# Smart Magnification

## Human interface guidelines

- Simple

- Currently at 100%—magnify to 150%

- Currently not 100%—magnify to 100%

# Smart Magnification

## Human interface guidelines

- Simple

  - Currently at 100%—magnify to 150%

  - Currently not 100%—magnify to 100%

- Complex

  - Magnify such that the width of the target grouping fits inside the scroll view, centering the target point vertically, if possible; magnify to 100% if the mouse hasn't moved and already magnified to the deepest grouping

# Smart Magnification

## Human interface guidelines

Use NSScrollView

# NSScrollView Gesture Adoption

# NSScrollView Gesture Adoption

- Magnification
- Smart magnification

*Demo*

NSScrollView Gesture Adoption

# NSScrollView Gesture Adoption

## Magnification

NSApp routes to Dictionary lookup

*Demo*

Quick Look

# Best Practices

Attempts at future proofing

# Best Practices

- Use built-in implementations

# Best Practices

- Use built-in implementations
- Observe NSClipView bounds

# Best Practices

- Use built-in implementations
- Observe NSClipView bounds

```
NSViewBoundsDidChangeNotification
```

# Best Practices

- Use built-in implementations
- Observe NSClipView bounds

```
[[NSNotificationCenter defaultCenter] addObserver:self  
selector:@selector(boundsChanged:)  
name:NSViewBoundsDidChangeNotification  
object:[scrollView contentView]]
```

# Best Practices

- Use built-in implementations
- Observe NSClipView bounds
- Forward end and cancelled gesture event

# Best Practices

- Use built-in implementations
- Observe NSClipView bounds
- Forward end and cancelled gesture event
- Forward scrollWheel events with end and cancelled phases

# Summary

# Summary

- API hooks for Smart Magnify and Quick Look gestures

# Summary

- API hooks for Smart Magnify and Quick Look gestures
- NSScrollView has built-in support for magnification

# Summary

- API hooks for Smart Magnify and Quick Look gestures
- UIScrollView has built-in support for magnification
- NSPageController
