

Testing Your Location-Aware Application

All without leaving your chair

Session 518

Morgan Grainger

Software Engineer

These are confidential sessions—please refrain from streaming, blogging, or taking pictures

Introduction

- We know testing is important
- Why do we not do more of it?
- How can we make it easier?

What You Will Learn

- Where do apps commonly fail?
- How can you make sure yours does not?
- What tools do we have to make it easy?

Why Test Your Location-Aware App?

A cautionary tale

Demo

The screenshot shows the iTunes App Store interface. The top navigation bar includes 'Music', 'Movies', 'TV Shows', 'App Store', 'Podcasts', 'Audiobooks', 'iTunes U', and 'Ping'. The left sidebar lists 'LIBRARY' (Music, Movies, TV Shows, Podcasts, iTunes U, Books, Apps, Radio) and 'STORE' (Purchased, Shared, Genius, Playlists). The main content area displays 'Customer Ratings' for the current version (4 stars, 16 ratings) and all versions (2.5 stars, 25 ratings). Below this is the 'Customer Reviews' section, which includes a 'Write a Review' form and a list of reviews. The reviews are sorted by 'Most Helpful' and include the following text:

- Ms. ★★★★★** by GamerG... - Version 1.1 - Nov 12, 2010
Garbage! Doesn't open! Waste of money, Doesn't deserve any stars!
Was this review helpful? Yes | No
- Stupid ★★★★★** by Hjjrdhy - Version 1.1 - Nov 17, 2010
Won't open
Was this review helpful? Yes | No
- Crap ★★★★★** by Bryce motley eldon - Version 1.1 - Nov 24, 2010
It crashes and not worth the money!!!!!!
Was this review helpful? Yes | No

Three Development Tools

Enhanced to help keep you in your chair

iOS Simulator

Xcode

UI Automation

Where Do Apps Commonly Fail?

...and how you can make sure yours doesn't

**“Your application
doesn’t do anything!”**

A new user who accidentally hit “Cancel” on the location prompt

Respecting Users' Privacy Decisions

- Be prepared for all scenarios
- The best apps
 - Continue to function
 - Degrade gracefully
 - Make the user aware of the limitations of their choice

iOS Simulator

Xcode

UI Automation

Location Services and iOS Simulator

- A bona fide simulation of device-location features
 - Location prompt
 - Status-bar icon
 - Location Services menu
 - Authorization states
 - Reset location warnings

Demo

“Votre application ne fonctionne pas pour moi!”

A user in France, who lives in a city not covered by your data provider

Handling Different Regions of the World

- Identify and verify data-coverage limitations
- Find additional sources if necessary
- Consider appropriate regions for sale

iOS Simulator

Xcode

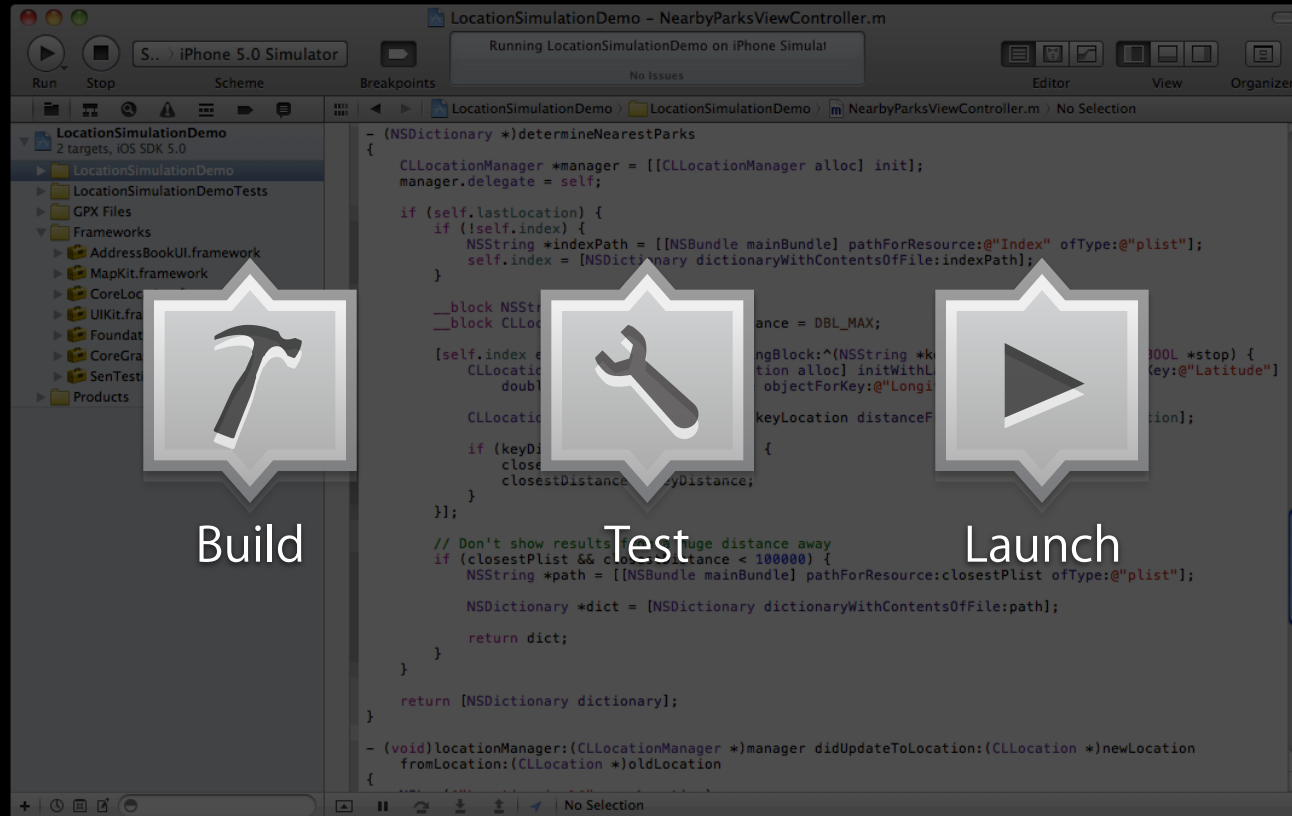

UI Automation

Location Services and Xcode

- Location support in multiple Xcode components
 - Schemes
 - Debugger
 - Unit tests
- Allows simulation of various scenarios
 - Specific location
 - Major cities
 - GPX file
- Device and simulator support

Xcode Schemes

Build

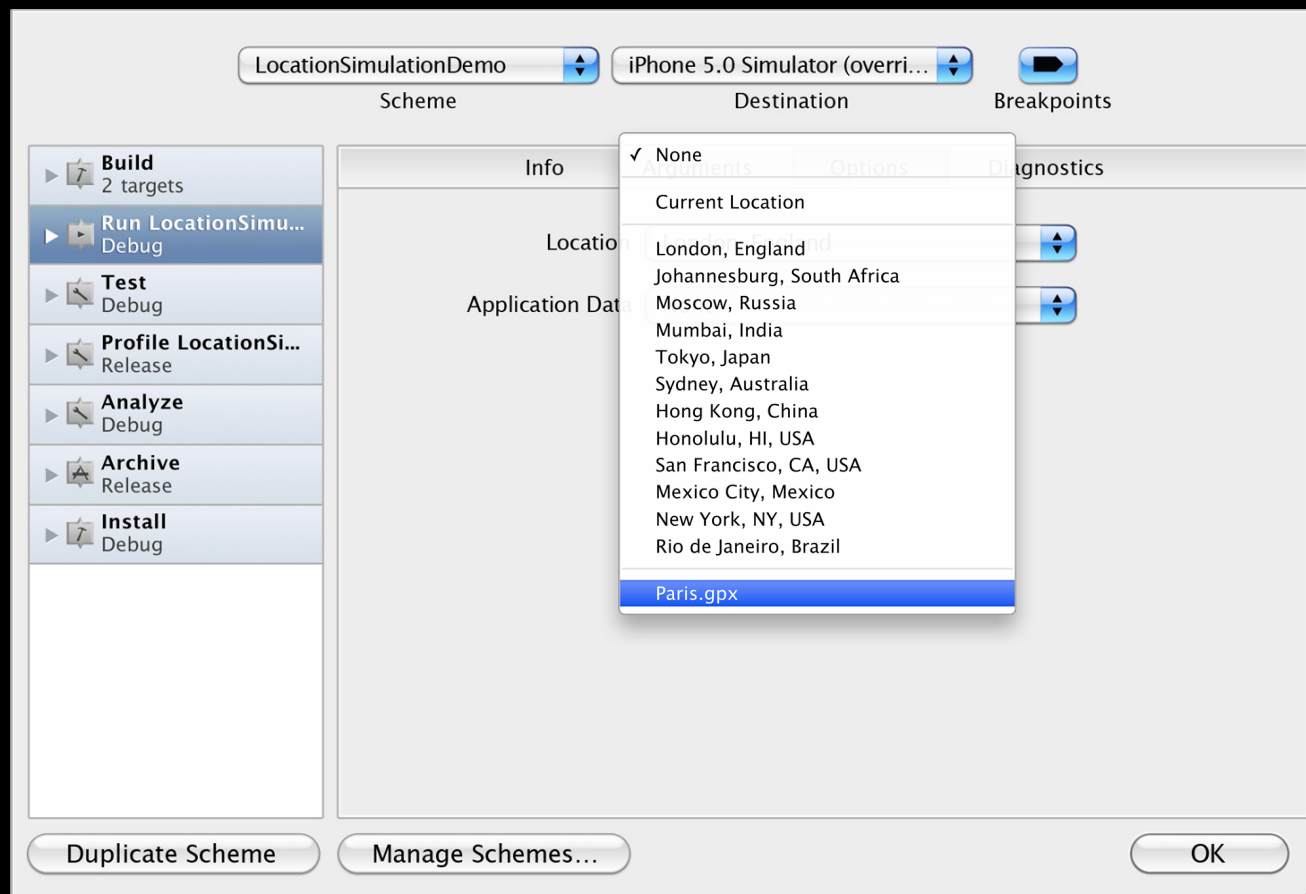

Test

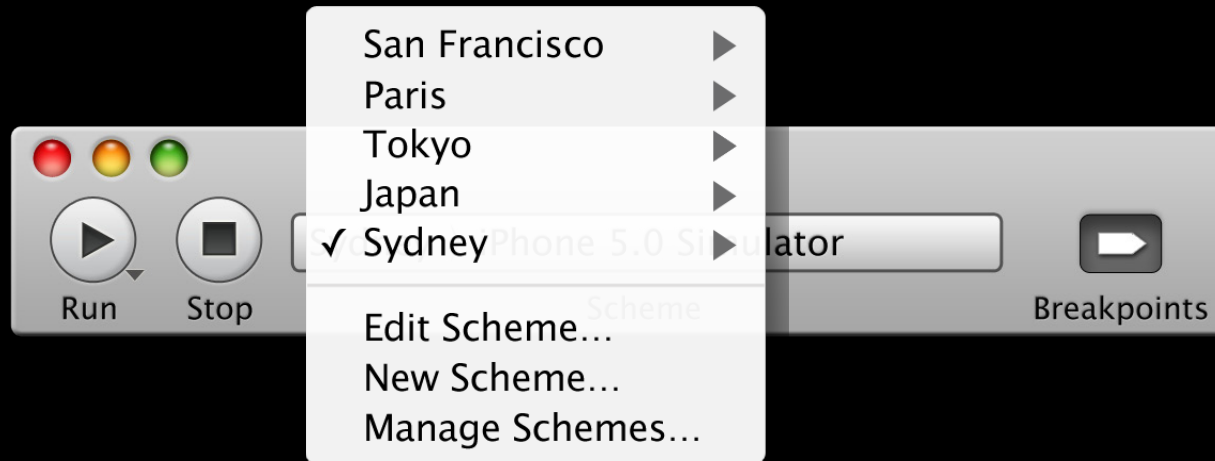

Launch

Simulating Locations Using Schemes

Xcode Schemes

Location in the Debugger

The screenshot shows a debugger window titled "LocationSimulationDemo". On the left, a "Local" pane is visible. A "Current Location" menu is open, listing various cities: London, England; Johannesburg, South Africa; Moscow, Russia; Mumbai, India; Tokyo, Japan; Sydney, Australia; Hong Kong, China; Honolulu, HI, USA; San Francisco, CA, USA; Mexico City, Mexico; New York, NY, USA; Rio de Janeiro, Brazil; and Paris.gpx. The "All Output" pane on the right displays the following text:

```
GNU gdb 6.3.60-20050815 (Apple version gdb-1700.2) (Thu May 19 01:38:32 UTC 2011)
Copyright 2004 Free Software Foundation, Inc.
GDB is free software, covered by the GNU General Public License, and you are welcome to change it and/or distribute copies of it under certain conditions.
Type "show copying" to see the conditions.
There is absolutely no warranty for GDB. Type "show warranty" for details.
This GDB was configured as "x86_64-apple-darwin".sharedlibrary apply-load-rules all
Attaching to process 8261.
*** ImageIO - could not find ColorSync function 'ColorSyncProfileCreateWithName'
*** ImageIO - could not find ColorSync function 'ColorSyncProfileCopyData'
```

Demo

“Your application can’t find me at all!”

A commuter, who uses your application in the subway

Handling Difficult Environments

- Not all devices have a GPS receiver
- GPS will not always be available
- The best applications
 - Function with less accurate positions
 - Smooth out temporary location outages (where possible)
 - Let the user know about the problem

iOS Simulator

Xcode

UI Automation

UI Automation

- Accessible from Instruments
- Javascript-based API
- Device and simulator support

Location Services and UI Automation

- With iOS 5, simulate location changes via UI Automation
- Allows control over all aspects of the location
 - Coordinate
 - Horizontal accuracy
 - Speed
 - Course
 - Altitude
 - Vertical accuracy

Location Services and UI Automation

- Test a variety of accuracies your users are likely to see
- The CLLocationAccuracy constants are a good start
 - `kCLLocationAccuracyNearestTenMeters`
 - `kCLLocationAccuracyHundredMeters`
 - `kCLLocationAccuracyKilometer`
 - `kCLLocationAccuracyThreeKilometers`
- Test what happens when location is unavailable

Demo

Other Simulator Support

- Background-location services
- Significant location change
- Region monitoring

Demo

Summary

- Testing is difficult, but it's worth it!
- Use the tools to make testing easier and improve coverage
 - iOS Simulator
 - Xcode
 - UI Automation
- Always test on a real device
- Sit back and wait for the reviews to come in...

“Cette application est incroyable!”

An overjoyed user, who can't wait to tell her friends about your application

Q&A
