documents

# Registering for Documents

## Info.plist

- CFBundleDocumentTypes

|                        |                              |                                    |
|------------------------|------------------------------|------------------------------------|
| CFBundleTypeExtensions | Array of filename extensions | pdf                                |
| LSItemContentTypes     | Array of UTIs                | com.adobe.pdf                      |
| CFBundleTypeName       | User Visible Name            | PDF Document                       |
| LSHandlerRank          | Fine Tune Document Binding   | Owner / Default / Alternate / None |

# Registering for Documents

## Info.plist

```
<key>CFBundleDocumentTypes</key>
<array>
  <dict>
    <key>CFBundleTypeExtensions</key>
    <array>
      <string>pdf</string>
    </array>
    <key>LSItemContentTypes</key>
    <array>
      <string>com.adobe.pdf</string>
    </array>
    <key>CFBundleTypeName</key>
    <string>PDF Document</string>
  </dict>
</array>
```

# Opening a Document

# Opening a Document

- UIApplicationDelegate Protocol

`application: didFinishLaunchingWithOptions:`

|   |                   |
|---|-------------------|
| <code>UIApplicationLaunchOptionsURLKey</code>               | URL               |
| <code>UIApplicationLaunchOptionsSourceApplicationKey</code> | Bundle Identifier |
| <code>UIApplicationLaunchOptionsAnnotationKey</code>        | Additional Data   |

`application: handleOpenURL:`

# Quick Look Framework

# Quick Look Framework

A dedicated view controller to preview documents

- Displays common document types
  - PDF, HTML, RTF
  - Text (plain, csv, xml, diff, ...)
  - Images
  - Contacts, Events
  - Apple iWork (Pages, Numbers, Keynote)
  - Microsoft Office (Word, Excel, Powerpoint)
- API similar to Quick Look on the desktop

# Quick Look Framework

## Getting started with the preview controller

- Creation

```
#import <QuickLook/QuickLook.h>  
QLPreviewController *controller = [[QLPreviewController alloc] init];
```

- Presentation

```
presentModalViewController: animated:  
pushViewController: animated:
```

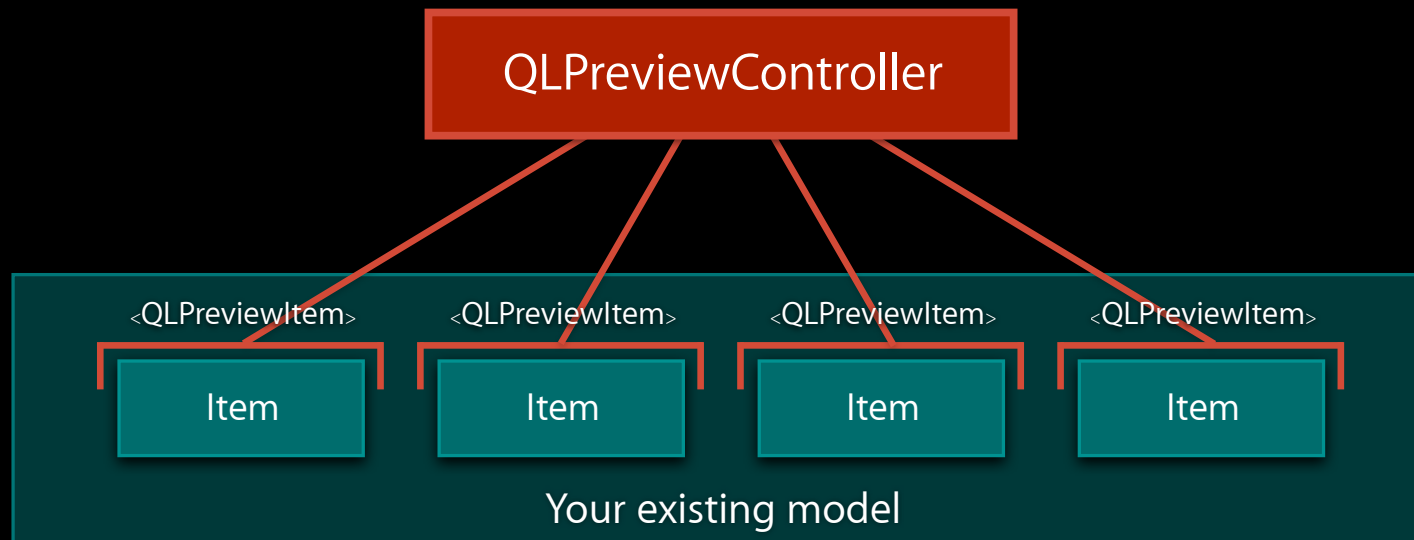

# Quick Look Framework

## Providing contents

- Datasource methods

```
numberOfPreviewItemsInPreviewController:
```

```
previewController: previewItemAtIndex:
```

# Quick Look Framework

## QLPreviewItem Protocol

- Supply NSURLs or your own objects

```
@protocol QLPreviewItem <NSObject>
@property(readonly) NSURL *previewItemURL;
@property(readonly) NSString *previewItemTitle;
@end
```

# Quick Look Framework

## Delegate methods

```
previewControllerWillDismiss:
```

```
previewControllerDidDismiss:
```

```
previewController: shouldOpenURL: forPreviewItem:
```

# Demo

**Luke the Hiesterman**  
iPhone Frameworks Engineer
