## Timeline

# Goal of this talk

## Timeline

# Overview

- Prerequisites
  - Developers for Glass
  - Android basics
- Overview
  - Run applications on Glass platform without root access
  - Root your Glass (void your warranty)

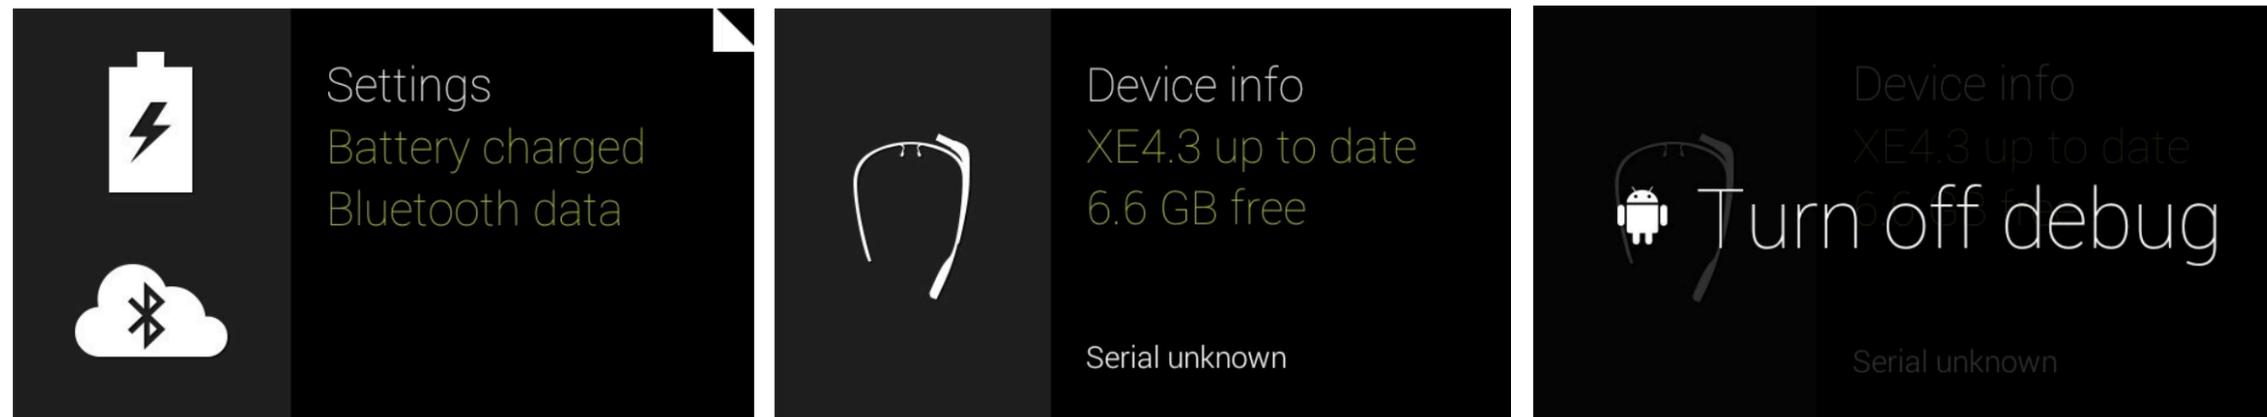

# Experiment with Android Applications

Before you void your warranty

# Android Debug Bridge

- Client (Laptop)
  - download the latest Android SDK
  - `[SDK directory]/platform-tools/adb`
- Host (Glass)
  - use "Device Info" settings card

# Glass platform

- Operating system
  - Android ICS MR1 (4.0.4)
  - API level 15
- Hardware
  - GPS, wifi, bluetooth
  - Microphone, Camera, IMU sensors, **Touchpad**
  - **Transparent display** (640x360 px)

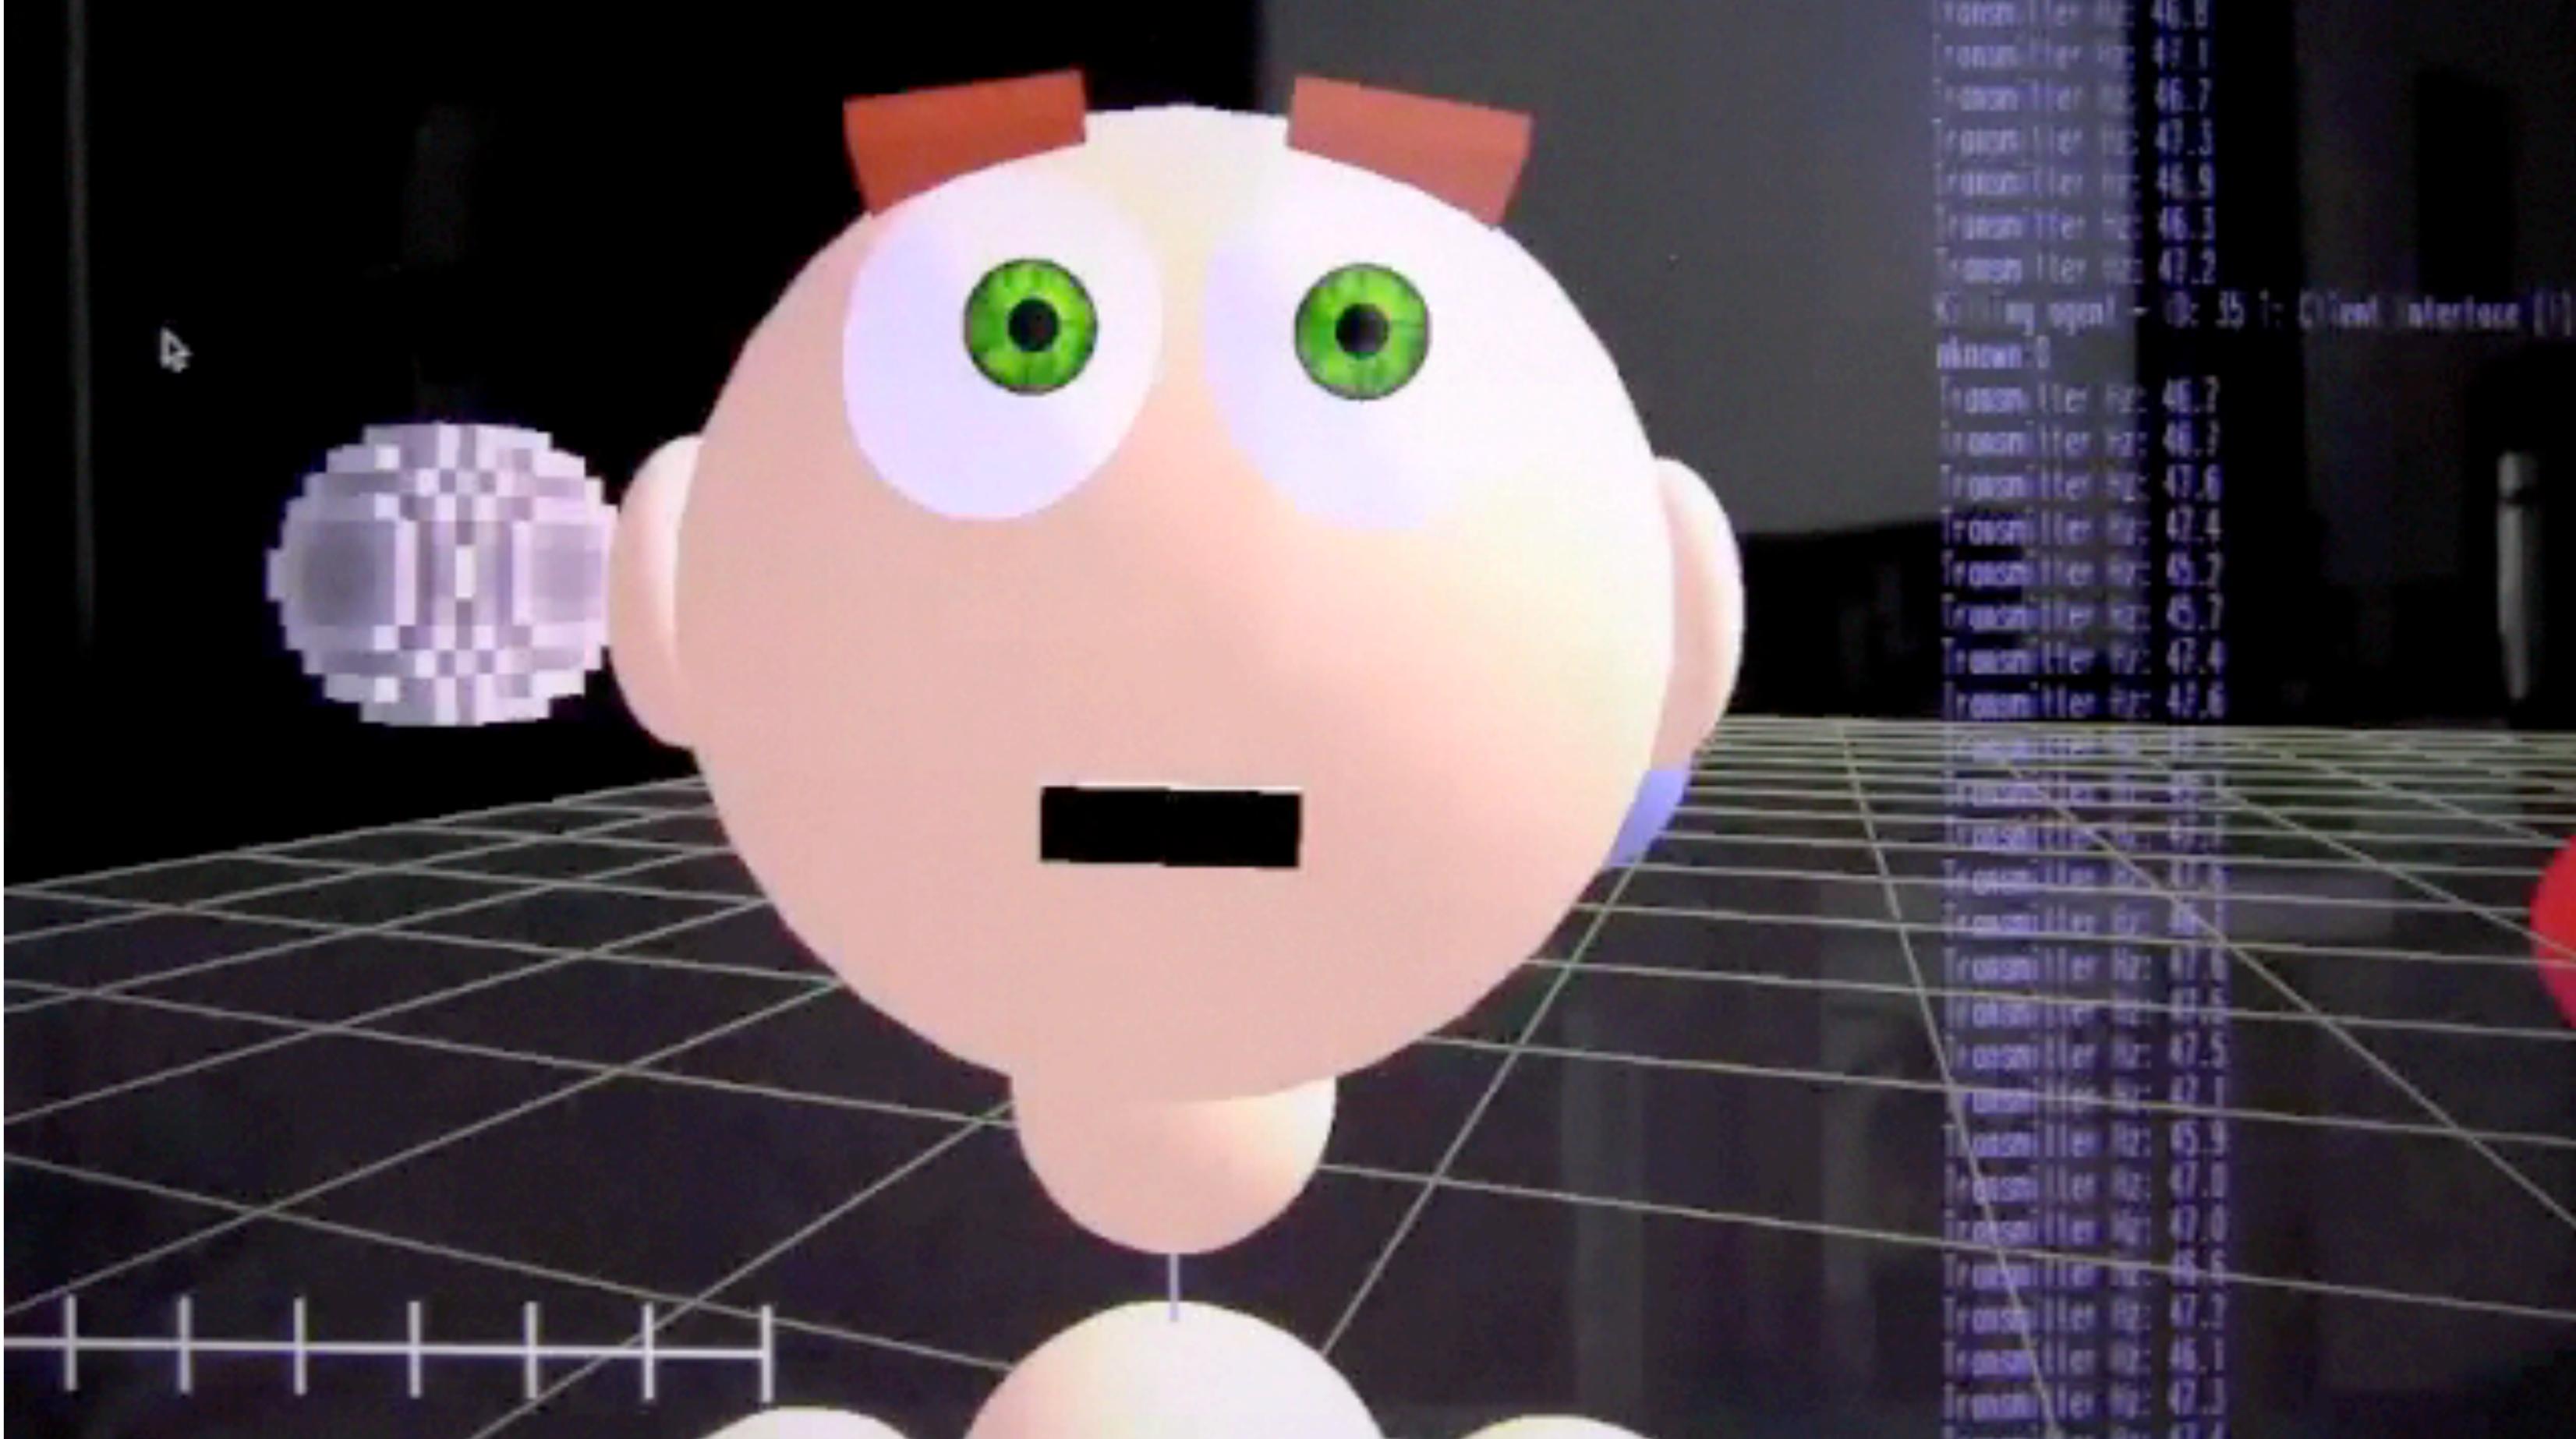

# Demo

- From AOSP
  - Launcher
  - Settings
- From Android SDK samples
  - Notepad

# Video

- From High Fidelity Inc.
  - Glass Explorer
  - Avatar app
    - motion sensors
    - microphone

# Limitations

- No root access
  - cannot access user data space

```
$ adb shell ls /data  
open failed, Permission denied
```

- cannot delete stock Glass system applications

```
shell@android:/system/app $ rm GlassHome.apk  
rm failed for GlassHome.apk, Permission denied
```

- cannot replace the operating system

# Gain root access

Void your warranty

# Become Root on Glass system

```
$ adb reboot bootloader  
$ fastboot oem unlock  
$ fastboot flash boot boot.img  
$ fastboot reboot  
$ adb root
```

# Become Root on Glass system

```
$ adb reboot bootloader  
$ fastboot oem unlock  
$ fastboot flash boot boot.img  
$ fastboot reboot  
$ adb root
```

## Access the bootloader

Host (Glass):

Custom bootloader for Android  
“fastboot” protocol, USB-based

Client:

[SDK directory]/platform-tools/fastboot

# Become Root on Glass system

```
$ adb reboot bootloader  
$ fastboot oem unlock  
$ fastboot flash boot boot.img  
$ fastboot reboot  
$ adb root
```

## Unlock the device

Removes security precaution

Can flash system partitions with custom  
rom images

== Erases all user data

== Void your warranty and no OTA update

# Become Root on Glass system

```
$ adb reboot bootloader  
$ fastboot oem unlock  
$ fastboot flash boot boot.img  
$ fastboot reboot  
$ adb root
```

Replace the boot image

*[http://developers.google.com/  
glass/downloads](http://developers.google.com/glass/downloads)*

# Become Root on Glass system

```
$ adb reboot bootloader  
$ fastboot oem unlock  
$ fastboot flash boot boot.img  
$ fastboot reboot  
$ adb root
```

# Become Root on Glass system

```
$ adb reboot bootloader  
$ fastboot oem unlock  
$ fastboot flash boot boot.img  
$ fastboot reboot  
$ adb root
```

# Video

- Steps to root your device

# Demo

- Run ubuntu on Glass device

**Android Terminal Emulator**

# Summary

## Debug mode

Can install apk's

Example: Settings, Launcher,  
NotePad

Under warranty  
OTA update

## Root mode

Can change system partitions  
(e.g., /data, /system/apps)

Example: Run Ubuntu

Void your warranty  
No OTA update
