Searching the Library

Overview

There are two ways you can search the FUSE Message Broker library:

- the FUSE source search field
 - Google
-

FUSE source search

The FUSE source web site has an integrated search feature that will return hits from the entire Web site. Using it may return a number of non-documentation hits.

The FUSE source site search is accessed using the **Search** box that appears in the header of the main documentation site.

Google search

Use Google directly and narrow the search scope using `site:fusesource.com/docs/broker`.

This method will limit the search to the FUSE Message Broker documentation. You can limit the scope further by adding a version number to the `site:` string.

For example to search the documentation for references to polling the file system you could enter `site:fusesource.com/docs/broker/5.1/ JMS` into the Google search field. Only results from the FUSE Message Broker version 5.1 library will be returned.
