Inform

Elements of Good Animations

Short

Smooth

A close-up, macro photograph of lush green grass blades. The blades are long, narrow, and pointed, with a vibrant green color. The lighting is bright, creating highlights and shadows that emphasize the texture and structure of the grass. The background is a soft, out-of-focus green, making the foreground blades stand out.

Natural

Arbitrary

Purposeful
~~Arbitrary~~

Samples

List Animation

Animating ListView Item Changes

```
adapter.remove(item);
foreach (child in listview) {
    child.setHasTransientState(true);
    // get pre-layout location
}
ViewTreeObserver observer = listview.getViewTreeObserver();
observer.addOnPreDrawListener(new OnPreDrawListener() {
    public boolean onPreDraw() {
        observer.removeOnPreDrawListener(this);
        foreach (child in listview) {
            // get post-layout location
            int deltaY = preLayoutTop - postLayoutTop;
            child.setTranslationY(deltaY);
            child.animate().translationY(0);
            child.setHasTransientState(false);
        }
        return true;
    }
});
```

Activity Animations

Activity Animations: Launching Activity

```
Intent subActivity = new Intent(...);  
  
subActivity.putExtra("package.propertyname1", val1).  
                putExtra("package.propertyname2", val2);  
  
startActivity(subActivity);  
  
overridePendingTransitions(0, 0);
```

Activity Animations: Launched Activity

AndroidManifest.xml

```
<activity  
    android:name="..."  
    android:label="..."  
    android:theme="@style/Transparent" >  
</activity>
```

styles.xml

```
<style name="Transparent">  
    <item name="android:windowIsTranslucent">true</item>  
    <item name="android:windowBackground">@null</item>  
</style>
```

Activity Animations: Launched Activity (2)

```
public void onCreate(Bundle savedInstanceState) {  
    // ...  
    Bundle bundle = getIntent().getExtras();  
    String val1 = bundle.getString("packagename.propertyname1");  
    int val2 = bundle.getInt("packagename.propertyname2");  
  
    if (savedInstanceState == null) {  
        ViewTreeObserver observer = mImageView.getViewTreeObserver();  
        observer.addOnPreDrawListener(new OnPreDrawListener() {  
            public boolean onPreDraw() {  
                // Get post-layout view locations/sizes  
                // setup/run animations  
            }  
        });  
    }  
}
```
