This protects both users and merchants

Merchant Validation

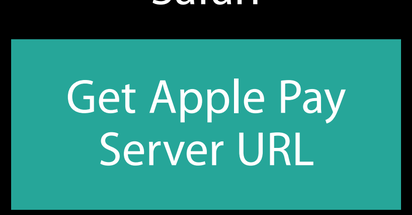
Why do we use it?

In an iOS app Apple Pay security is protected with signed entitlements

This protects both users and merchants

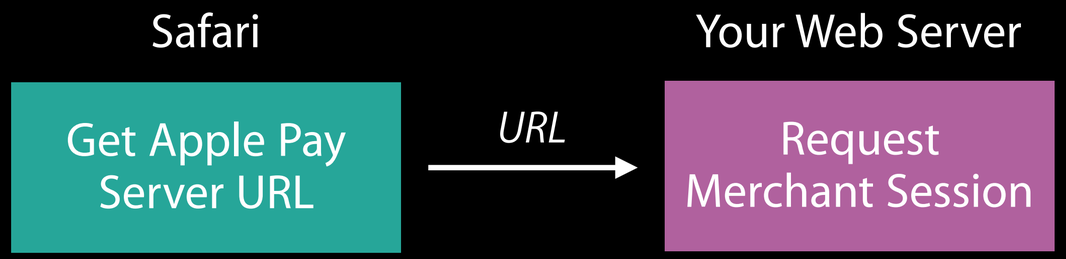
Merchant validation performs a similar function on the web

Performing Merchant Validation



Obtain the Apple Pay session generation URL from Safari

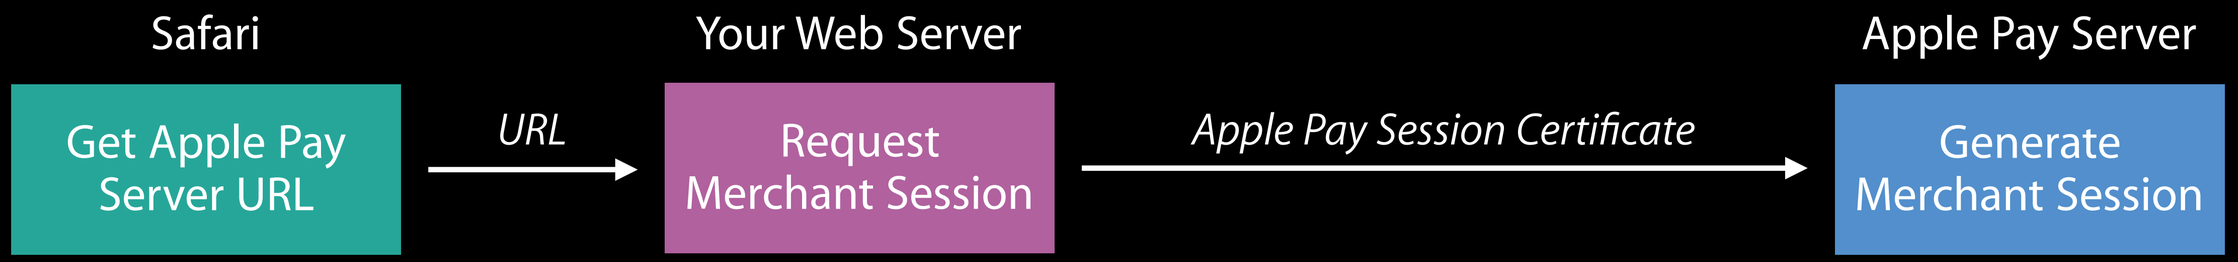
Performing Merchant Validation



Obtain the Apple Pay session generation URL from Safari

Send this URL to your web server to start merchant validation

Performing Merchant Validation



Obtain the Apple Pay session generation URL from Safari

Send this URL to your web server to start merchant validation

Once generated, return it back to the client to be consumed

Merchant Validation

The merchant session

Merchant Validation

The merchant session

A unique token that's linked with a single Apple Pay request from a site

Merchant Validation

The merchant session

A unique token that's linked with a single Apple Pay request from a site

Used to ensure your site is still secure and available for Apple Pay

Merchant Validation

The merchant session

A unique token that's linked with a single Apple Pay request from a site

Used to ensure your site is still secure and available for Apple Pay

Required for every Apple Pay on the web payment

Merchant Validation

The merchant session

A unique token that's linked with a single Apple Pay request from a site

Used to ensure your site is still secure and available for Apple Pay

Required for every Apple Pay on the web payment

Your server requests the session from Apple's servers

Merchant Validation

Tips

Merchant Validation

Tips

Always obtain the session request URL from the client, as it may vary

Merchant Validation

Tips

Always obtain the session request URL from the client, as it may vary

Only request a session when the user interacts with the Apple Pay button

Merchant Validation

Tips

Always obtain the session request URL from the client, as it may vary

Only request a session when the user interacts with the Apple Pay button

Do not generate a merchant session client-side!

Presenting the Payment Sheet

Create a new `ApplePaySession` JavaScript object

Pass in an API version number

Pass in a payment request

Call begin()

```
// Presenting the payment sheet

var paymentRequest = {
   currencyCode: 'USD',
   countryCode: 'US',
   total: {
      label: ‘Canine Clothing',
      amount: '19.99'
   },
   supportedNetworks: ['amex', 'discover', 'masterCard', 'visa' ],
   merchantCapabilities: [ 'supports3DS' ],
   requiredShippingAddressFields: [ 'postalAddress' ]
};

var session = new ApplePaySession(1, paymentRequest);
session.begin();
```

```
// Presenting the payment sheet

var paymentRequest = {
    currencyCode: 'USD',
    countryCode: 'US',
    total: {
        label: ‘Canine Clothing',
        amount: '19.99'
    },
    supportedNetworks: ['amex', 'discover', 'masterCard', 'visa' ],
    merchantCapabilities: [ 'supports3DS' ],
    requiredShippingAddressFields: [ 'postalAddress' ]
};

var session = new ApplePaySession(1, paymentRequest);
session.begin();
```

```
// Presenting the payment sheet

var paymentRequest = {
   currencyCode: 'USD',
   countryCode: 'US',
   total: {
      label: ‘Canine Clothing',
      amount: '19.99'
   },
   supportedNetworks: ['amex', 'discover', 'masterCard', 'visa' ],
   merchantCapabilities: [ 'supports3DS' ],
   requiredShippingAddressFields: [ 'postalAddress' ]
};

var session = new ApplePaySession(1, paymentRequest);
session.begin();
```

```
// Presenting the payment sheet

var paymentRequest = {
   currencyCode: 'USD',
   countryCode: 'US',
   total: {
      label: ‘Canine Clothing',
      amount: '19.99'
   },
   supportedNetworks: ['amex', 'discover', 'masterCard', 'visa' ],
   merchantCapabilities: [ 'supports3DS' ],
   requiredShippingAddressFields: [ 'postalAddress' ]
};

var session = new ApplePaySession(1, paymentRequest);
session.begin();
```

```
// Presenting the payment sheet

var paymentRequest = {
   currencyCode: 'USD',
   countryCode: 'US',
   total: {
      label: ‘Canine Clothing',
      amount: '19.99'
   },
   supportedNetworks: ['amex', 'discover', 'masterCard', 'visa' ],
   merchantCapabilities: [ 'supports3DS' ],
   requiredShippingAddressFields: [ 'postalAddress' ]
};

var session = new ApplePaySession(1, paymentRequest);
session.begin();
```

```
// Presenting the payment sheet

var paymentRequest = {
   currencyCode: 'USD',
   countryCode: 'US',
   total: {
      label: ‘Canine Clothing',
      amount: '19.99'
   },
   supportedNetworks: ['amex', 'discover', 'masterCard', 'visa' ],
   merchantCapabilities: [ 'supports3DS' ],
   requiredShippingAddressFields: [ 'postalAddress' ]
};

var session = new ApplePaySession(1, paymentRequest);
session.begin();
```

Presenting the Payment Sheet

Creating an ApplePaySession can throw an exception

Called from an insecure page

Called with an invalid payment request

- Missing properties
- Invalid properties
- Unknown properties

Presenting the Payment Sheet

Calling begin() can throw an exception

If not called in response to a user action

If there is already an active sheet
