

What's New in Camera Capture

A plethora of API enhancements

Session 610

Brad Ford

Core Media Engineering

These are confidential sessions—please refrain from streaming, blogging, or taking pictures

What You Will Learn

- Greater transparency for users
- New AV Foundation capture features in iOS 7
- Sample code update

What You Will Not Learn

- CoreMedia basics
- AV Foundation basics
- Review prior WWDC camera sessions in the WWDC app

What's New in Camera Capture

- Greater transparency for users
- New AV Foundation capture features in iOS 7
- Sample code update

Greater Transparency for Users

iOS 6 Camera Ecosystem (Review)

- Photos and videos are personal, sensitive data
- iOS 6 introduced a prompt for access to AssetsLibrary

iOS 6 Camera Ecosystem (Review)

- Photos and videos are personal, sensitive data
- iOS 6 introduced a prompt for access to AssetsLibrary

iOS 6 Camera Ecosystem (Review)

- Photos and videos are personal, sensitive data
- iOS 6 introduced a prompt for access to AssetsLibrary

- Reminder: Handle errors from ALAssetsLibrary methods

Greater Transparency for Users

Greater Transparency for Users

- iOS devices have no “recording in progress” lights

Greater Transparency for Users

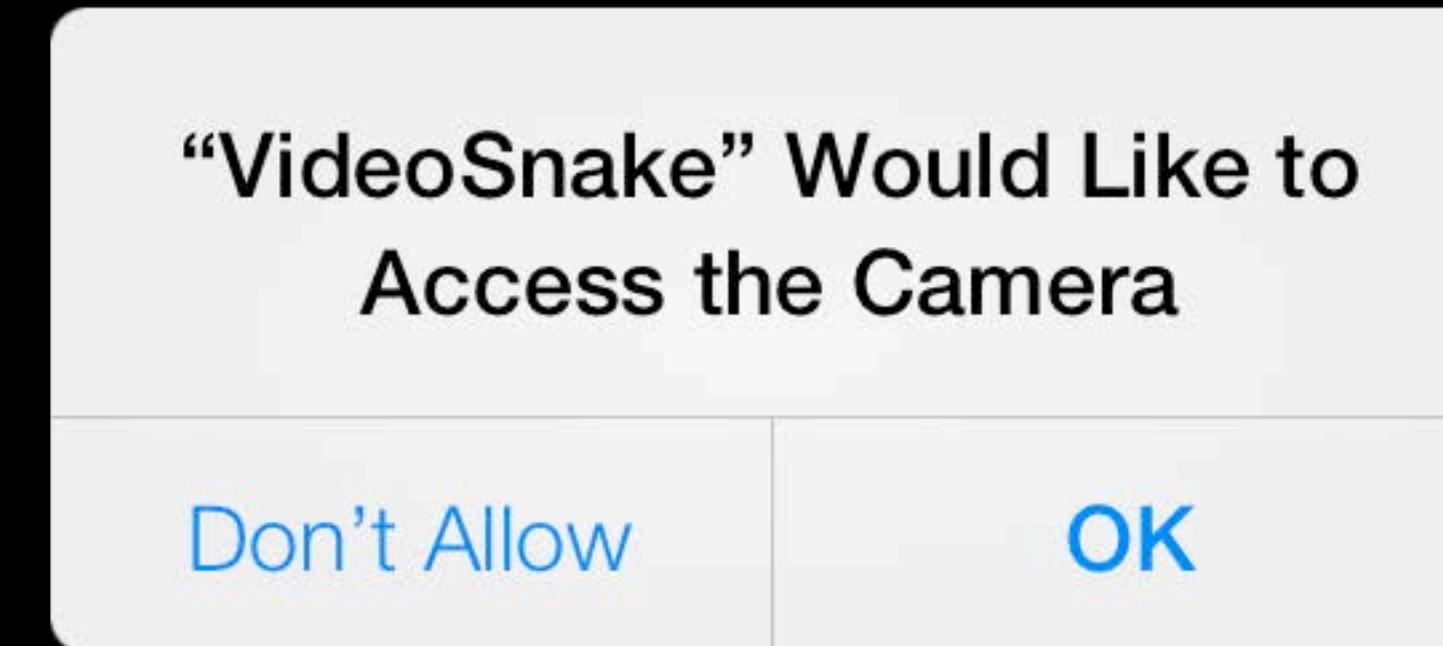

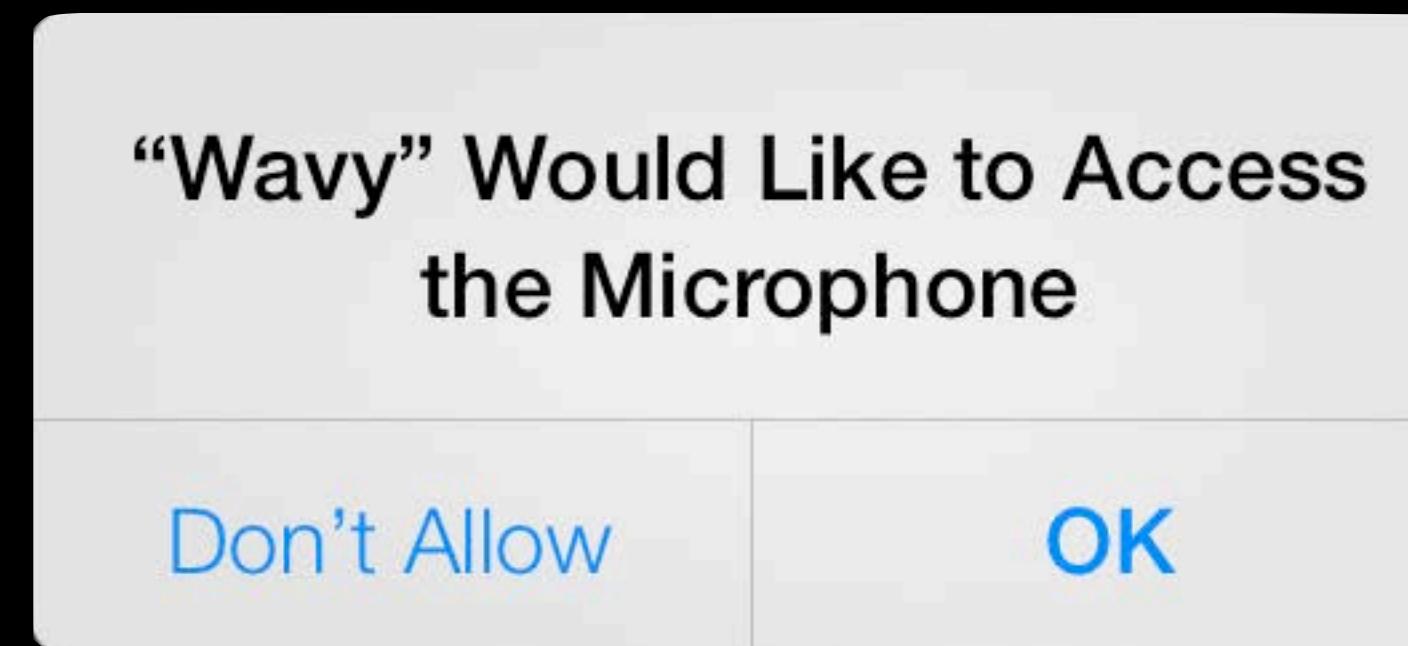

- iOS devices have no “recording in progress” lights
- AV Foundation APIs present no “recording in progress” UI

Greater Transparency for Users

- iOS devices have no “recording in progress” lights
- AV Foundation APIs present no “recording in progress” UI
- In some regions, law requires user consent to use the camera or mic

Greater Transparency for Users

- iOS devices have no “recording in progress” lights
- AV Foundation APIs present no “recording in progress” UI
- In some regions, law requires user consent to use the camera or mic

Greater Transparency for Users

Greater Transparency for Users

- First-time AVCaptureDeviceInput creation invokes dialog

Greater Transparency for Users

- First-time `AVCaptureDeviceInput` creation invokes dialog

```
AVCaptureDeviceInput *di =  
    [AVCaptureDeviceInput deviceInputWithDevice:device error:&error];
```

Greater Transparency for Users

- First-time `AVCaptureDeviceInput` creation invokes dialog

```
AVCaptureDeviceInput *di =  
    [AVCaptureDeviceInput deviceInputWithDevice:device error:&error];
```

- `AVCaptureDeviceInput` creation succeeds

Greater Transparency for Users

- First-time `AVCaptureDeviceInput` creation invokes dialog

```
AVCaptureDeviceInput *di =  
    [AVCaptureDeviceInput deviceInputWithDevice:device error:&error];
```

- `AVCaptureDeviceInput` creation succeeds

- Mic produces silence until user grants access

Greater Transparency for Users

- First-time `AVCaptureDeviceInput` creation invokes dialog

```
AVCaptureDeviceInput *di =  
    [AVCaptureDeviceInput deviceInputWithDevice:device error:&error];
```

- `AVCaptureDeviceInput` creation succeeds

- Mic produces silence until user grants access
- Camera produces black frames until user grants access

Greater Transparency for Users

- First-time `AVCaptureDeviceInput` creation invokes dialog

```
AVCaptureDeviceInput *di =  
    [AVCaptureDeviceInput deviceInputWithDevice:device error:&error];
```

- `AVCaptureDeviceInput` creation succeeds
 - Mic produces silence until user grants access
 - Camera produces black frames until user grants access
- Subsequent `DeviceInput` creation fails if user denied access

Greater Transparency for Users

- First-time `AVCaptureDeviceInput` creation invokes dialog

```
AVCaptureDeviceInput *di =  
    [AVCaptureDeviceInput deviceInputWithDevice:device error:&error];
```

- `AVCaptureDeviceInput` creation succeeds
 - Mic produces silence until user grants access
 - Camera produces black frames until user grants access
- Subsequent `DeviceInput` creation fails if user denied access
- Check for `AVErrorApplicationIsNotAuthorizedToDevice`

What's New in Camera Capture

- Greater transparency for users
- New AV Foundation capture features in iOS 7
- Sample code update

iOS 7 AV Foundation Capture APIs

A veritable smörgåsbord of enhancements

New in iOS 7

- 60 FPS support
- Video zoom
- Machine Readable Code detection
- Focus enhancements
- Integration with application AudioSession

New in iOS 7

- 60 FPS support
- Video zoom
- Machine Readable Code detection
- Focus enhancements
- Integration with application AudioSession

60 FPS Support

60 FPS Support

- Full iOS ecosystem support for high frame-rate content

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames
- Playback

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames
- Playback
 - Enhanced audio processing support for slow and fast playback

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames
- Playback
 - Enhanced audio processing support for slow and fast playback
- Editing

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames
- Playback
 - Enhanced audio processing support for slow and fast playback
- Editing
 - Full support for scaled edits in mutable compositions

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames
- Playback
 - Enhanced audio processing support for slow and fast playback
- Editing
 - Full support for scaled edits in mutable compositions
- Export

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames
- Playback
 - Enhanced audio processing support for slow and fast playback
- Editing
 - Full support for scaled edits in mutable compositions
- Export
 - Variable frame rate preservation (slow and fast motion)

60 FPS Support

- Full iOS ecosystem support for high frame-rate content
- Capture
 - 720p60 support with video stabilization and droppable P-Frames
- Playback
 - Enhanced audio processing support for slow and fast playback
- Editing
 - Full support for scaled edits in mutable compositions
- Export
 - Variable frame rate preservation (slow and fast motion)
 - Frame rate conversion to 30 FPS output

Demo

SloPoke

60 FPS Support

Playback

60 FPS Support

Playback

- AVPlayer slows down content automatically using [player setRate:]

60 FPS Support

Playback

- AVPlayer slows down content automatically using [player setRate:]
- New property [playerItem setAudioTimePitchAlgorithm:]

Time Pitch Algorithm	Quality	Snaps to Specific Rates	Rate Range
LowQualityZeroLatency	Low, suitable for FF / Rew or low quality voice	YES	0.5 - 2 x
TimeDomain	Modest, less expensive, suitable for voice	NO	0.5 - 2 x
Spectral	Highest, most expensive, preserves pitch	NO	1/32 - 32 x
Varispeed	High, no pitch correction	NO	1/32 - 32 x

60 FPS Support

Editing

60 FPS Support

Editing

- Use `AVMutableComposition` to build up temporal edits

60 FPS Support

Editing

- Use AVMutableComposition to build up temporal edits

```
mutableComposition = [AVMutableComposition composition];
```

60 FPS Support

Editing

- Use AVMutableComposition to build up temporal edits

```
mutableComposition = [AVMutableComposition composition];
[mutableComposition insertTimeRange:ofAsset:atTime:error:];
```

60 FPS Support

Editing

- Use AVMutableComposition to build up temporal edits

```
mutableComposition = [AVMutableComposition composition];
[mutableComposition insertTimeRange:ofAsset:atTime:error:];
[mutableComposition scaleTimeRange:toDuration:];
```

60 FPS Support

Editing

- Use `AVMutableComposition` to build up temporal edits

```
mutableComposition = [AVMutableComposition composition];
[mutableComposition insertTimeRange:ofAsset:atTime:error:];
[mutableComposition scaleTimeRange:toDuration:];
```

- See `SloPoke` Sample code for reference

60 FPS Support

Export

60 FPS Support

Export

- Use AVAssetExportSession

60 FPS Support

Export

- Use AVAssetExportSession
 - “Flatten” a mutable composition into a new movie

60 FPS Support

Export

- Use AVAssetExportSession
 - “Flatten” a mutable composition into a new movie
 - Use AVAssetExportPresetPassthrough to avoid re-encoding

60 FPS Support

Export

- Use AVAssetExportSession
 - “Flatten” a mutable composition into a new movie
 - Use AVAssetExportPresetPassthrough to avoid re-encoding
 - Constant frame rate export

60 FPS Support

Export

- Use AVAssetExportSession
 - “Flatten” a mutable composition into a new movie
 - Use AVAssetExportPresetPassthrough to avoid re-encoding
 - Constant frame rate export
 - Set `videoComposition.frameDuration`

60 FPS Support

Export

- Use AVAssetExportSession
 - “Flatten” a mutable composition into a new movie
 - Use AVAssetExportPresetPassthrough to avoid re-encoding
 - Constant frame rate export
 - Set `videoComposition.frameDuration`
 - Maximum playback compatibility

60 FPS Support

Export

- Use AVAssetExportSession
 - “Flatten” a mutable composition into a new movie
 - Use AVAssetExportPresetPassthrough to avoid re-encoding
 - Constant frame rate export
 - Set `videoComposition.frameDuration`
 - Maximum playback compatibility
 - Use new [exportSession setAudioTimePitchAlgorithm:]

60 FPS Support

Export

- Use AVAssetExportSession
 - “Flatten” a mutable composition into a new movie
 - Use AVAssetExportPresetPassthrough to avoid re-encoding
 - Constant frame rate export
 - Set `videoComposition.frameDuration`
 - Maximum playback compatibility
 - Use new [exportSession setAudioTimePitchAlgorithm:]
- See **SloPoke** Sample code for reference

60 FPS Support

Recording

60 FPS Support

Recording

- `AVCaptureMovieFileOutput` capture works automatically

60 FPS Support

Recording

- `AVCaptureMovieFileOutput` capture works automatically
- `AVAssetWriter` capture requires some set-up

60 FPS Support

Recording

- `AVCaptureMovieFileOutput` capture works automatically
- `AVAssetWriter` capture requires some set-up

`[assetWriterInput setExpectsMediaDataInRealTime:YES]`

60 FPS Support

Recording

- `AVCaptureMovieFileOutput` capture works automatically
- `AVAssetWriter` capture requires some set-up

`[assetWriterInput setExpectsMediaDataInRealTime:YES]`

- Use new `AVOutputSettingsAssistant`

60 FPS Support

Recording

- `AVCaptureMovieFileOutput` capture works automatically
- `AVAssetWriter` capture requires some set-up

`[assetWriterInput setExpectsMediaDataInRealTime:YES]`

- Use new `AVOutputSettingsAssistant`

`setSourceVideoFormat:(CMFormatDescription *)format;`

60 FPS Support

Recording

- `AVCaptureMovieFileOutput` capture works automatically
- `AVAssetWriter` capture requires some set-up

`[assetWriterInput setExpectsMediaDataInRealTime:YES]`

- Use new `AVOutputSettingsAssistant`

```
setSourceVideoFormat:(CMFormatDescription *)format;  
setSourceVideoAverageFrameDuration:(CMTime)duration;
```

60 FPS Support

Recording

- `AVCaptureMovieFileOutput` capture works automatically
- `AVAssetWriter` capture requires some set-up

`[assetWriterInput setExpectsMediaDataInRealTime:YES]`

- Use new `AVOutputSettingsAssistant`

```
setSourceVideoFormat:(CMFormatDescription *)format;  
setSourceVideoAverageFrameDuration:(CMTime)duration;  
- (NSDictionary *)videoSettings;
```

60 FPS Support

Configuring Capture for 60 FPS

60 FPS Support

Configuring Capture for 60 FPS

- iOS 6 and earlier

60 FPS Support

Configuring Capture for 60 FPS

- iOS 6 and earlier

```
[avCaptureSession setSessionPreset:aPreset];
```

60 FPS Support

Configuring Capture for 60 FPS

- iOS 6 and earlier

```
[avCaptureSession setSessionPreset:aPreset];
```

- Session configures inputs and outputs for the given preset

60 FPS Support

Configuring Capture for 60 FPS

- iOS 6 and earlier

```
[avCaptureSession setSessionPreset:aPreset];
```

- Session configures inputs and outputs for the given preset

- iOS 7—A parallel configuration mechanism

60 FPS Support

Configuring Capture for 60 FPS

- iOS 6 and earlier

```
[avCaptureSession setSessionPreset:aPreset];
```

- Session configures inputs and outputs for the given preset

- iOS 7—A parallel configuration mechanism

- AVCaptureDevice format inspection

60 FPS Support

Configuring Capture for 60 FPS

- iOS 6 and earlier

```
[avCaptureSession setSessionPreset:aPreset];
```

- Session configures inputs and outputs for the given preset

- iOS 7—A parallel configuration mechanism

- AVCaptureDevice format inspection
 - AVCaptureDevice active format selection

60 FPS Support

Configuring Capture for 60 FPS

- iOS 6 and earlier

```
[avCaptureSession setSessionPreset:aPreset];
```

- Session configures inputs and outputs for the given preset

- iOS 7—A parallel configuration mechanism

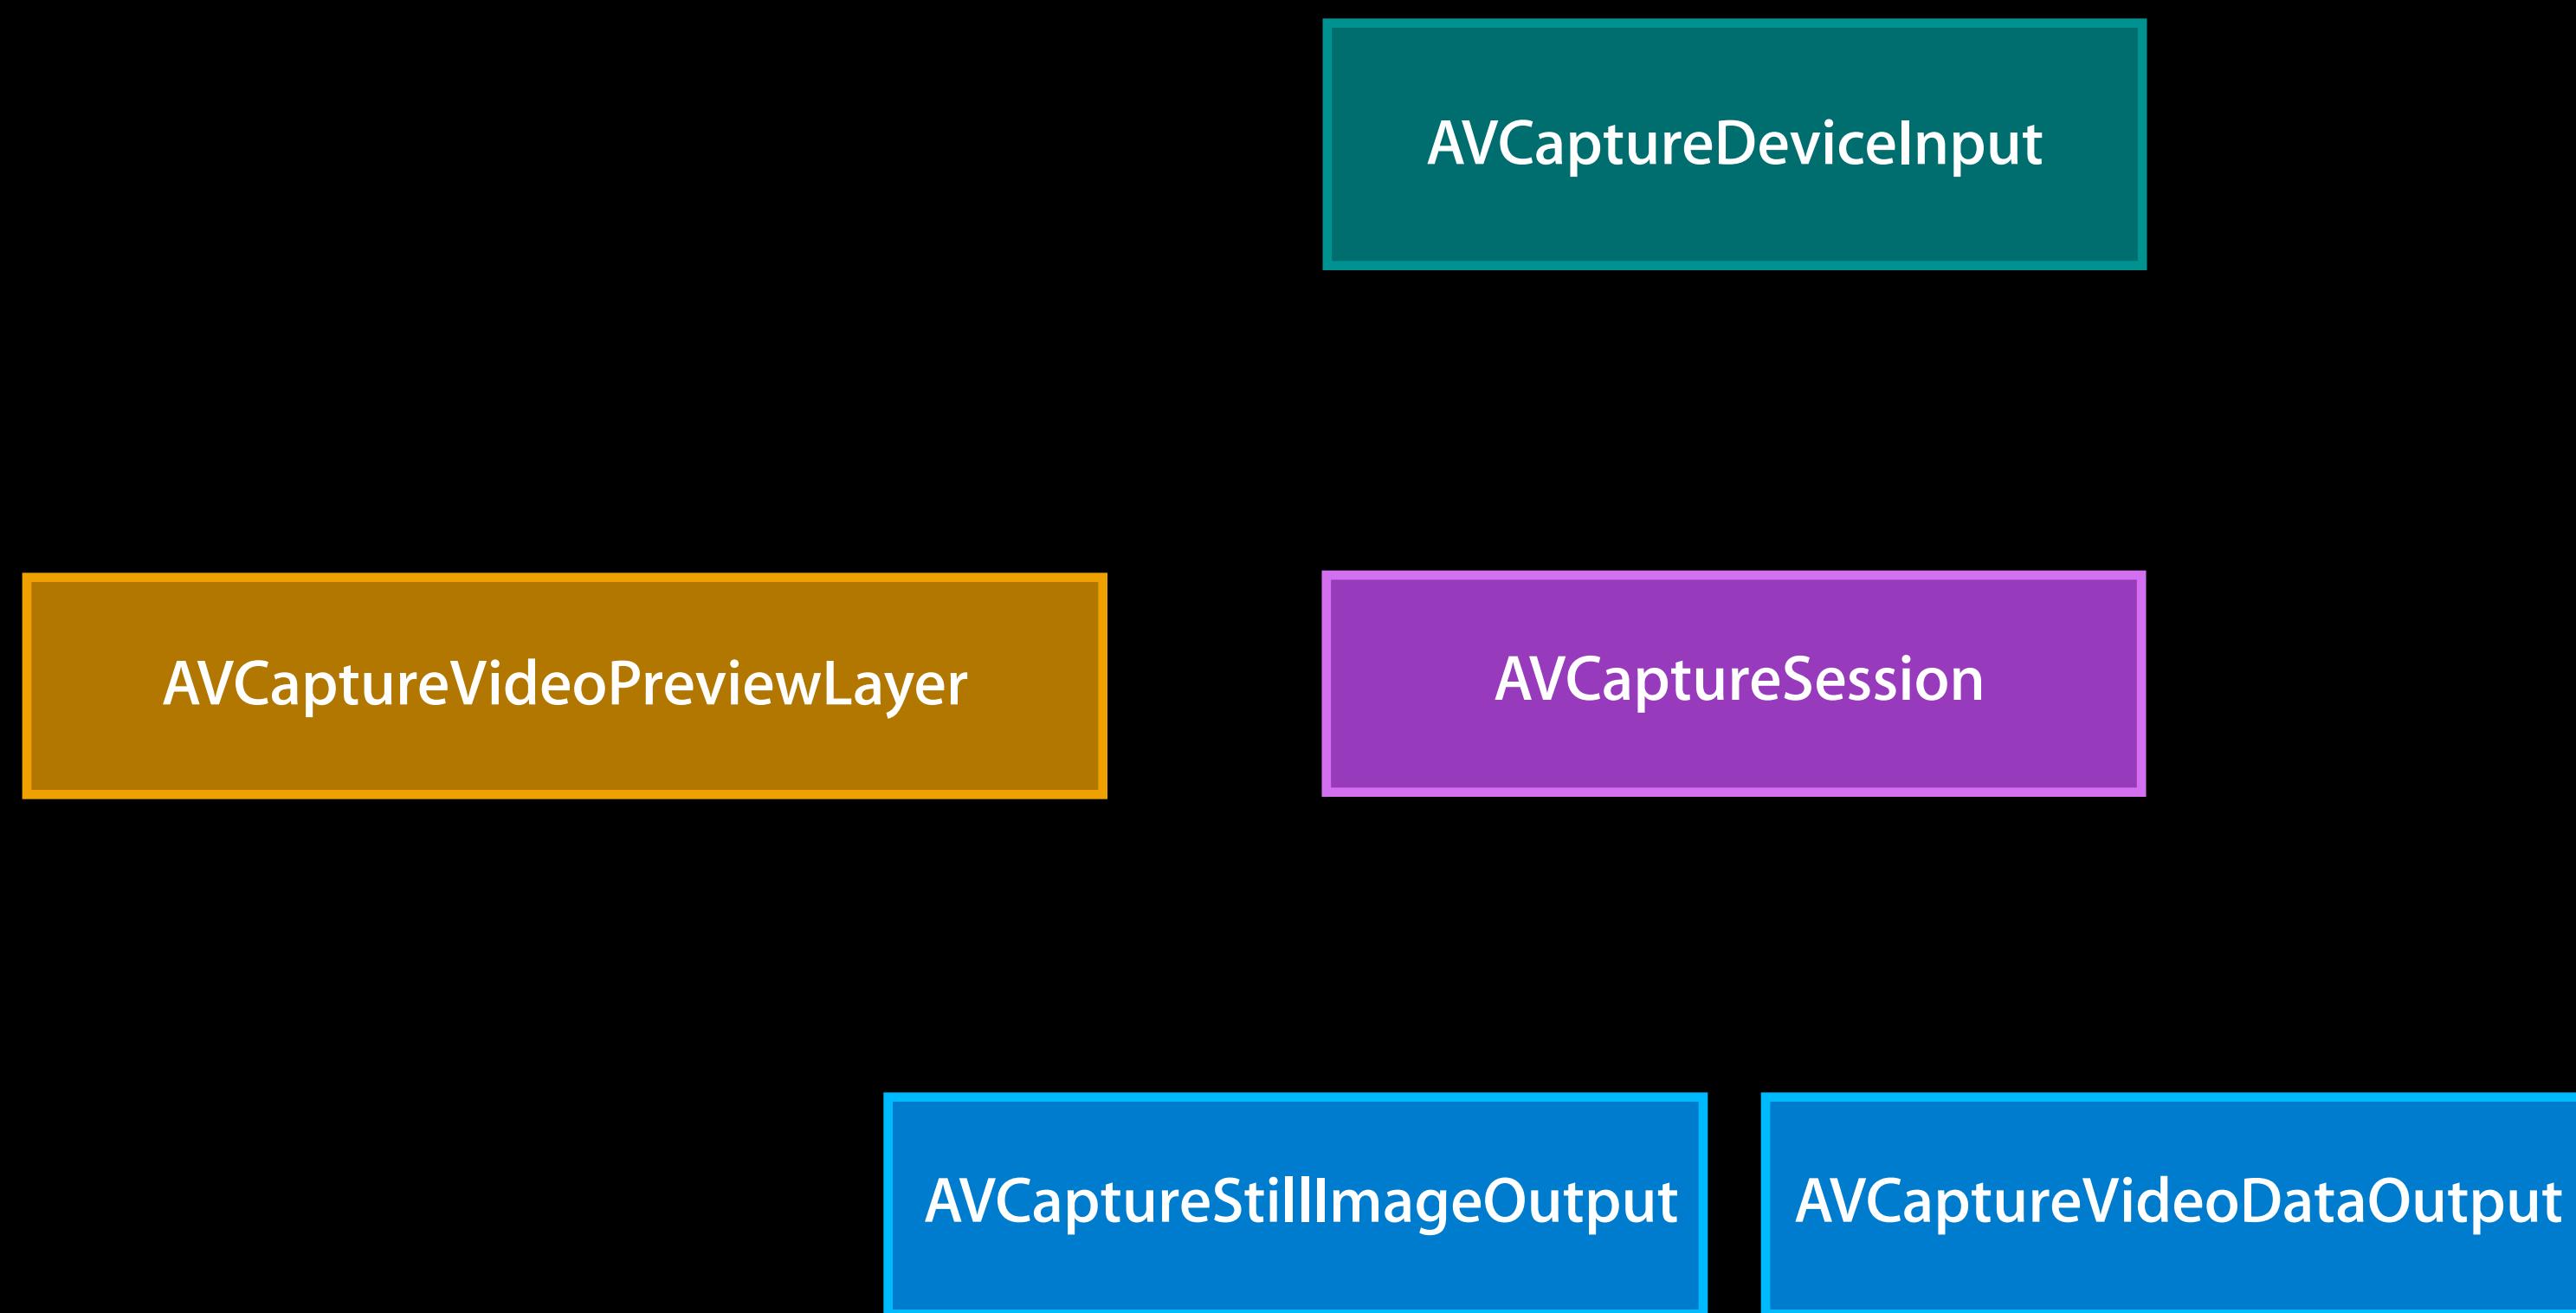

- AVCaptureDevice format inspection
 - AVCaptureDevice active format selection
 - Session no longer configures inputs and outputs automatically

1280x720 @ 60 FPS Capture

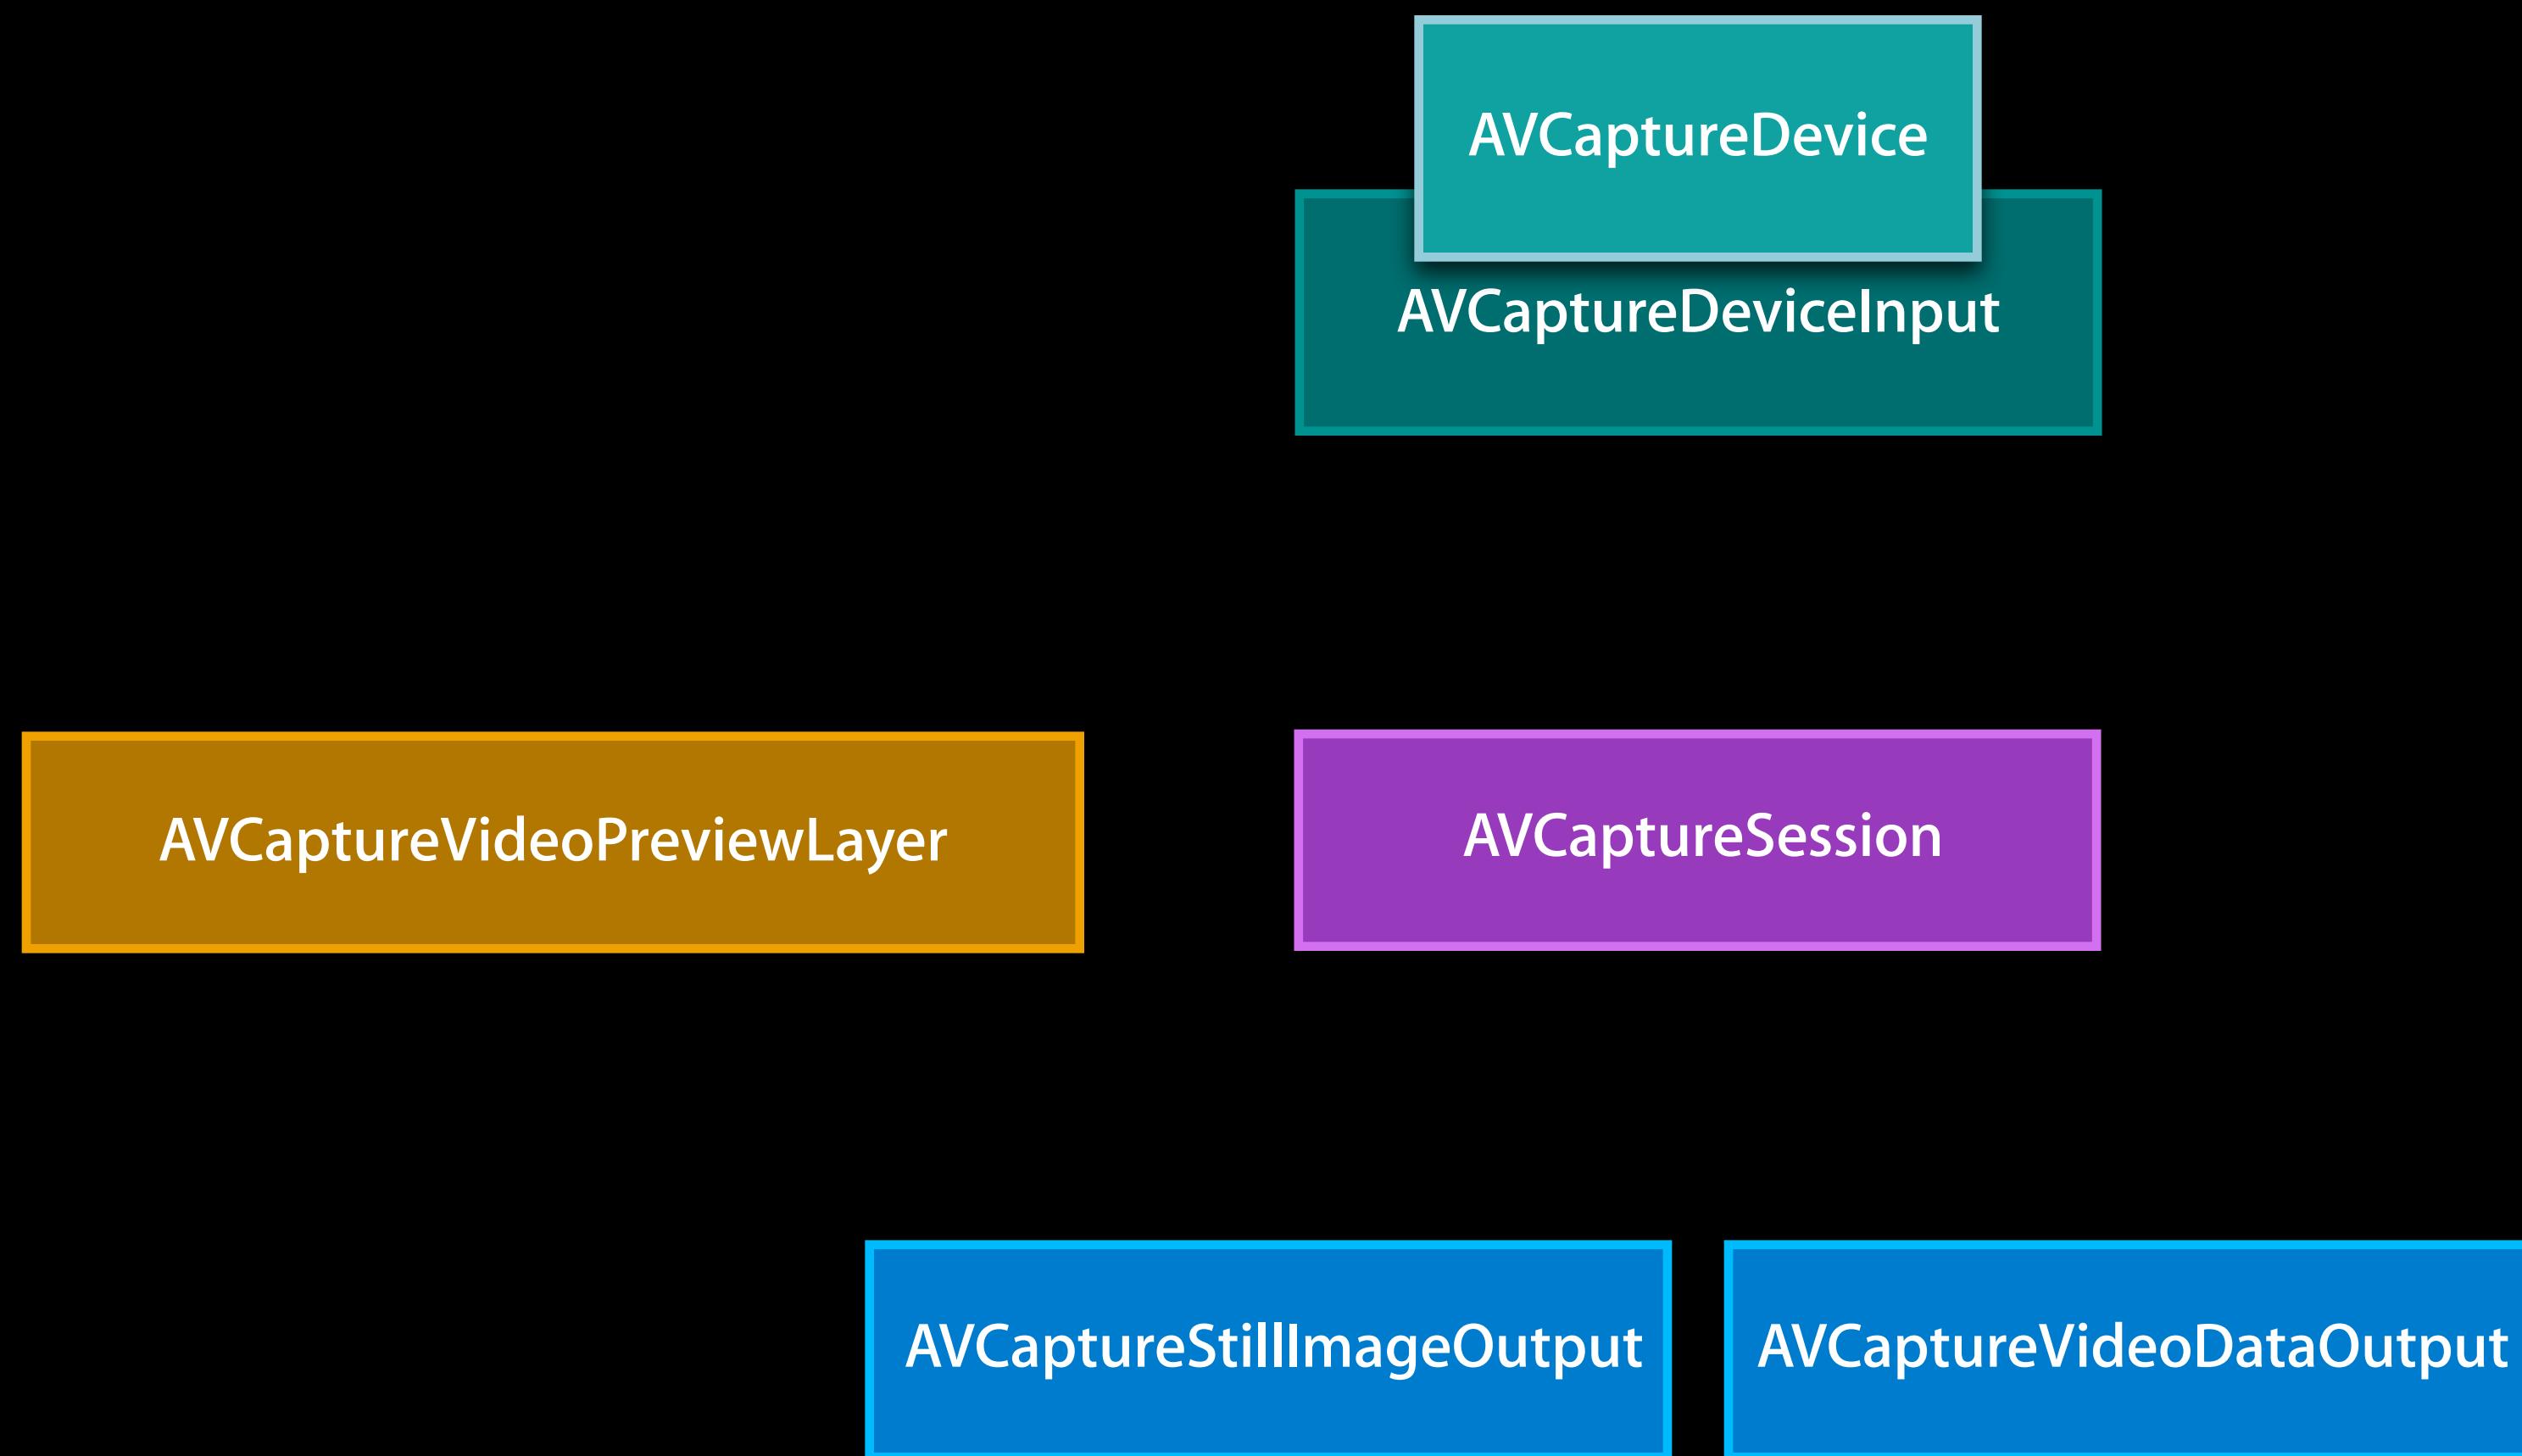

Supported platforms

iPhone 5	✓
iPod touch (5th Generation)	✓
iPad mini	✓

}
```

AVCaptureDevice Frame Rate Selection

AVCaptureDevice Frame Rate Selection

- Use AVCaptureDevice for frame rate selection

```
[device setActiveVideoMinFrameDuration:];
[device setActiveVideoMaxFrameDuration:];
```

AVCaptureDevice Frame Rate Selection

- Use AVCaptureDevice for frame rate selection

```
[device setActiveVideoMinFrameDuration:];  
[device setActiveVideoMaxFrameDuration:];
```

- AVCaptureDevice frame rates can be set any time

AVCaptureDevice Frame Rate Selection

- Use AVCaptureDevice for frame rate selection

```
[device setActiveVideoMinFrameDuration:];
[device setActiveVideoMaxFrameDuration:];
```

- AVCaptureDevice frame rates can be set any time
- Use kCMTimeInvalid to restore default frame rates

```
[device setActiveVideoMinFrameDuration:kCMTimeInvalid];
[device setActiveVideoMaxFrameDuration:kCMTimeInvalid];
```

AVCaptureDevice Frame Rate Selection

- Don't use AVCaptureConnection for frame rate selection

```
[connection setVideoMinFrameDuration:];
[connection setVideoMaxFrameDuration:];
```

iPhone 5 Back-Facing Camera Formats

Dimensions	Frame Rates	Field of View	Binned	Stabilization	Used by Preset
1280x720	1-30	53.89	No	Yes	1280x720
1280x720	1-60	51.94	Yes	Yes	

iPhone 5 Back-Facing Camera Formats

Dimensions	Frame Rates	Field of View	Binned	Stabilization	Used by Preset
1280x720	1-30	53.89	No	Yes	1280x720
1280x720	1-60	51.94	Yes	Yes	

When to Use [session setSessionPreset:]

- Presets guarantee quality of service
- Presets optimally configure outputs and inputs
- Presets provide the best “bang for the buck” camera configuration
- Presets are the preferred mechanism for simple camera apps

When to Use [device setActiveFormat:]

- When you need precise control, such as:
 - A sensor format that supports 60 FPS
 - A specific resolution with a specific field of view
 - Full-resolution video data output buffers

New in iOS 7

- 60 FPS Support
- Video zoom
- Machine Readable Code detection
- Focus enhancements
- Integration with application AudioSession

Sensor Pixels

Zoom

Normal processing

Sensor Pixels

Scaled Output Pixels
(Video Resolution)

- Video resolution is smaller than sensor resolution, we must scale down

Zoom

Cropping, not upscaling

Cropped Sensor Pixels

Scaled Output Pixels

- We can retain detail by cropping before the downscale

Zoom

Cropping, not upscaling

Cropped Sensor Pixels

Zoomed Output Pixels

- We can retain detail by cropping before the downscale

Zoom

It's not pixels all the way down

Smaller crop than output

Zoomed Output Pixels

- We can retain detail by cropping before the downscale
- But at some point we do run out of sensor pixels...

Zoom

It's not pixels all the way down

Smaller crop than output

Zoomed Output Pixels

- We can retain detail by cropping before the downscale
- But at some point we do run out of sensor pixels...

Zoom

It's not pixels all the way down

Smaller crop than output

Zoomed Output Pixels
(Upscaled)

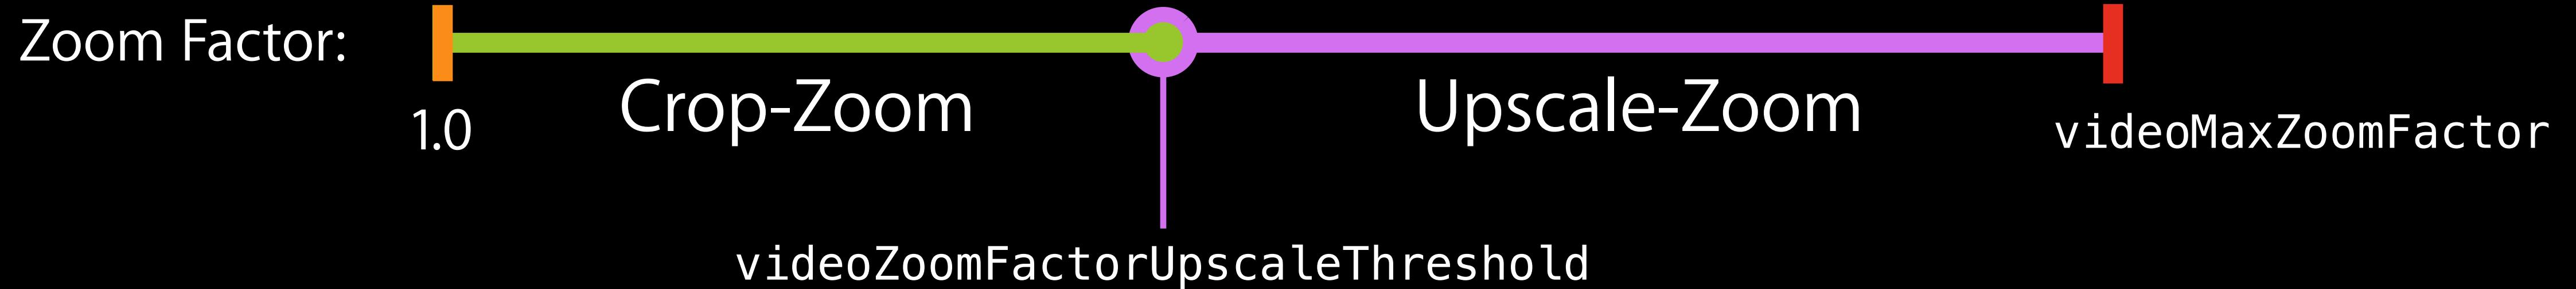

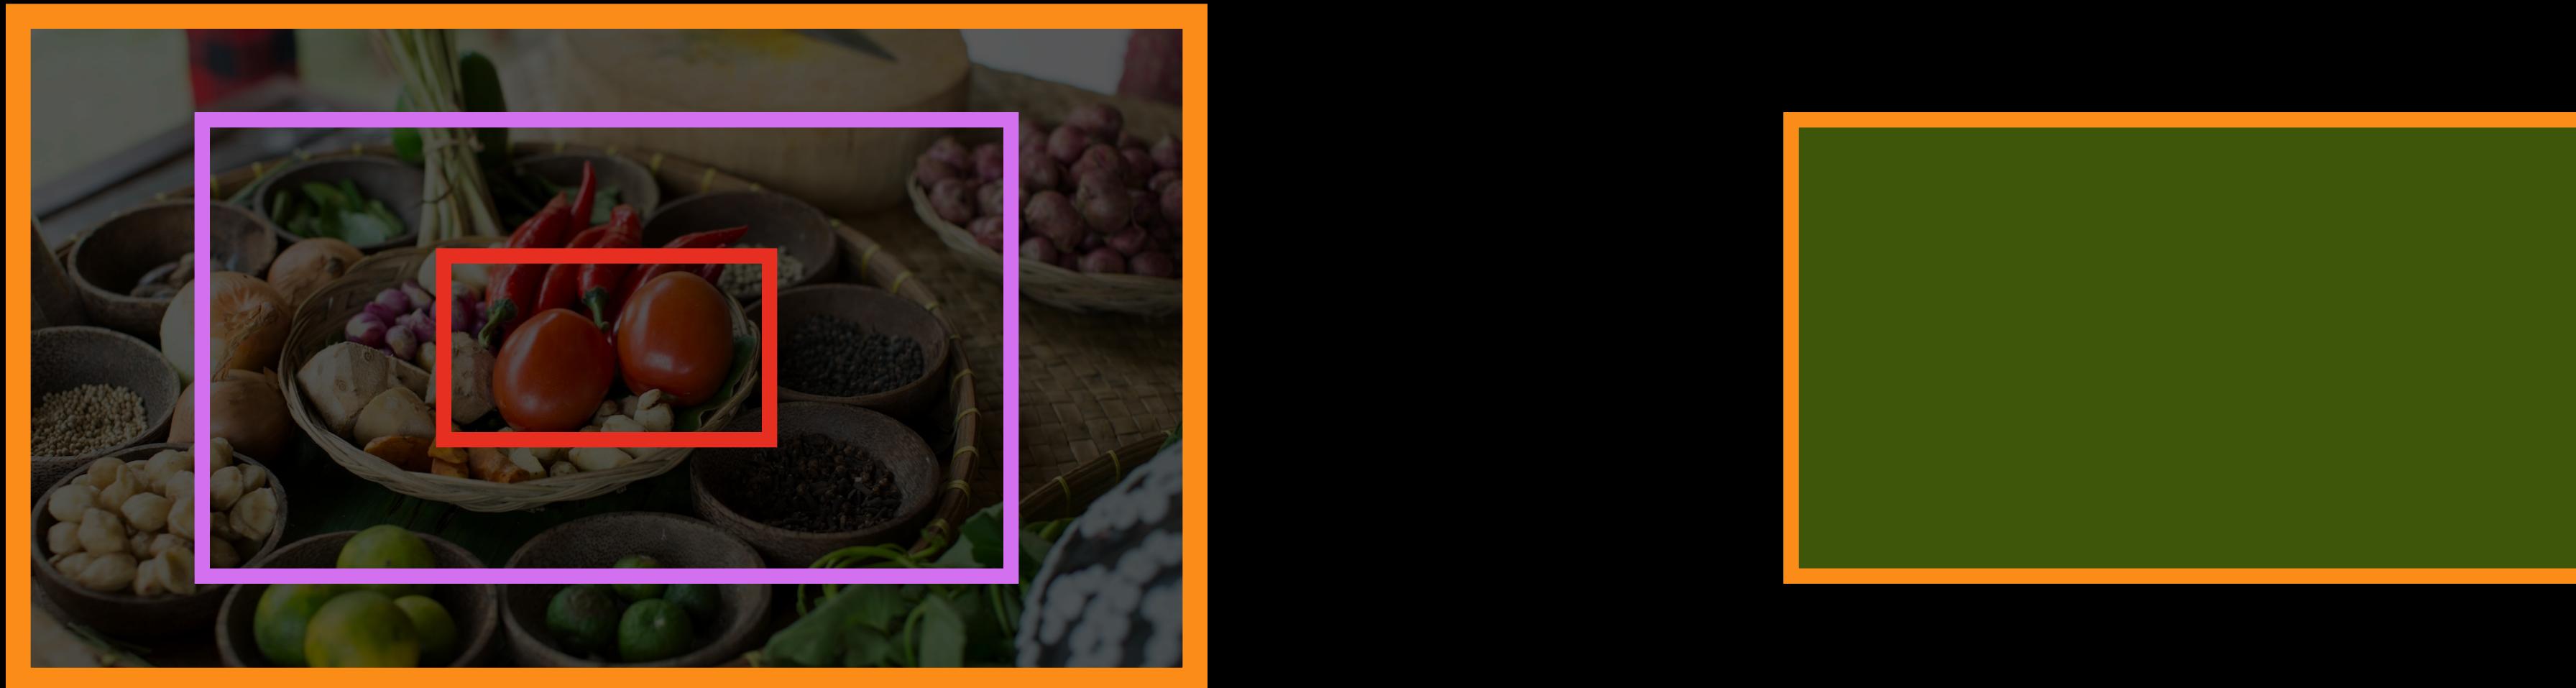

- The point at which upscaling begins is:

```
AVCaptureDeviceFormat videoZoomFactorUpscaleThreshold
```

Zoom API

Zoom API

- AVCaptureDevice property:

```
@property(nonatomic) CGFloat videoZoomFactor;
```

Zoom API

- AVCaptureDevice property:

```
@property(nonatomic) CGFloat videoZoomFactor;
```

- Affects all image outputs: still, video, movie file, metadata, and preview

Zoom API

- `AVCaptureDevice` property:

```
@property(nonatomic) CGFloat videoZoomFactor;
```

- Affects all image outputs: still, video, movie file, metadata, and preview
- Up to limit defined by the `AVCaptureDeviceFormat` property

```
@property(nonatomic, readonly) CGFloat videoMaxZoomFactor;
```

- e.g., `device.activeFormat.videoMaxZoomFactor`

Zoom API

- AVCaptureDevice property:

```
@property(nonatomic) CGFloat videoZoomFactor;
```

- Affects all image outputs: still, video, movie file, metadata, and preview

- Up to limit defined by the AVCaptureDeviceFormat property

```
@property(nonatomic, readonly) CGFloat videoMaxZoomFactor;
```

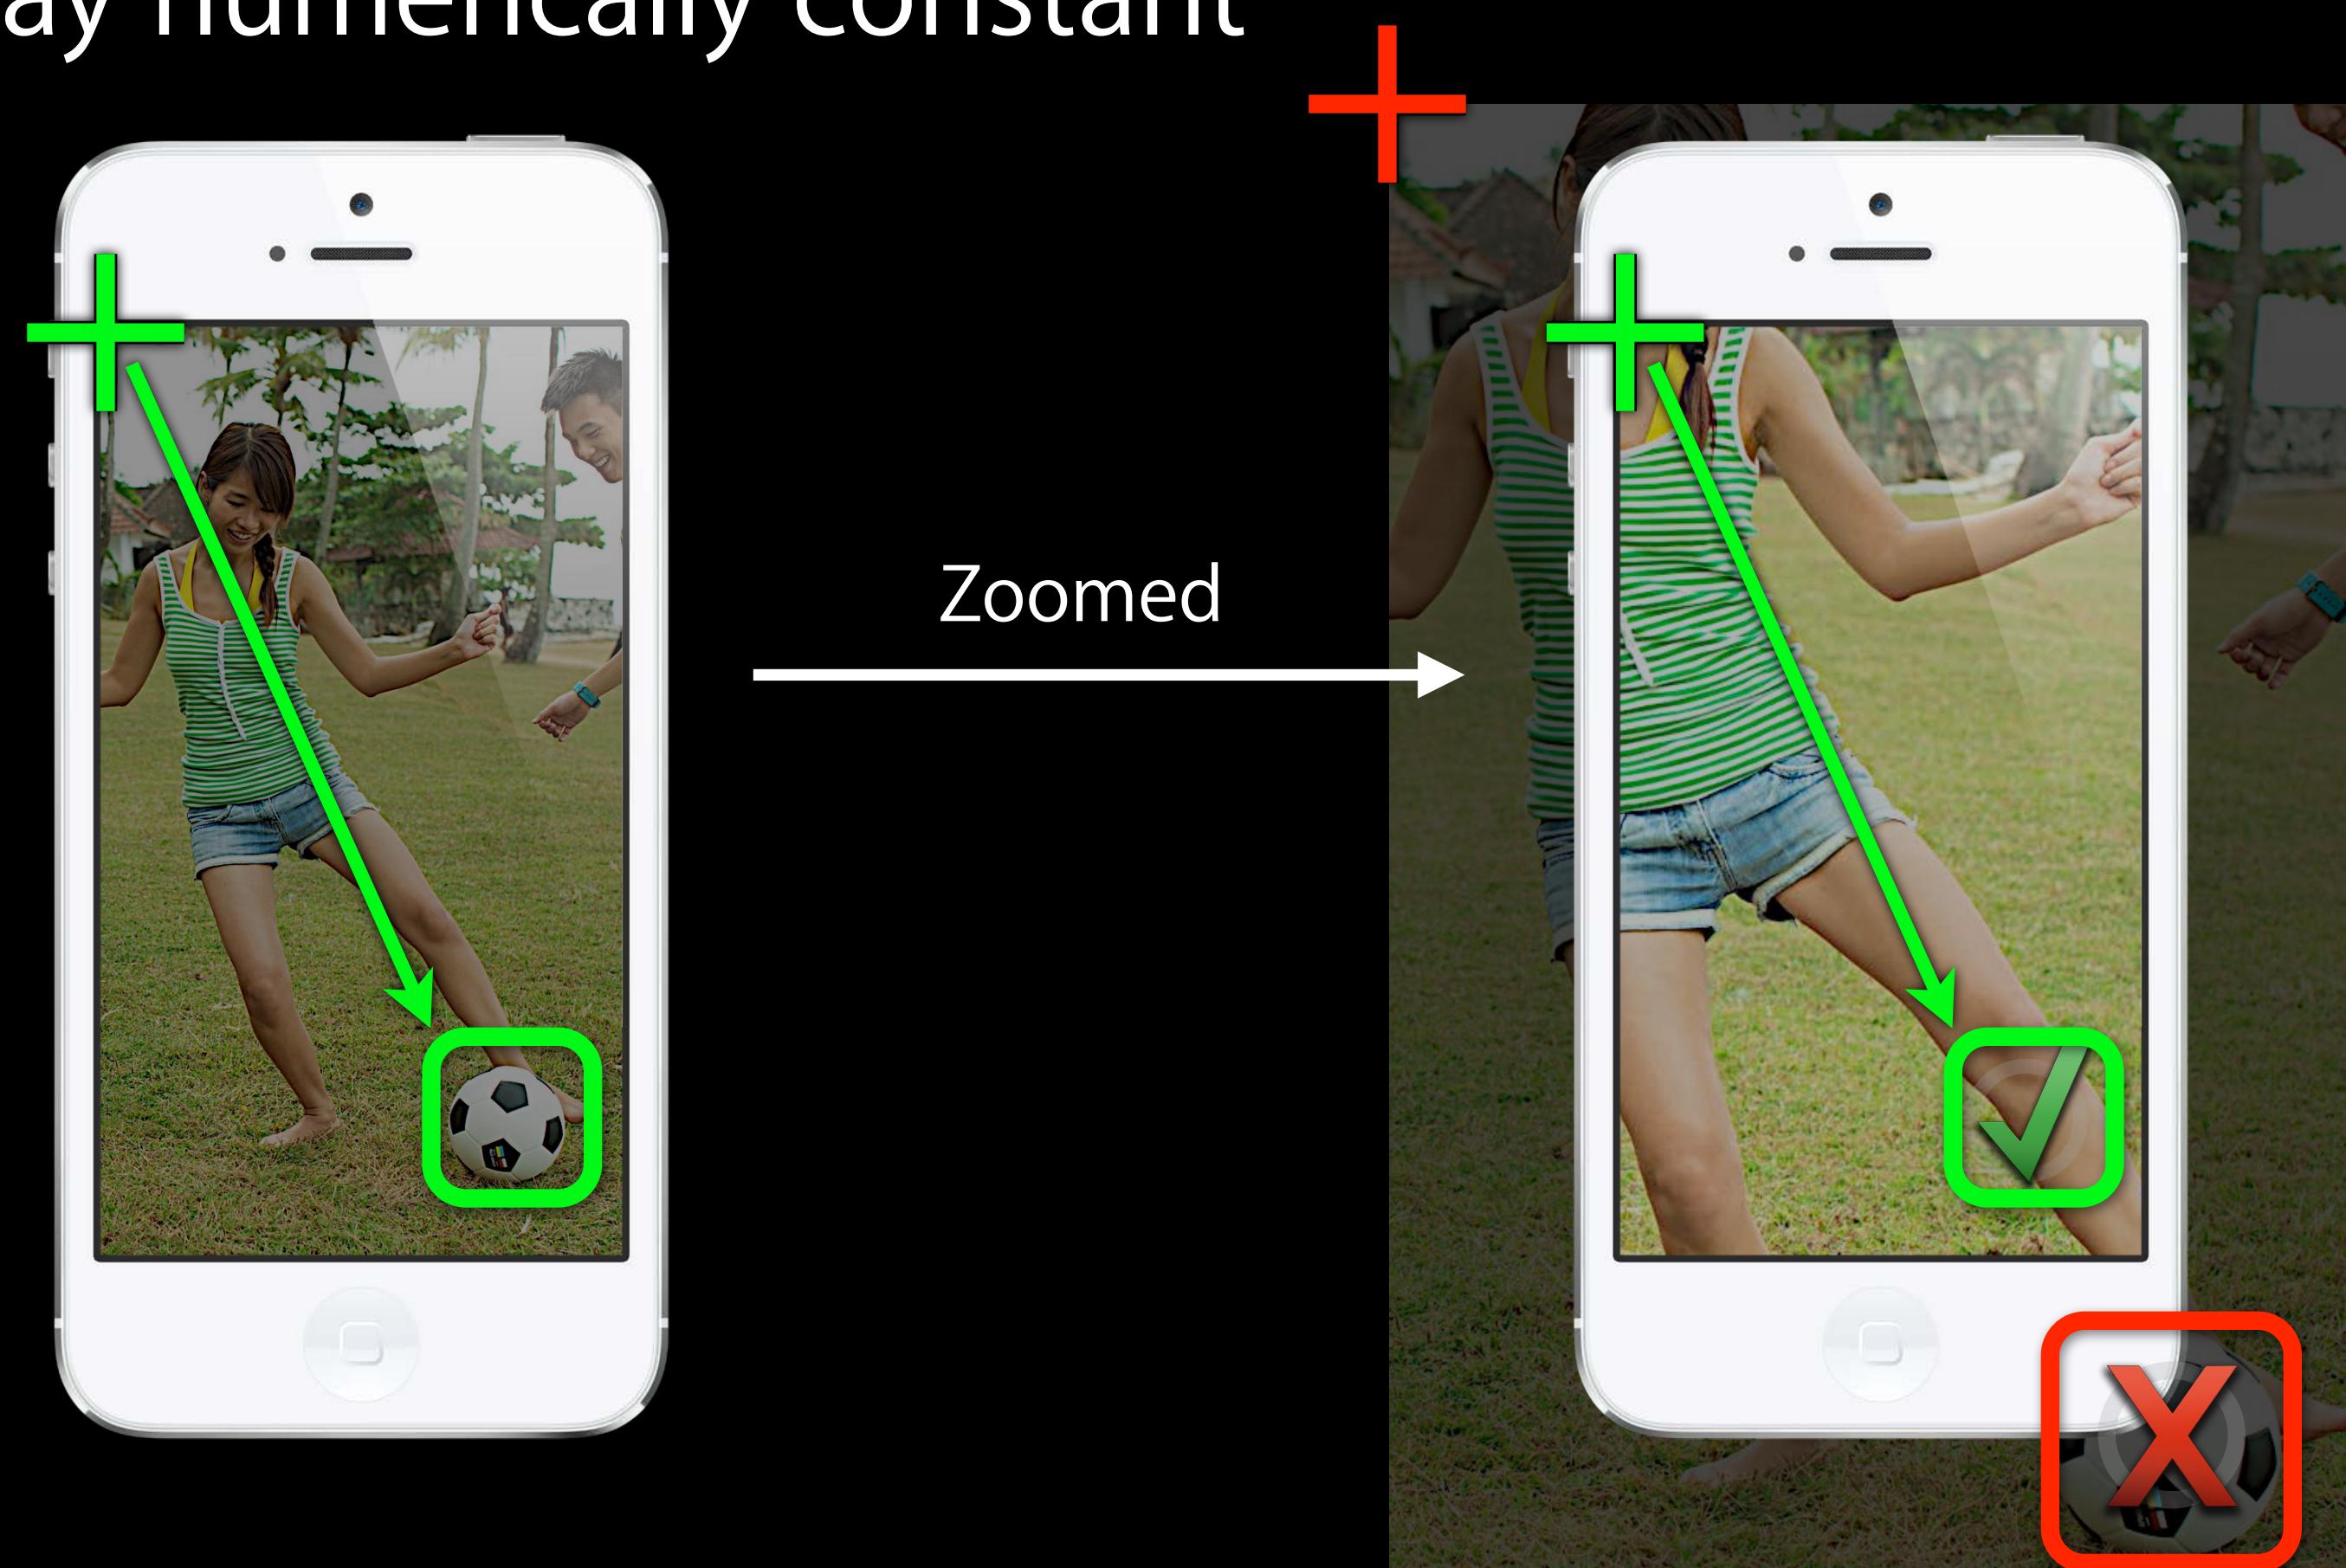

- e.g., device.activeFormat.videoMaxZoomFactor

- Device coordinates (e.g., focus points of interest) stay relative to the visible image frame

Zoom

Coordinates relative to visible frame

- Faces and other metadata overlay relative to current frame
 - `AVCaptureVideoPreviewLayer -transformedMetadataObjectForMetadataObject:`
- Focus points stay numerically constant

Zoom

Video Zoom

- Zoom is a dramatic cinematic effect

Video Zoom

- Zoom is a dramatic cinematic effect
- Ensure smooth zooms by using ramp rather than incrementing factor
 - `(void)rampToVideoZoomFactor:(CGFloat)factor withRate:(float)rate;`

Video Zoom

- Zoom is a dramatic cinematic effect
- Ensure smooth zooms by using ramp rather than incrementing factor
 - `(void)rampToVideoZoomFactor:(CGFloat)factor withRate:(float)rate;`
- AVFoundation will consistently increment zoom factor on each frame

Video Zoom

- Zoom is a dramatic cinematic effect
- Ensure smooth zooms by using ramp rather than incrementing factor
 - `(void)rampToVideoZoomFactor:(CGFloat)factor withRate:(float)rate;`
- AVFoundation will consistently increment zoom factor on each frame
- Call again to change the current ramp, or:
 - `(void)cancelVideoZoomRamp`

Video Zoom

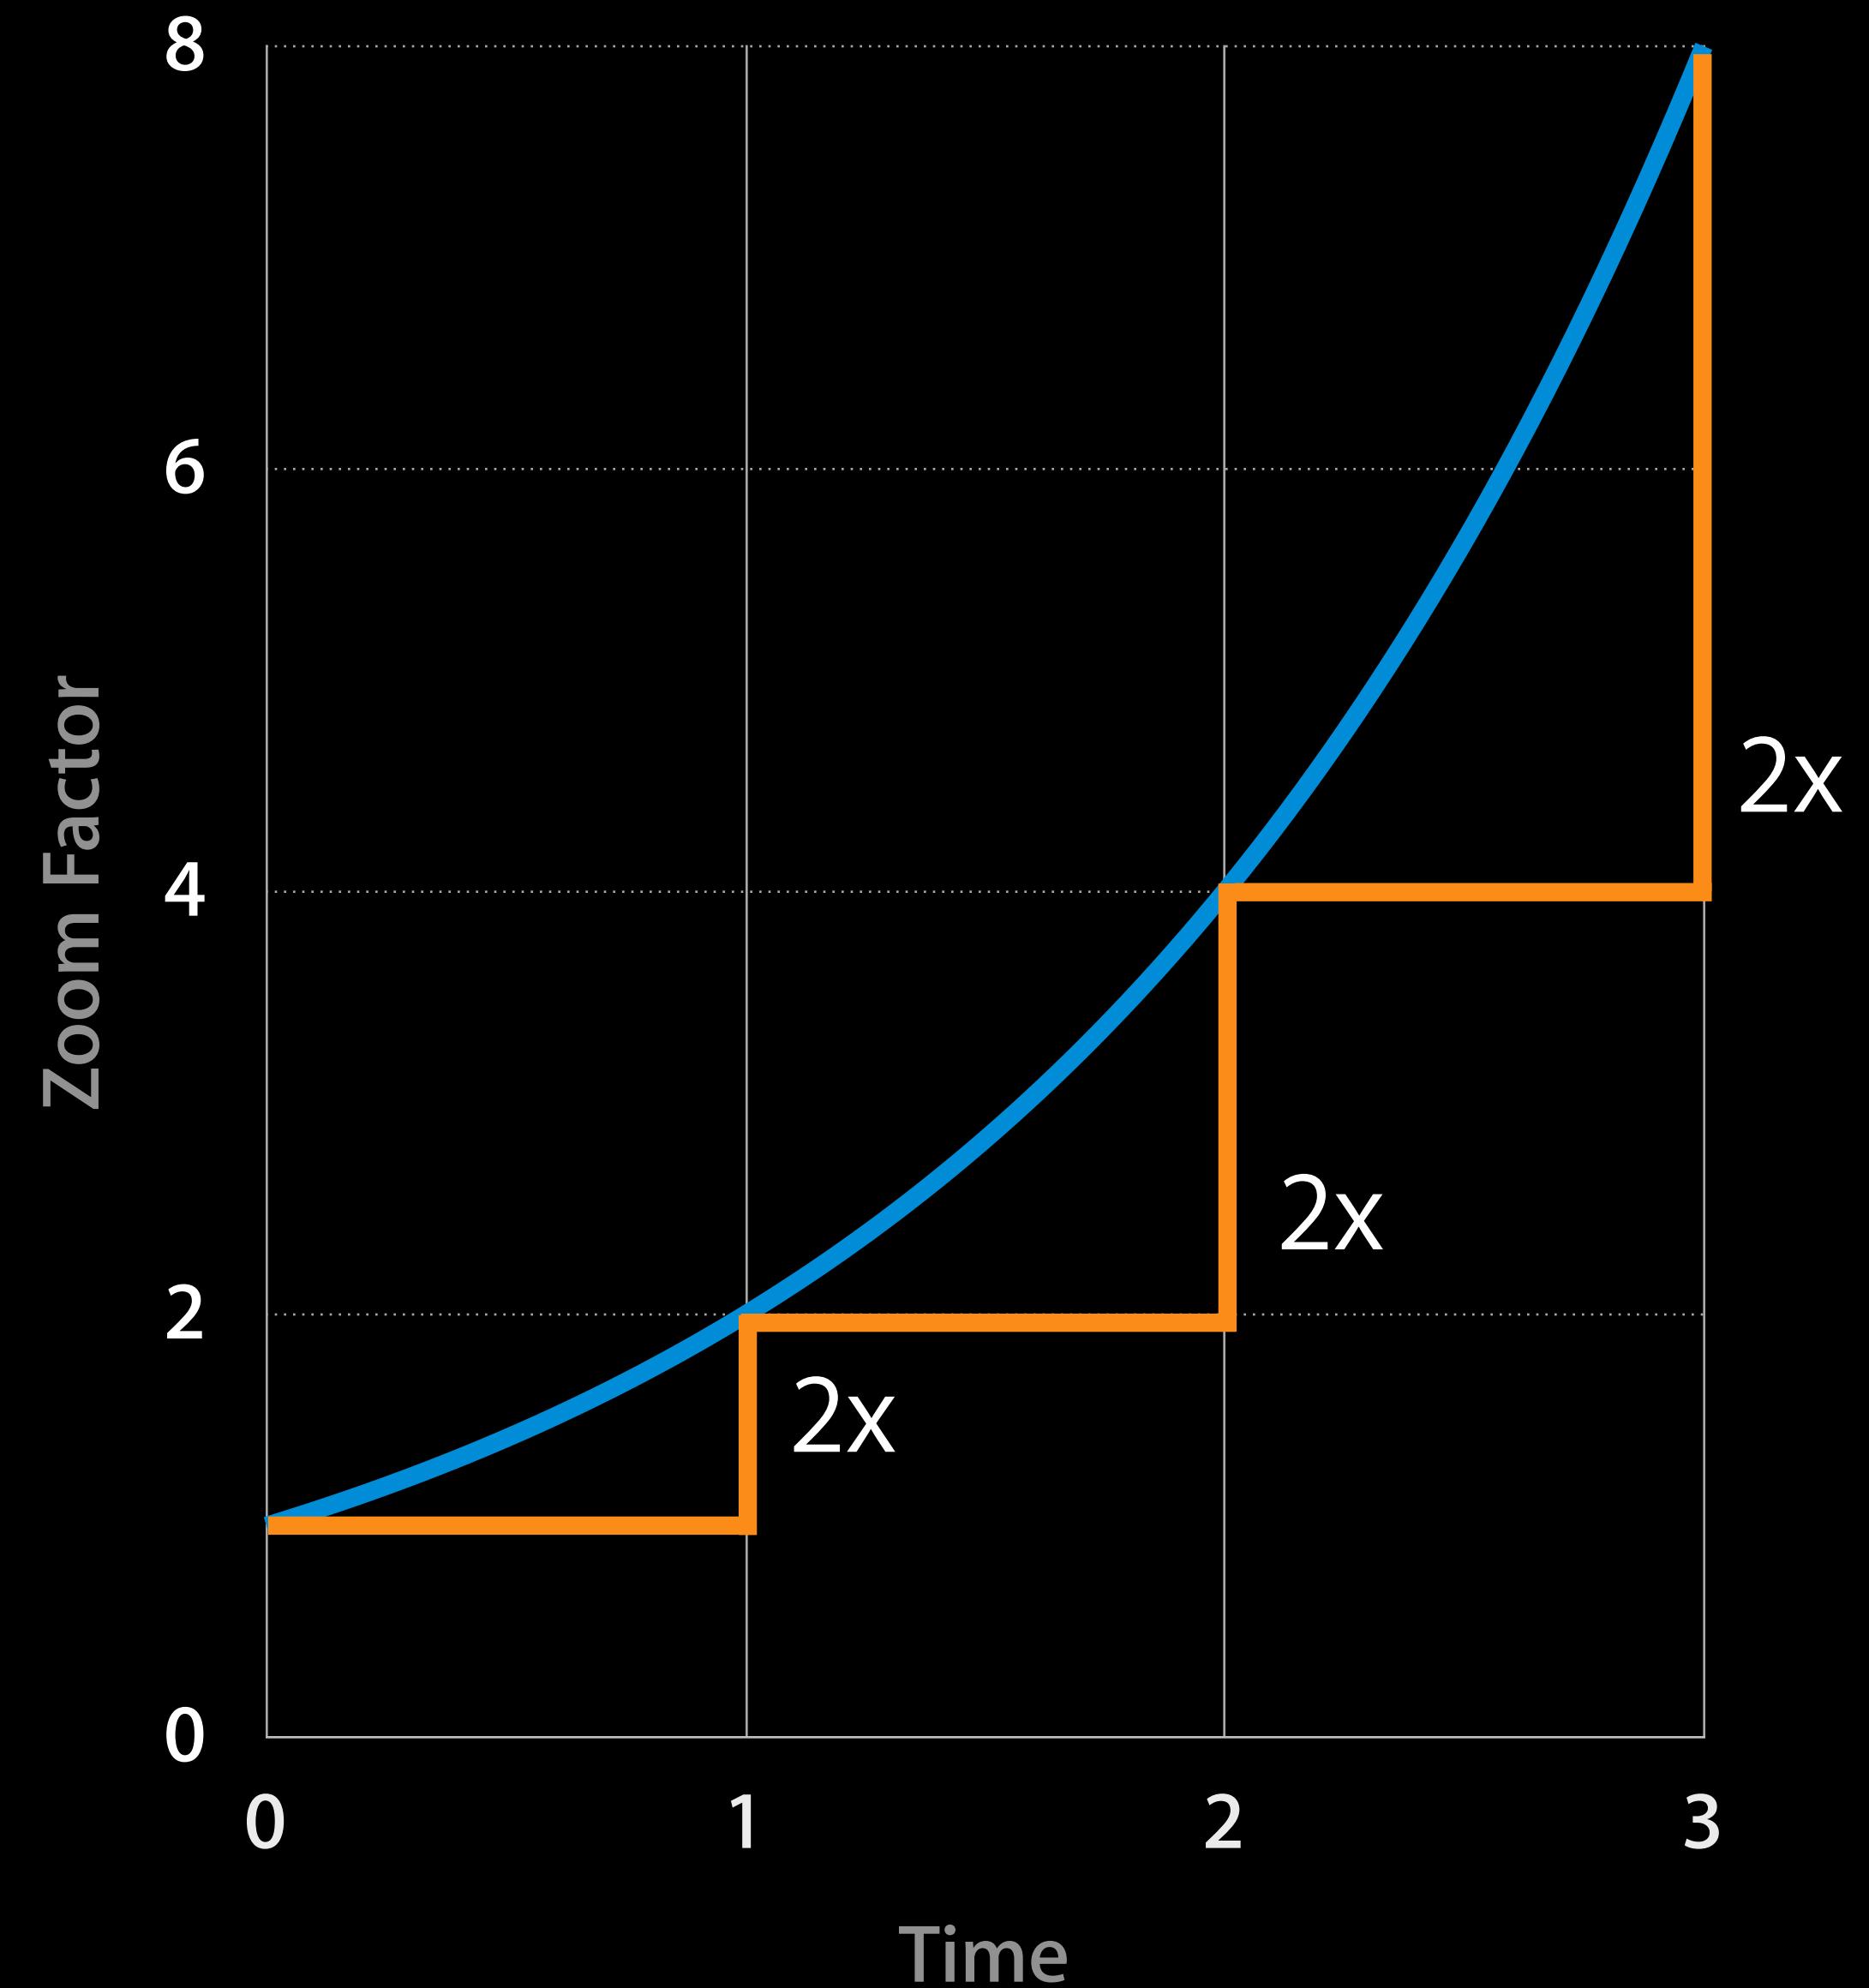

- Zoom is a dramatic cinematic effect
- Ensure smooth zooms by using ramp rather than incrementing factor
 - `(void)rampToVideoZoomFactor:(CGFloat)factor withRate:(float)rate;`
- AVFoundation will consistently increment zoom factor on each frame
- Call again to change the current ramp, or:
 - `(void)cancelVideoZoomRamp`
- Changes in rate are smoothed by an internal acceleration factor

Video Zoom

Setting the rate

- Rate is specified in powers of two per second
 - Moving from 1x to 2x is visually equivalent to moving from 4x to 8x
 - “1” means double or halve the magnification every second (direction is inferred from target factor)
 - Comfortable values are around 1–3

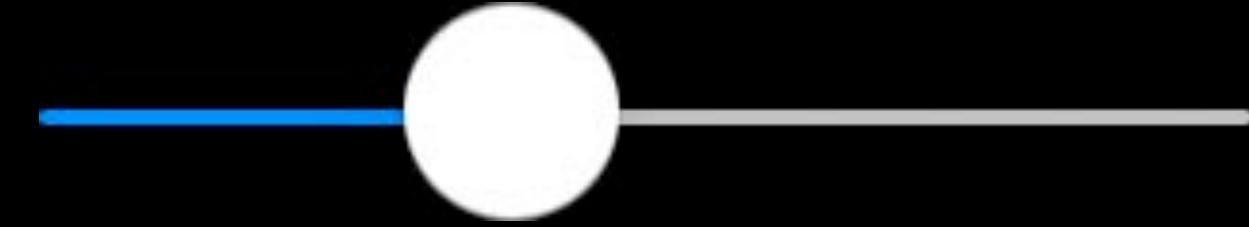

Demo
SoZoomy

Zoom

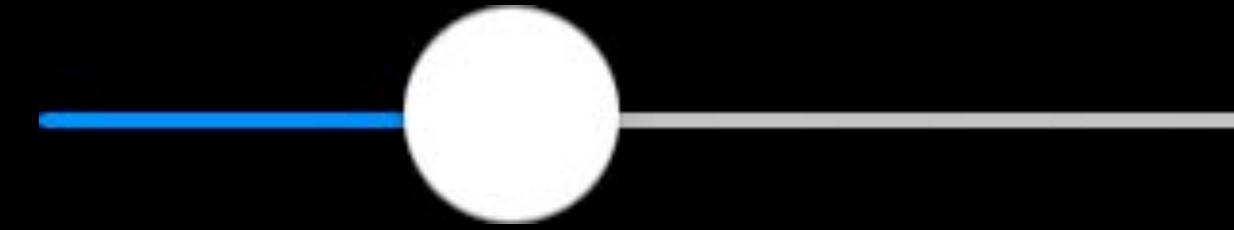

Example: Direct control for zoom

```
[device lockForConfiguration: &err];
// Convert a 0-1 linear slider value to 1-max exponential
device.videoZoomFactor = pow( maxZoom, normalizedTarget );
[device unlockForConfiguration];
```

Zoom

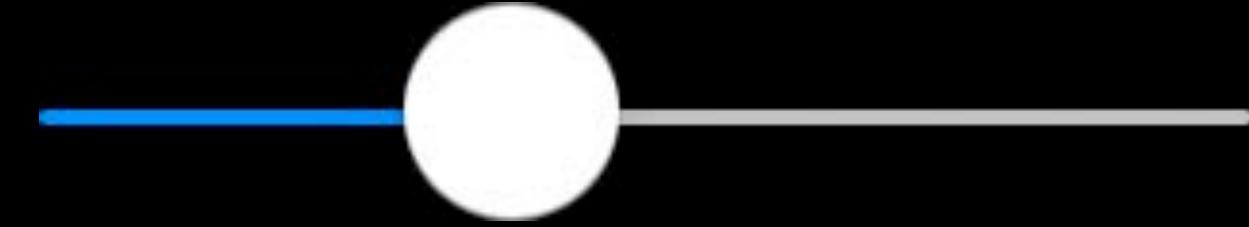

Example: Direct control for zoom

```
[device lockForConfiguration: &err];
// Convert a 0-1 linear slider value to 1-max exponential
device.videoZoomFactor = pow( maxZoom, normalizedTarget );
[device unlockForConfiguration];
```

Zoom

Focus Enhancements

Smooth auto-focus

- [avCaptureDevice setSmoothAutoFocusEnabled:YES];
- Smooth auto-focus slows the focus scan and is less visually intrusive
- Use smooth auto-focus for movie recording

Focus Enhancements

Smooth auto-focus

- [avCaptureDevice setSmoothAutoFocusEnabled:YES];
- Smooth auto-focus slows the focus scan and is less visually intrusive
- Use smooth auto-focus for movie recording
- Use fast focus for still image taking

Focus Enhancements

Smooth auto-focus

- [avCaptureDevice setSmoothAutoFocusEnabled:YES];
- Smooth auto-focus slows the focus scan and is less visually intrusive
- Use smooth auto-focus for movie recording
- Use fast focus for still image taking
- Supported on iPhone 5

Focus Enhancements

Smooth auto-focus

- [avCaptureDevice setSmoothAutoFocusEnabled:YES];
- Smooth auto-focus slows the focus scan and is less visually intrusive
- Use smooth auto-focus for movie recording
- Use fast focus for still image taking
- Supported on iPhone 5
- See **SloPoke** Sample code for reference

Focus Enhancements

```

New in iOS 7

- 60 FPS Support
- Video zoom
- Machine Readable Code detection
- Focus enhancements
- Integration with application AudioSession

What Is an AVAudioSession?

What Is an AVAudioSession?

- Every application has a singleton AVAudioSession

What Is an AVAudioSession?

- Every application has a singleton AVAudioSession
- AVAudioSession interfaces let you configure:
 - Audio category
 - Category options
 - Mode
 - Preferred sample rate
 - Preferred IOBufferDuration
 - Input gain

What Is an AVAudioSession?

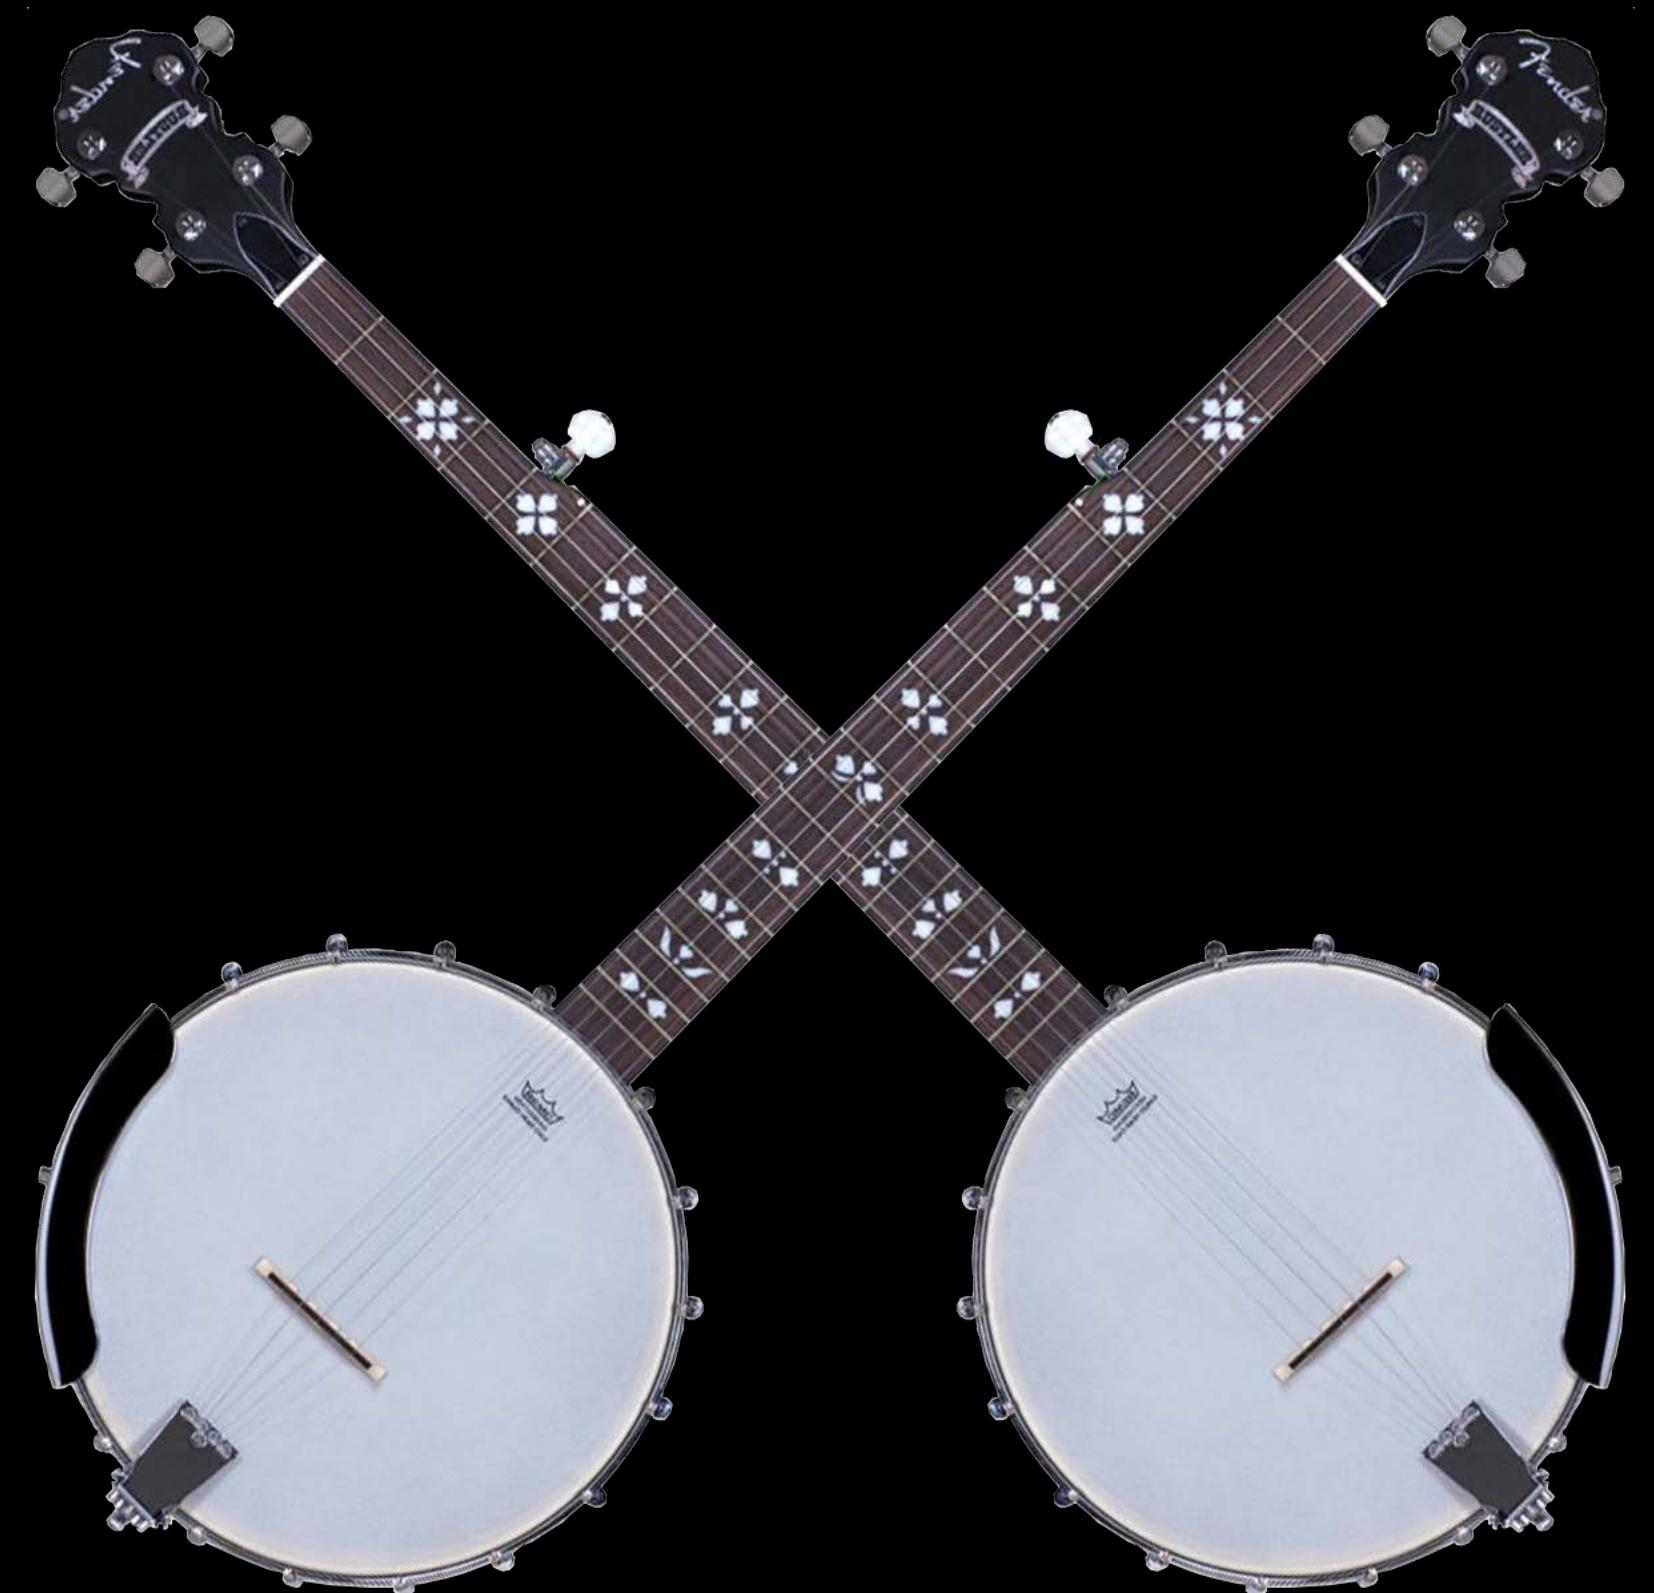

What Is an AVAudioSession?

- (NEW in iOS 7) AVAudioSession Microphone selection
 - Physical location (upper or lower)
 - Physical orientation (front, back, top, bottom)
 - Polar pattern (omnidirectional, cardioid, etc.)

Dueling Audio Sessions

AVCapture App AudioSession Adoption

AVCapture App AudioSession Adoption

- AVCaptureSession uses your app audio session by default
 - [session usesApplicationAudioSession] == YES
 - Apps linked before iOS 7 get the old behavior

AVCapture App AudioSession Adoption

- AVCaptureSession uses your app audio session by default
 - [session usesApplicationAudioSession] == YES
 - Apps linked before iOS 7 get the old behavior
- AVCaptureSession still configures the audio session by default
 - [session automaticallyConfiguresApplicationAudioSession] == YES
 - After capture is finished, AVCaptureSession does not restore any AVAudioSession state

AVCapture App AudioSession Adoption

- AVCaptureSession uses your app audio session by default
 - [session usesApplicationAudioSession] == YES
 - Apps linked before iOS 7 get the old behavior
- AVCaptureSession still configures the audio session by default
 - [session automaticallyConfiguresApplicationAudioSession] == YES
 - After capture is finished, AVCaptureSession does not restore any AVAudioSession state

Be careful, recording may fail

Audio AVCaptureDevice Formats

Audio AVCaptureDevice Formats

- Audio AVCaptureDevices expose no formats array

Audio AVCaptureDevice Formats

- Audio AVCaptureDevices expose no formats array
- Use AVAudioSession to configure audio input

AVCapture App AudioSession Best Practices

- DO let AVCaptureSession share your app audio session
- DO let AVCaptureSession auto-configure your app audio session
 - Exceptions
 - Custom microphone selection
 - Custom category
 - Custom sample rate, etc.

What's New in Camera Capture

- Greater transparency for users
- New AV Foundation capture features in iOS 7
- Sample code update

Sample Code Update

- **VideoSnake** (WWDC 2013 edition)
 - Updated to iOS 7 APIs
 - Illustrates best practices
 - Integrates with OpenGL
 - Illustrates synchronized a/v movie writing with AssetWriter
 - Download it today!

Sample Code Update

Sample Code Update

Apple Sample Code Is Your Friend

Summary

- iOS user consent for microphone and camera use
- Powerful new AV Foundation capture features
 - 60 FPS capture, playback, editing, and export
 - Full-resolution video data output support
 - Video zoom
 - Machine Readable Code detection
 - Focus enhancements
 - App audio session integration
- Best practices sample code update

Sample Code for This Session

- SloPoke for iOS
- SoZoomy for iOS
- QRchestra for iOS
- VideoSnake for iOS (updated!)
