Highly Secure

- Encapsulation
- Access
- Encryption

Consistently fast

- VMs
- Storage
- Network
- Scaling

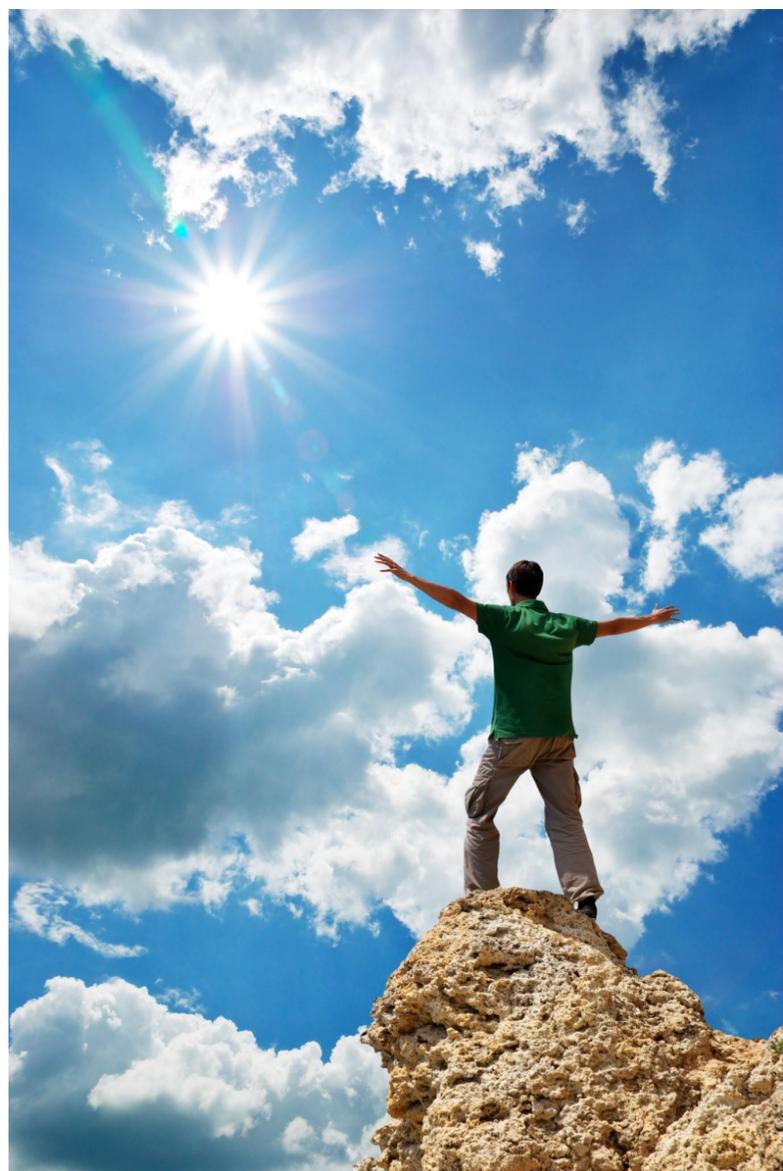

1.5 TB Minutesort

www.mapr.com/mapr-google

Open

- CentOS & Debian
- APIs for everything
- UI and Tools use the same APIs you do
- Rapidly growing ecosystem

"Google Compute Engine has an impressive network and we've experienced **exceptional speed and boot times** with the platform. Google has achieved this performance while also having a **remarkable focus on security**, including data encryption at rest. In a recent survey, our customers continue to tell us the **#1 challenge in moving to the cloud is security**, and we're happy to see that **Google is directly addressing this concern**"

Thorsten von Eicken, CTO

RIGHT SCALE[®]
CLOUD MANAGEMENT

"My pipe dream is for Google to combine Compute Engine's flexible virtual machines with App Engine's ridiculously impressive datastore."

- Ben Kamens,
Khan Academy lead developer

Cloud
Datastore

Instances to suit diverse workloads

New Instance Types

g1-small

1.7 GB RAM
shared core, 1.38 GCEU

5.4c / hr US

f1-micro

0.6 GB RAM
shared core, burstable

1.9c / hr US

Powerful Metadata

Easy access from within an instance

```
GET http://metadata/computeMetadata/v1beta1/instance/  
attributes/  
disks/  
network-interfaces/  
service-accounts/  
tags  
...
```

HTTP

```
GET http://metadata/computeMetadata/v1beta1/project/  
attributes/  
...
```

Powerful Metadata

Update Custom Metadata on the fly

```
POST https://www.googleapis.com/compute/v1beta14/projects/{project}/zones/{zone}/instances/{instance}/setMetadata
```

HTTP

```
{  
  "kind": "compute#metadata",  
  "fingerprint": bytes,  
  "items": [  
    {  
      "key": string,  
      "value": string  
    }  
  ]  
}
```

Persistent Disk

10

terabytes

/root

hot

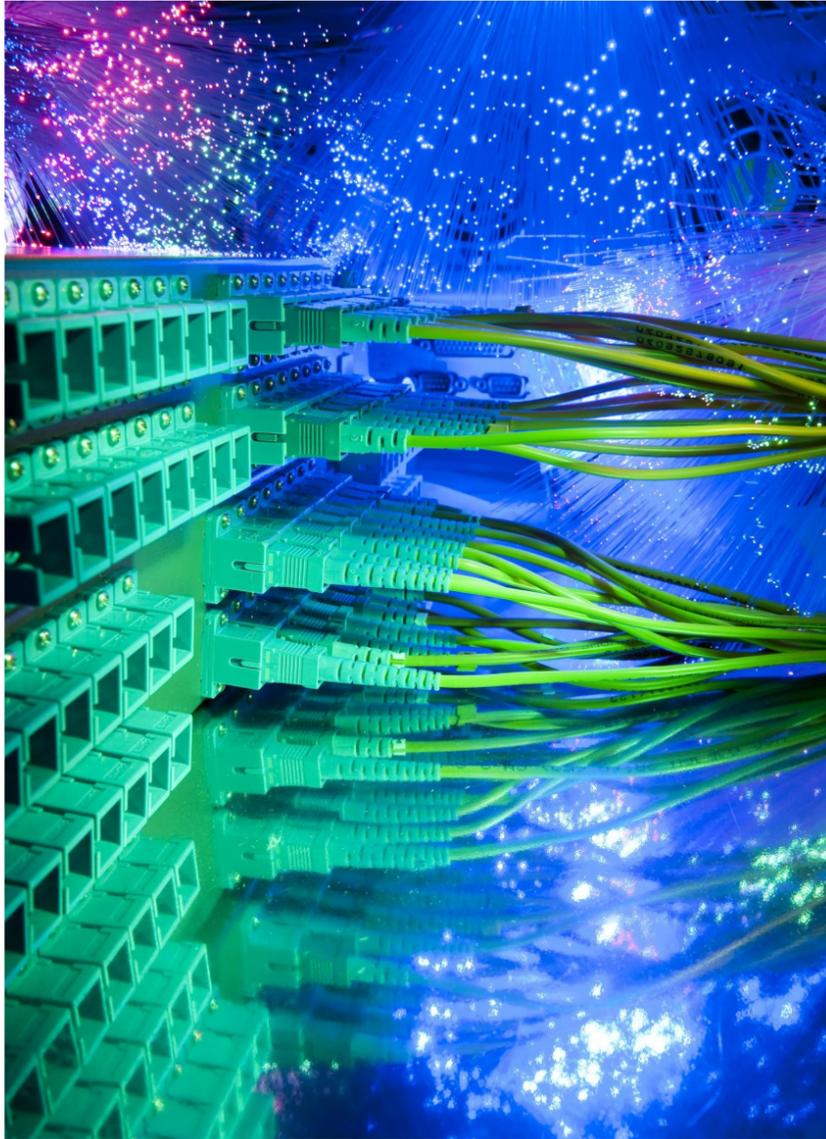

attach & detach

sub-hour billing

- 1 minute increments
- 10 minute minimum

Routing, Gateways and VPNs, oh my!

- New Advanced Routing Capabilities
- Powerful, fine-grained control over packet routing

Compute Engine in Action
