Switch Control

The screenshot shows the 'Default Panels' window in macOS. The title bar reads 'Default Panels'. The toolbar contains 'Preview' (play icon), 'Add' (+ icon), 'Group' (two overlapping squares), and 'Ungroup' (two overlapping squares with arrows). The main area displays an 'ANSI Keyboard' layout on a grid background. A dark grey bar at the top of the keyboard is labeled 'Typing Suggestions'. The keyboard keys are arranged in a standard QWERTY layout. On the right side, the 'Inspector' panel is visible, featuring an information icon (i) and two sections: 'Context' and 'Visibility'. The 'Context' section has a 'Show for applications:' label and a dropdown menu currently set to 'Select Apps...'. Below this, the text 'None.' is displayed. The 'Visibility' section contains two checkboxes: 'Show in panels list' (checked) and 'Default keyboard' (unchecked).

Security & Privacy

Show All

General | FileVault | Firewall | Privacy

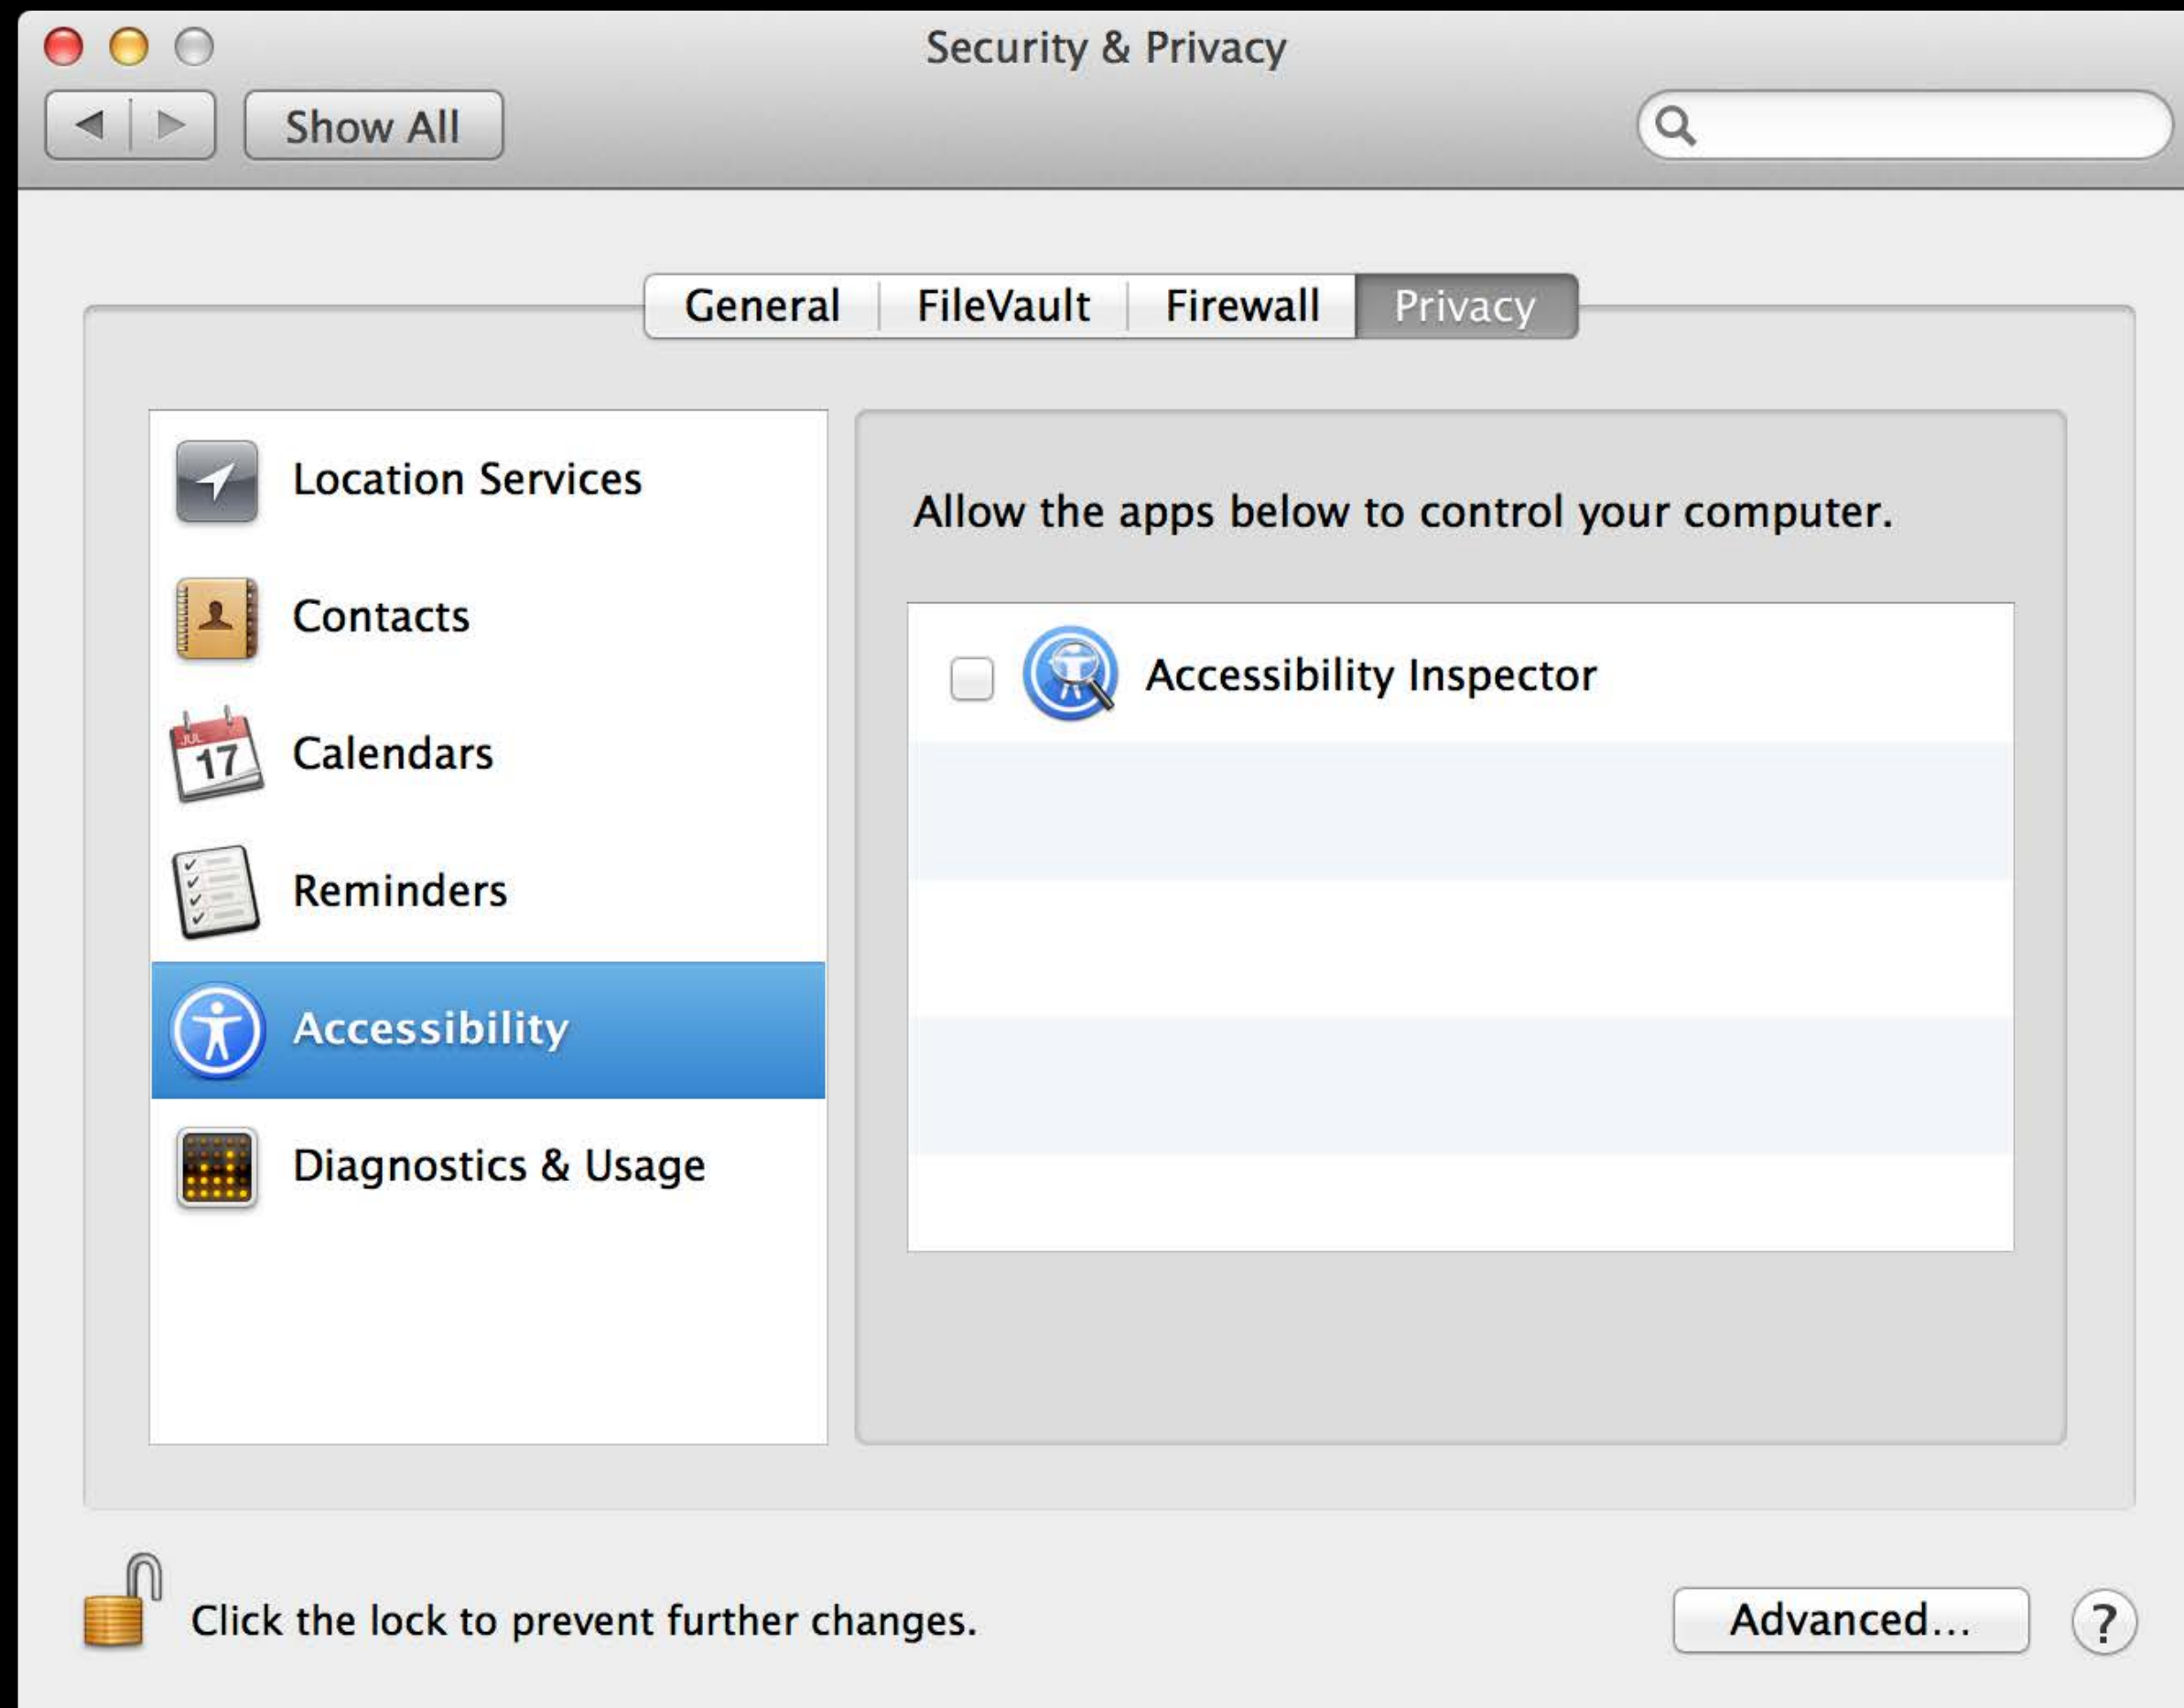

- Location Services
- Contacts
- Calendars
- Reminders
- Diagnostics & Usage

Apps that have requested access to your calendars will appear here.

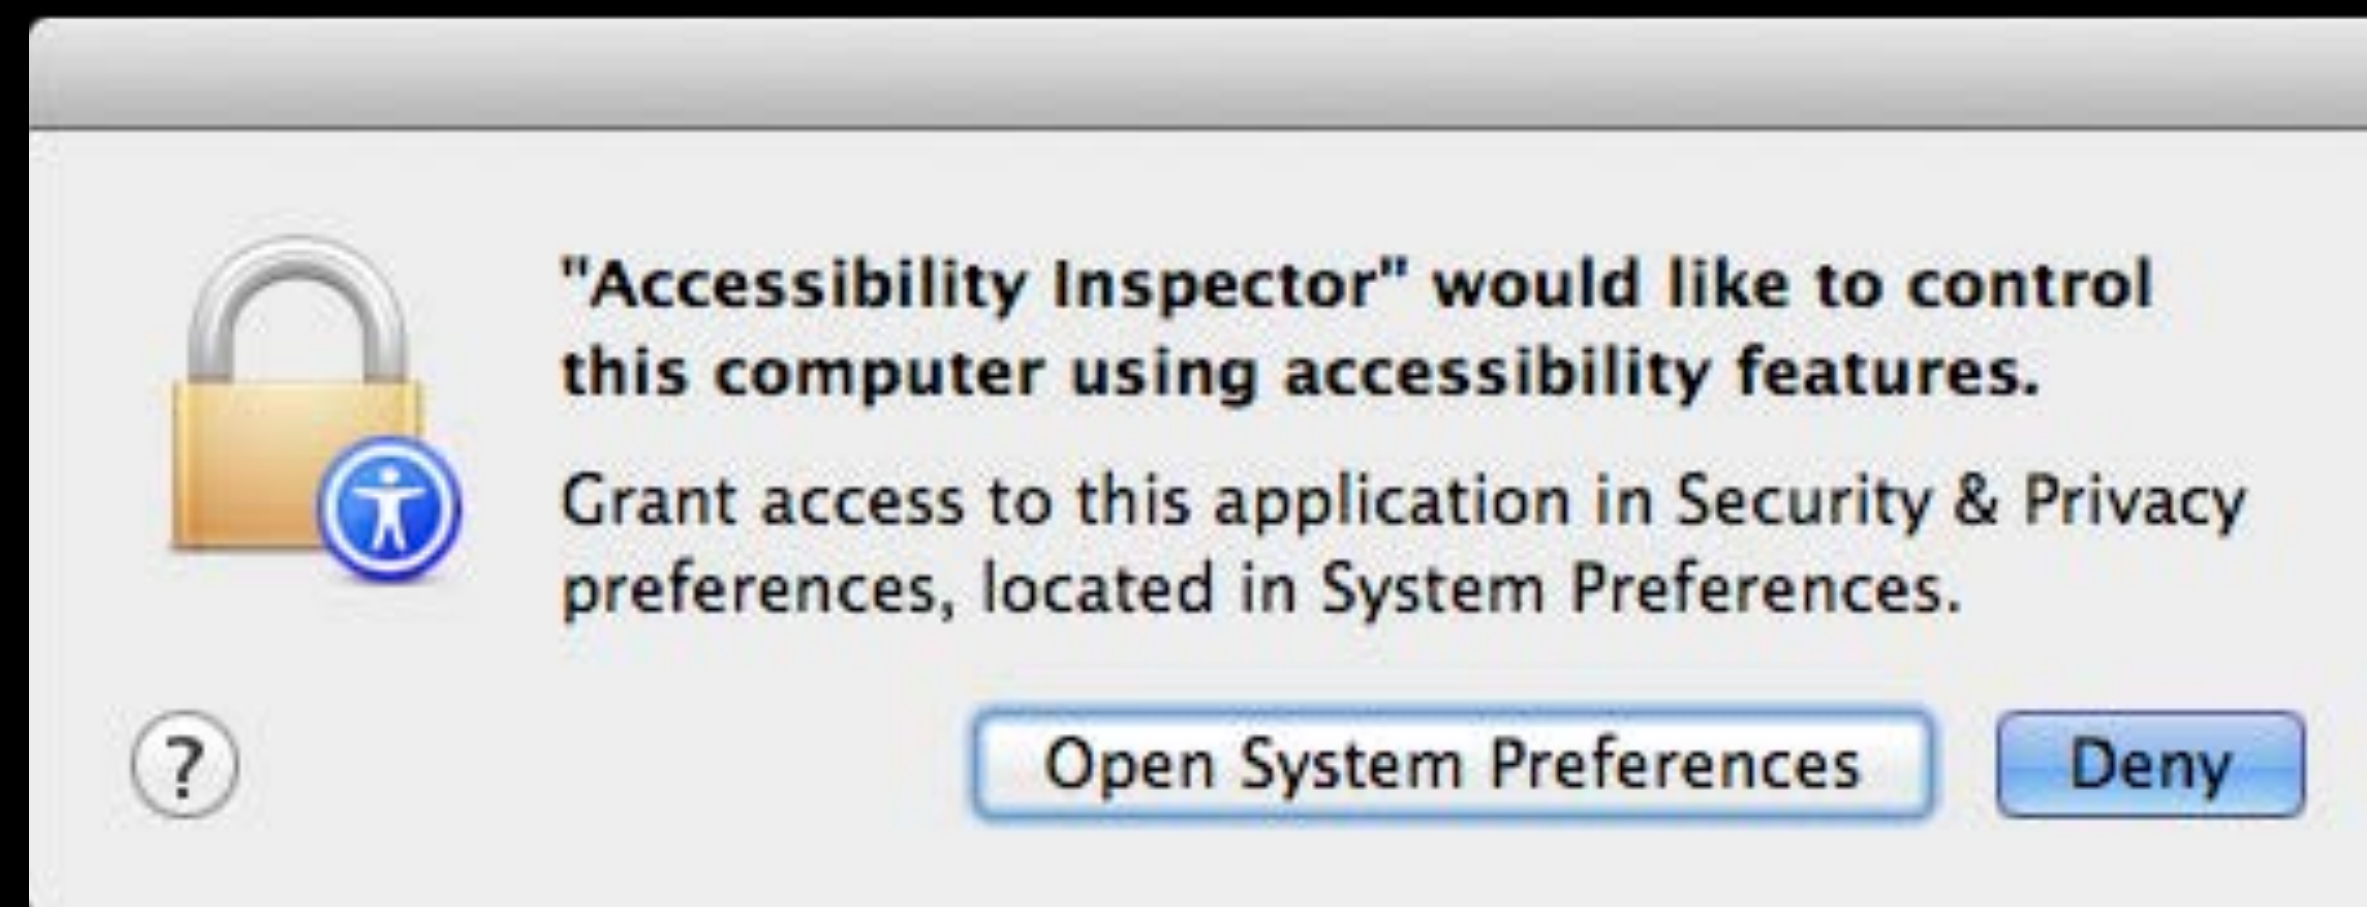

Click the lock to prevent further changes.

Advanced... ?

The image shows a macOS Security & Privacy window. At the top, there are window control buttons (red, yellow, green) and the title "Security & Privacy". Below the title bar, there are navigation arrows, a "Show All" button, and a search field. The main content area has four tabs: "General", "FileVault", "Firewall", and "Privacy", with "Privacy" selected. On the left side of the Privacy tab, there is a list of services: "Location Services" (with a location pin icon), "Contacts" (with a person icon), "Calendars" (with a calendar icon showing the number 17), "Reminders" (with a checklist icon), and "Diagnostics & Usage" (with a grid icon). The right side of the Privacy tab is currently empty, displaying the text "Apps that have requested access to your calendars will appear here." At the bottom of the window, there is a lock icon and the text "Click the lock to prevent further changes.", an "Advanced..." button, and a help icon (a question mark in a circle).

Security

Secure Usage of Accessibility API

For assistive software

- New method

```
Boolean AXIsProcessTrustedWithOptions(CFDictionaryRef options);
```

Available option Key: `kAXTrustedCheckOptionPrompt`

Prompt End User for Permission

- During Application launch time

```
- (void)applicationDidFinishLaunching:(NSNotification *)aNotification
{
    CFMutableDictionaryRef options = CFDictionaryCreateMutable(NULL, 0,
        &kCFTypedDictionaryKeyCallbacks, &kCFTypedDictionaryValueCallbacks);

    CFDictionarySetValue(options, kAXTrustedCheckOptionPrompt, kCFBooleanTrue);

    AXIsProcessTrustedWithOptions(options);

    CFRelease(options);
}
```
