Resource Management

Resource Management

Managed Resources

Resource Manager

Resource Management Commands

Examples

Managed Resources

Managed Resources

Two resources are coordinated

mainScreen

Access to center display in car

mainAudio

Access to speakers and microphone in car

Managed Resources

Use for limited or undetermined periods of time

take

Use for undetermined period of time
Resource owner changes permanently

borrow

Use for limited period of time
Resource owner transferred temporarily until action completes
When action completes, resource returns to previous owner

Main Screen

Native user interface takes the display

Main Screen

Native user interface takes the display

Native UI takes the display when the user

- Presses a hard key linked to the native UI
- Presses the OEM icon in CarPlay
- Activates a feature using the native voice recognizer

Main Screen

Native user interface takes the display

Main Screen

Native user interface takes the display

Main Screen

CarPlay takes the display

Main Screen

CarPlay takes the display

CarPlay takes the display when the user

- Presses a hard key linked to CarPlay
- Selects the CarPlay button in the native UI
- Uses Siri to launch an application
 - For example "Open Maps"

Main Screen

Borrowing the display

Borrow the display for applications with limited duration

Main Screen

Borrowing the display

Borrow the display for applications with limited duration

- Phone calls
- Siri or native voice recognition
- Notifications
- Alerts

Main Screen

Native user interface owns the display

Main Screen

Native user interface owns the display

Main Screen

Native user interface owns the display

Main Screen

Display is returned to the native user interface

Main Audio

Distributes hardware resources based on audio type

Main Audio

Distributes hardware resources based on audio type

Audio type

Hardware resource

Application

Main Audio

Distributes hardware resources based on audio type

Audio type

Hardware resource

Application

media

Speakers

Media playback

Main Audio

Distributes hardware resources based on audio type

Audio type	Hardware resource	Application
media	Speakers	Media playback
alert	Speakers	Ringtones and alerts

Main Audio

Distributes hardware resources based on audio type

Audio type	Hardware resource	Application
<code>media</code>	Speakers	Media playback
<code>alert</code>	Speakers	Ringtones and alerts
<code>speechRecognition</code>	Speakers and microphone	Siri

Main Audio

Distributes hardware resources based on audio type

Audio type	Hardware resource	Application
media	Speakers	Media playback
alert	Speakers	Ringtones and alerts
speechRecognition	Speakers and microphone	Siri
telephony	Speakers and microphone	Phone calls

Main Audio

Distributes hardware resources based on audio type

Audio type	Hardware resource	Application
<code>media</code>	Speakers	Media playback
<code>alert</code>	Speakers	Ringtones and alerts
<code>speechRecognition</code>	Speakers and microphone	Siri
<code>telephony</code>	Speakers and microphone	Phone calls
<code>default</code>	Speakers and microphone	Undefined

Alternate Audio

Not a managed resource

Audio played over `alternateAudio`

- Maps turn-by-turn announcements
- New message alerts

Always mixed with content playing through the in-car speakers over `mainAudio`

Resource Manager

Tom Powell CarPlay Engineering

Resource Manager

Two systems need to manage access to screen and audio

Resource Manager

Arbitrates the access to the resources

Resource
Manager

Resource Manager

Responsibilities

Holds current state

Follows strict set of rules

Assigns resources

Resource Manager

Handling requests for resources

Resource
Manager

Resource Manager

Handling requests for resources

Resource Manager

Handling requests for resources

Resource
Manager

Check state
Assign resource
Set new state

Resource Manager

Handling requests for resources

Resource
Manager

Resource Manager

Handling requests for resources

State changes should only be triggered by the resource manager

Notify new screen owner

Resource Manager

Implement in native or CarPlay sub-system?

Resource
Manager

Resource Manager

Implement in native or CarPlay sub-system?

Resource Manager

iPhone is referred to as the “controller”

Head unit is referred to as the “accessory”

Same rules apply to both native and CarPlay applications

Resource Management Commands

Commands for Managing Resources

changeModes

Request or release resources

modesChanged

Notification that state changed

Request or Release Resources

Sent from head unit to controller

Request or Release Resources

Sent from head unit to controller

Request or Release Resources

changeModes

States what the accessory intends to do with the resources

Declares why the head unit needs the resources

If the resource is transferred, it defines who can get access to it from the new owner

Notification that Resource Owner Changed

Sent from controller to head unit

Notification that Resource Owner Changed

Sent from controller to head unit

modesChanged

Notification that Resource Owner Changed

modesChanged

States the current owner of the managed resources

Sent when there is a state change

Examples

Examples

Play FM radio

Use native voice recognition

Show backup camera

Ask Siri to play music

```

Show Backup Camera

🔊 iPhone audio playing

Show Backup Camera

CarPlay does not appear if head unit constrains access

Show Backup Camera

CarPlay does not appear if head unit constrains access

 Ringtone playing

Defining the Constraints

Define the rules while you are the owner

anytime

Allow any application to get access

user-initiated

Allow only user-initiated applications to get access

never

Do not let any application get access

Define the Constraints

Define the rules while you are the owner

When taking resources, make sure to define both take constraints and borrow constraints

When borrowing resources, only define borrow constraints

In most cases use **anytime**, unless the native user interface needs immediate attention

Examples

Play FM radio

Use native voice recognition

Show backup camera

Ask Siri to play music

Summary

CarPlay relies on the same resources as your native system and is designed to coexist with your native user interface

For a great CarPlay experience, consider resource handling for each use case and follow CarPlay design recommendations

CarPlay specifications available through the MFi Program
