Google Hacking = Lulz

REAL WORLD THREAT

LulzSec and Anonymous believed to use Google Hacking as a primary means of identifying vulnerable targets.

Their releases have nothing to do with their goals or their lulz. It's purely based on whatever they find with their "google hacking" queries and then release it.

- A-Team, 28 June 2011

 - `select.*from.*request\..QUERYSTRING`

The screenshot shows a Google Code Search result for the query `select.*from.*request\..QUERYSTRING`. The search results page displays a code snippet from a file named `post.asp`. The code snippet is as follows:

```
45: strSql = "SELECT * from reply where reply_id = " & Request.QueryString("reply_id")
46: msg = "<br><br>×çÒâ£°Ö»ÓÐ,ĀĪAŌĀ×÷Ōß°Í¹UÀiŌt²ĀĀŪtā×Ōā,ŏiū×ó."

Google Hacking Database Reborn

9th November 2010 - by admin

The incredible amount of information continuously leaked onto the Internet, and therefore accessible by Google, is of great use to penetration testers around the world. Johnny Long of [Hackers for Charity](#) started the Google Hacking Database (GHDB) to serve as a repository for search terms, called Google-Dorks, that expose sensitive information, vulnerabilities, passwords, and much more.

GOOGLE
HACKING-DATABASE

As Johnny is now pursuing his [mission in Uganda](#), he has graciously allowed us at The Exploit Database to pick up where the GHDB left off and resurrect it. It is with great excitement that we announce that the [GHDB](#) is now being hosted by us and actively maintained again. This will allow us to tie the GHDB directly into our database of exploits providing the most current information possible.
