Right-to-Left Languages

Arabic and Hebrew new in tvOS 11

400 million speakers worldwide

Built in support in TVMLKit

Right-to-Left Languages

Adding support

Add Arabic or Hebrew in your Project Settings

Right-to-Left Languages

Layout

Text alignment

Images

Right-to-Left Languages

Layout

NEW

New context aware values for `tv-align` and `tv-position`

`leading`, `trailing` resolve to `right` and `left` at runtime

Right-to-Left Languages

Layout

NEW

New context aware values for `tv-align` and `tv-position`

`leading`, `trailing` resolve to `right` and `left` at runtime

```
.collectionListLockupImage {
    tv-position: right;
}
.sectionHeaderTitle {
    tv-align: left;
}
```

Right-to-Left Languages

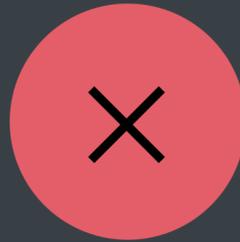

Layout

NEW

New context aware values for `tv-align` and `tv-position`

`leading`, `trailing` resolve to `right` and `left` at runtime

```
.collectionListLockupImage {  
    tv-position: right;  
}  
  
.sectionHeaderTitle {  
    tv-align: left;  
}
```

Right-to-Left Languages

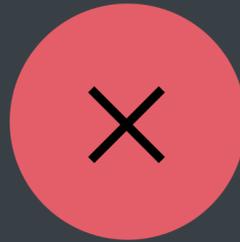

Layout

NEW

New context aware values for `tv-align` and `tv-position`

`leading`, `trailing` resolve to `right` and `left` at runtime

```
.collectionListLockupImage {  
    tv-position: right;  
}  
  
.sectionHeaderTitle {  
    tv-align: left;  
}
```

```
.collectionListLockupImage {  
    tv-position: trailing;  
}  
  
.sectionHeaderTitle {  
    tv-align: leading;  
}
```

Right-to-Left Languages

Layout

NEW

Adjust value inside media query for Layout Direction

- Margin
- Padding

Right-to-Left Languages

Layout

NEW

Adjust value inside media query for Layout Direction

- Margin
- Padding

```
@media (layout-direction: ltr) {  
  .my_interesting_image { margin: 0 12 0 0; }  
}  
  
@media (layout-direction: rtl) {  
  .my_interesting_image { margin: 0 0 0 12; }  
}
```

Right-to-Left Languages

Layout

NEW

Adjust value inside media query for Layout Direction

- Margin
- Padding

```
@media (layout-direction: ltr) {  
    .my_interesting_image { margin: 0 12 0 0; }  
}  
  
@media (layout-direction: rtl) {  
    .my_interesting_image { margin: 0 0 0 12; }  
}
```

Right-to-Left Languages

Layout

NEW

Adjust value inside media query for Layout Direction

- Margin
- Padding

```
@media (layout-direction: ltr) {  
  .my_interesting_image { margin: 0 12 0 0; }  
}  
  
@media (layout-direction: rtl) {  
  .my_interesting_image { margin: 0 0 0 12; }  
}
```

Right-to-Left Languages

Resource images

For Resource images use asset catalogs

Specify dedicated images or mirror for RTL

Right-to-Left Languages

Remote images

NEW

For server-side images, use layout direction media queries to load direction-specific assets

```
<img srcset="url1 (layout-direction:ltr), url2 (layout-direction:rtl)" ... />
```

Right-to-Left Languages

Remote images

NEW

For server-side images, use layout direction media queries to load direction-specific assets

```
<img srcset="url1 (layout-direction:ltr), url2 (layout-direction:rtl)" ... />
```

Right-to-Left Languages

Remote images

NEW

For server-side images, use layout direction media queries to load direction-specific assets

```
<img srcset="url1 (layout-direction:ltr), url2 (layout-direction:rtl)" ... />
```

Demo

Recap

Leading and trailing values for layout

Media queries for margin and padding

Natural text alignment

Alternate image assets as necessary

Test with RTL pseudolocalization language

Right-to-Left Languages

Handling custom views

Auto Layout with leading/trailing constraints

`effectiveLayoutDirection` when managing frames

Internationalization Best Practices

  </section>
</grid>
```

Template Optimizations

Prototype

Defines layout

Facilitates partial DOM authoring

Template Optimizations

JavaScript

```
      Data
{
  "objects" : [
    {
      "url" : "url1",
      "title" : "Title 1"
    },
    {
      "url" : "url2",
      "title" : "Title 2"
    },
    .
    .
    .
    .
  ]
}
```

XML

```
      Template
<grid>
  <section>
    <prototypes>
      <lockup>
        <img width="308" height="308"/>
        <title></title>
      </lockup>
    </prototypes>
  </section>
</grid>
```

Template Optimizations

JavaScript

```
      Data
{
  "objects" : [
    {
      "url" : "url1",
      "title" : "Title 1"
    },
    {
      "url" : "url2",
      "title" : "Title 2"
    },
    .
    .
    .
    .
  ]
}
```

XML

Template

```
<grid>
  <section binding="items : {objects};">
    <prototypes>
      <lookup>
        <img binding="@src : {url};" width="308"
            height="308"/>
        <title binding="textContent : {title};"></title>
      </lookup>
    </prototypes>
  </section>

```

Template Optimizations

JavaScript

```
      Data
{
  "objects" : [
    {
      "url" : "url1",
      "title" : "Title 1"
    },
    {
      "url" : "url2",
      "title" : "Title 2"
    },
    .
    .
    .
    .
  ]
}
```

XML

Template

```
<grid>
  <section binding="items : {objects};">
    <prototypes>
      <lookup>
        <img binding="@src : {url};" width="308"
          height="308"/>
        <title binding="textContent : {title};"></title>
      </lookup>
    </prototypes>
  </section>
</grid>
```

Template Optimizations

Data binding

Associates data to element

Declared through `binding` attribute

- `@<attr>`
- `textContent`
- `items`

Template Optimizations

Data binding

Provide data using dataItem property

```
// Parse JSON text.  
let data = parseFromJSON(json);  
  
// Attach data to section element.  
let section = document.createElement("section");  
section.dataItem = data;
```

Template Optimizations

Data binding

Provide data using dataItem property

```
// Parse JSON text.  
let data = parseFromJSON(json);  
  
// Attach data to section element.  
let section = document.createElement("section");  
section.dataItem = data;
```

Template Optimizations

Data binding

Provide data using dataItem property

```
// Parse JSON text.  
let data = parseFromJSON(json);  
  
// Attach data to section element.  
let section = document.createElement("section");  
section.dataItem = data;
```

Template Optimizations

Data binding

Provide data using dataItem property

```
// Parse JSON text.  
let data = parseFromJSON(json);  
  
// Attach data to section element.  
let section = document.createElement("section");  
section.dataItem = data;
```

Template Optimizations

Data binding

Provide data using dataItem property

```
// Parse JSON text.  
let data = parseFromJSON(json);  
  
// Attach data to section element.  
let section = document.createElement("section");  
section.dataItem = data;
```

Template Optimizations

Pagination

Append using `needsmore`

- `shelf`, `grid`, `list`, `stackTemplate`
- Invoked towards the end

Template Optimizations

Pagination

Append using `needsmore`

- `shelf`, `grid`, `list`, `stackTemplate`
- Invoked towards the end

Requires observable objects

```
// Map item objects into DataItem objects
let dataItems = objects.map((object) => {
    let dataItem = new DataItem("MyObject", object.id);
    dataItem.url = object.url;
    dataItem.title = object.title;
    return dataItem;
});
```

```
// Create a data item for the grid.
let sectionDataItem = new DataItem();
sectionDataItem.objects = dataItems;
```

```
// Provide data through DOM
let sectionElement = document.createElement("section");
sectionElement.dataItem = sectionDataItem;
```

```
// Map item objects into DataItem objects
let dataItems = objects.map((object) => {
    let dataItem = new DataItem("MyObject", object.id);
    dataItem.url = object.url;
    dataItem.title = object.title;
    return dataItem;
});
```

```
// Create a data item for the grid.
let sectionDataItem = new DataItem();
sectionDataItem.objects = dataItems;
```

```
// Provide data through DOM
let sectionElement = document.createElement("section");
sectionElement.dataItem = sectionDataItem;
```

```
// Map item objects into DataItem objects
let dataItems = objects.map((object) => {
  let dataItem = new DataItem("MyObject", object.id);
  dataItem.url = object.url;
  dataItem.title = object.title;
  return dataItem;
});
```

```
// Create a data item for the grid.
let sectionDataItem = new DataItem();
sectionDataItem.objects = dataItems;
```

```
// Provide data through DOM
let sectionElement = document.createElement("section");
sectionElement.dataItem = sectionDataItem;
```

```
// Map item objects into DataItem objects
let dataItems = objects.map((object) => {
    let dataItem = new DataItem("MyObject", object.id);
    dataItem.url = object.url;
    dataItem.title = object.title;
    return dataItem;
});
```

```
// Create a data item for the grid.
let sectionDataItem = new DataItem();
sectionDataItem.objects = dataItems;
```

```
// Provide data through DOM
let sectionElement = document.createElement("section");
sectionElement.dataItem = sectionDataItem;
```

```
// Map item objects into DataItem objects
let dataItems = objects.map((object) => {
  let dataItem = new DataItem("MyObject", object.id);
  dataItem.url = object.url;
  dataItem.title = object.title;
  return dataItem;
});
```

```
// Create a data item for the grid.
let sectionDataItem = new DataItem();
sectionDataItem.objects = dataItems;
```

```
// Provide data through DOM
let sectionElement = document.createElement("section");
sectionElement.dataItem = sectionDataItem;
```

```
// Map item objects into DataItem objects
let dataItems = objects.map((object) => {
    let dataItem = new DataItem("MyObject", object.id);
    dataItem.url = object.url;
    dataItem.title = object.title;
    return dataItem;
});
```

```
// Create a data item for the grid.
let sectionDataItem = new DataItem();
sectionDataItem.objects = dataItems;
```

```
// Provide data through DOM
let sectionElement = document.createElement("section");
sectionElement.dataItem = sectionDataItem;
```

```
// Map item objects into DataItem objects
let dataItems = objects.map((object) => {
  let dataItem = new DataItem("MyObject", object.id);
  dataItem.url = object.url;
  dataItem.title = object.title;
  return dataItem;
});
```

```
// Create a data item for the grid.
let sectionDataItem = new DataItem();
sectionDataItem.objects = dataItems;
```

```
// Provide data through DOM
let sectionElement = document.createElement("section");
sectionElement.dataItem = sectionDataItem;
```

```
// needsmore event handler.
stackTemplate.addEventListener("needsmore", (event) => {

    // Fetch next batch of items.
    fetchNextBatch((objects) => {

        ...

        // Append to existing data items.
        Array.prototype.push.apply(sectionElement.dataItem.objects, dataItems);
        sectionElement.dataItem.touchPropertyPath("objects");
    });
});
}
```

```
// needsmore event handler.  
stackTemplate.addEventListener("needsmore", (event) => {  
  
    // Fetch next batch of items.  
    fetchNextBatch((objects) => {  
  
        ...  
  
        // Append to existing data items.  
        Array.prototype.push.apply(sectionElement.dataItem.objects, dataItems);  
        sectionElement.dataItem.touchPropertyPath("objects");  
    });  
  
}
```

```
// needsmore event handler.
stackTemplate.addEventListener('needsmore', (event) => {

The screenshot shows the Web Inspector interface for a simulator. The title bar reads "Web Inspector — Simulator — WWDC — com.apple.tvml.WWDCDemo". The interface includes a search bar, a refresh button, and three status icons (3 messages, 0 warnings, 0 errors). The main area is divided into three tabs: "Elements", "Network", and "Storage". The "Elements" tab is active, showing a DOM tree with the following structure:

- <document>
 - <head>...</head>
 - <stackTemplate>...</stackTemplate> = \$0

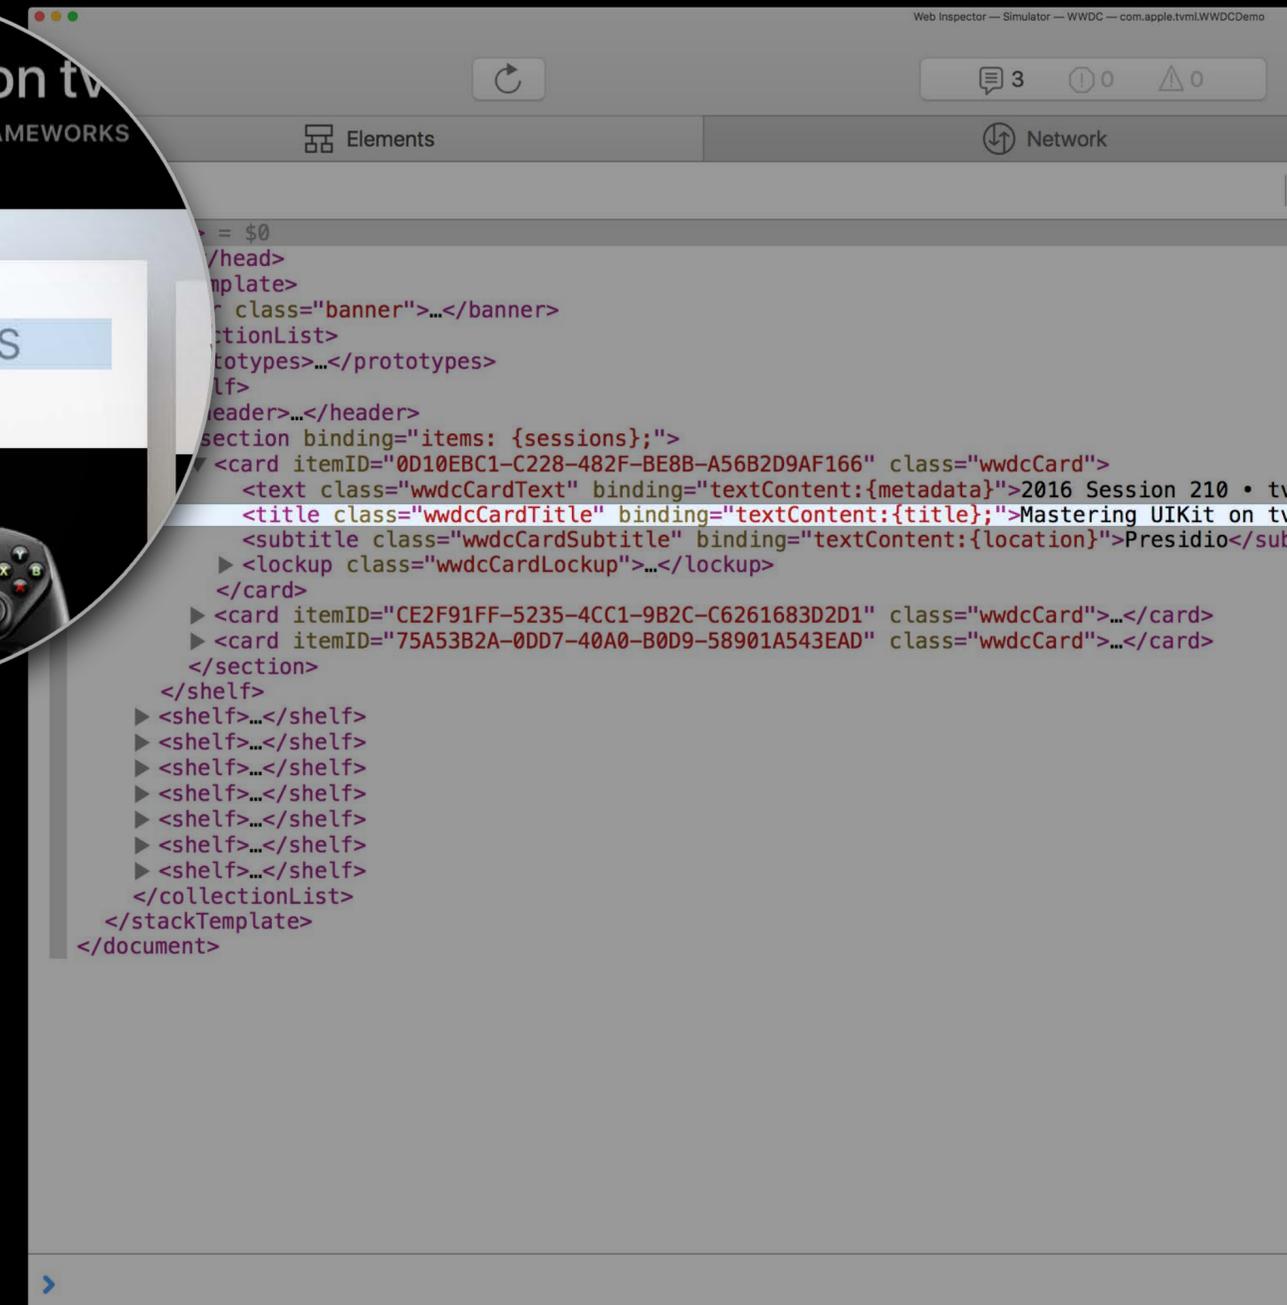

The selected node, <stackTemplate>, is highlighted in blue. The right-hand pane shows the "Node" view for this element, with the following details:

- Identity**
 - Type: Element
 - Name: stackTemplate
- Attributes**
 - No Attributes
- Properties**
- Event Listeners**
- needsmore**
 - Node: [stackTemplate](#)
 - Function: (anonymous function)
 - Bubbling: Yes

Local and Session Storage Inspection

NEW

The screenshot shows the Web Inspector interface for a simulator. The title bar reads "Web Inspector — Simulator — WWDC — com.apple.tvml.WWDCDemo". The top navigation bar includes a refresh button, a message count of 3, and warning icons. A search bar is located on the right. The main interface is divided into three panels: "Elements", "Network", and "Storage". The "Storage" panel is active and shows a tree view with "All Storage" selected, containing "Application Cache", "Local Storage", and "Session Storage". The "Local Storage" panel is expanded, displaying a table of key-value pairs.

Key	Value
featuredSession	2016-215
lastRequestLoadTime	{"loadTime": 7, "url": "http://localhost/wwdc.tvml"}
watchedSessions	{}

Local and Session Storage Inspection

NEW

The screenshot shows the Web Inspector interface with the Storage tab selected. The 'Local Storage' section is expanded, displaying a table of key-value pairs. A context menu is open over the first row, offering actions: Copy Row, Copy Table, Edit "Key", and Delete.

Key	Value
featuredSession	2016-215
lastRequest	{"loadTime": 7, "url": "http://localhost/wwdc.tvml"}
watchedSe	{}
