Overview

Display Advertising

Ad Exchanges

Display Advertising with RTB

Challenges

- Latency - 100ms to respond
- Scale - 100k request a second

What is Real-Time Bidding?

How long is 100ms?

- 100ms = Ferrari FXX Gear Change
- 134ms = Light travels around the Equator
- 200ms = Human brain recognises emotion in facial expressions
- 300ms = Human eye blink

Why RTB?

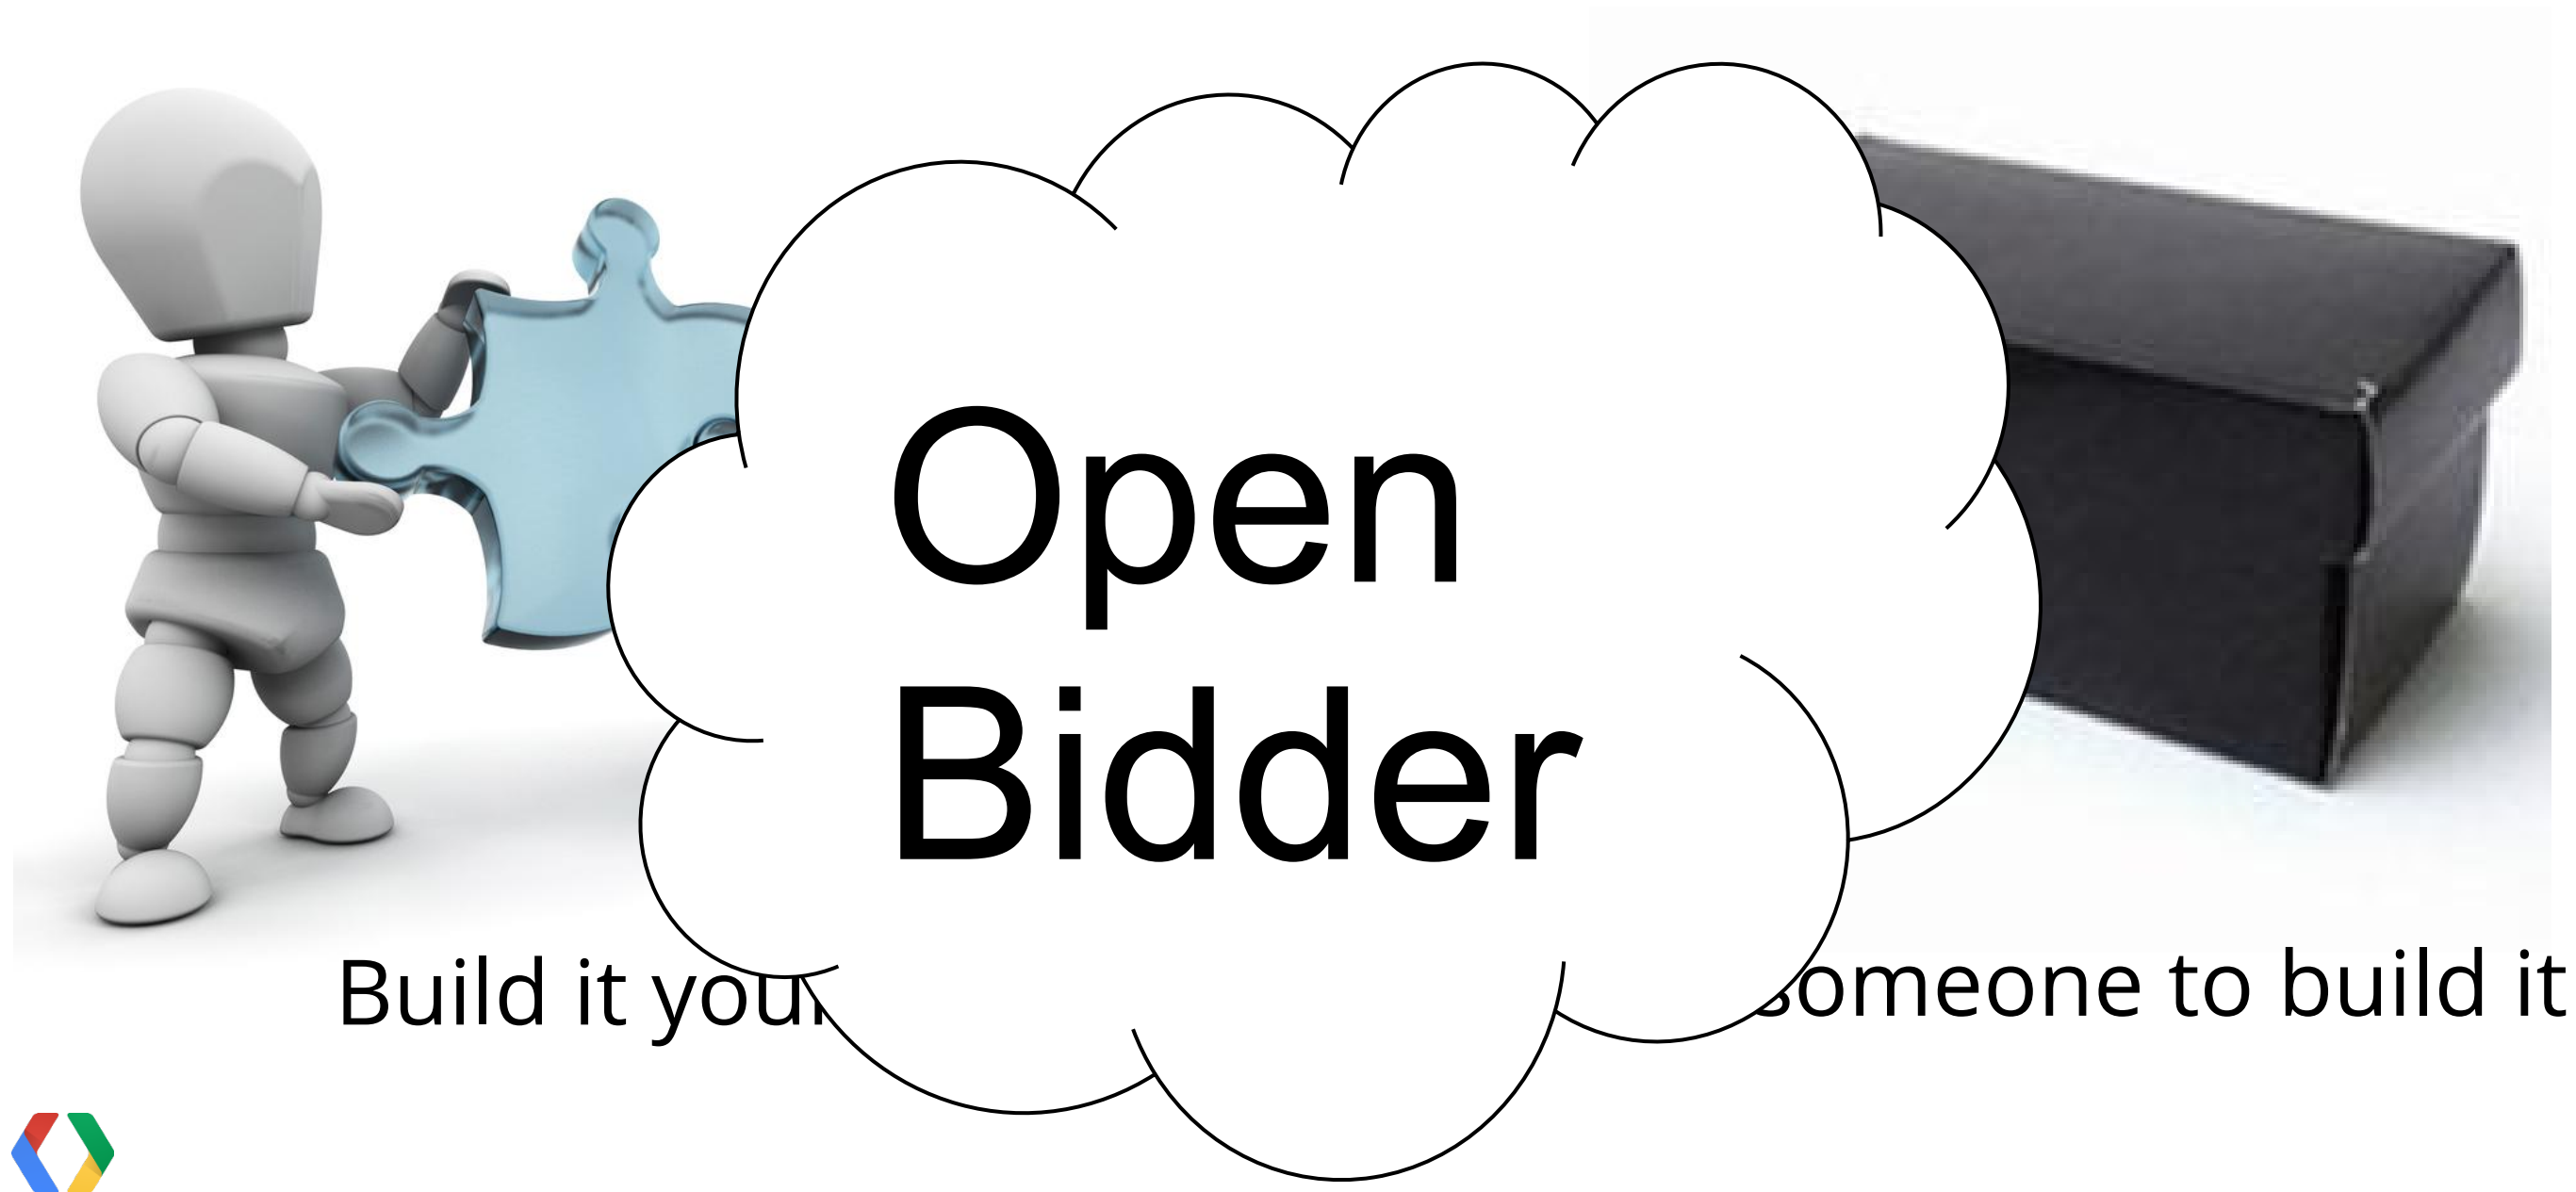

\$40B Market in 2013

59% Annual Growth through 2016

RTB Spending accounted for **\$1.9B in 2012**

Participating in RTB

Open Bidder

The Platform for RTB Innovation

Open Bidder is a **fully customizable** toolkit for deploying and managing real-time bidders on **Google Compute Engine** for bidding on **Ad Exchanges***.

The goal of Open Bidder is to give you **everything** you need to start real-time bidding. All you need to write is your **custom** bidding logic.

* Currently DoubleClick Ad Exchange is directly supported.

Open Bidder

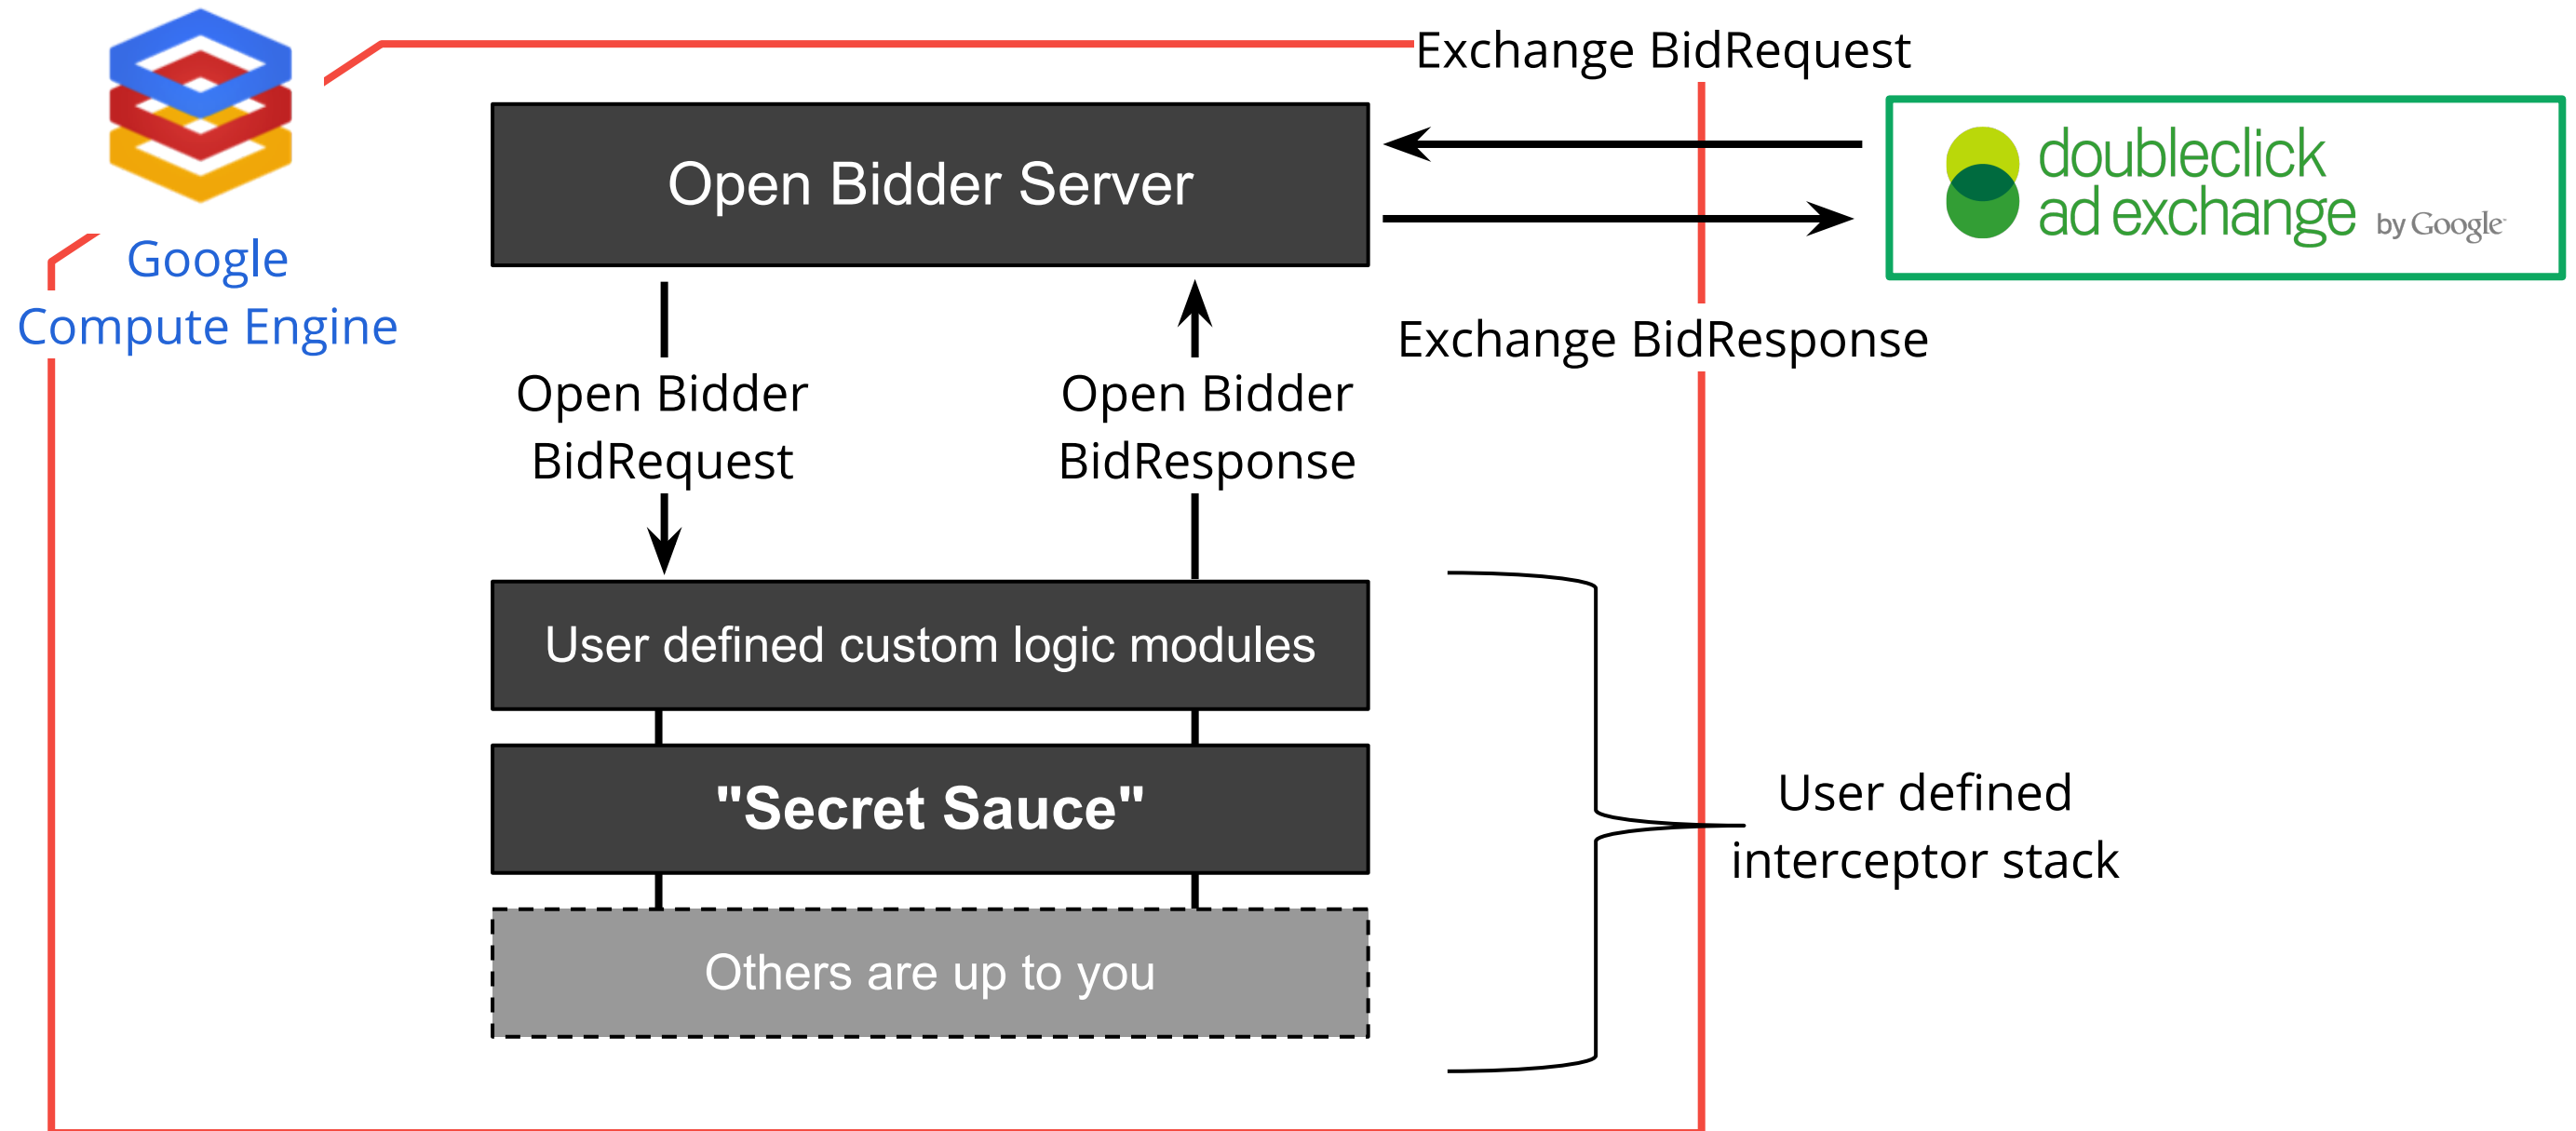

The Platform for RTB Innovation

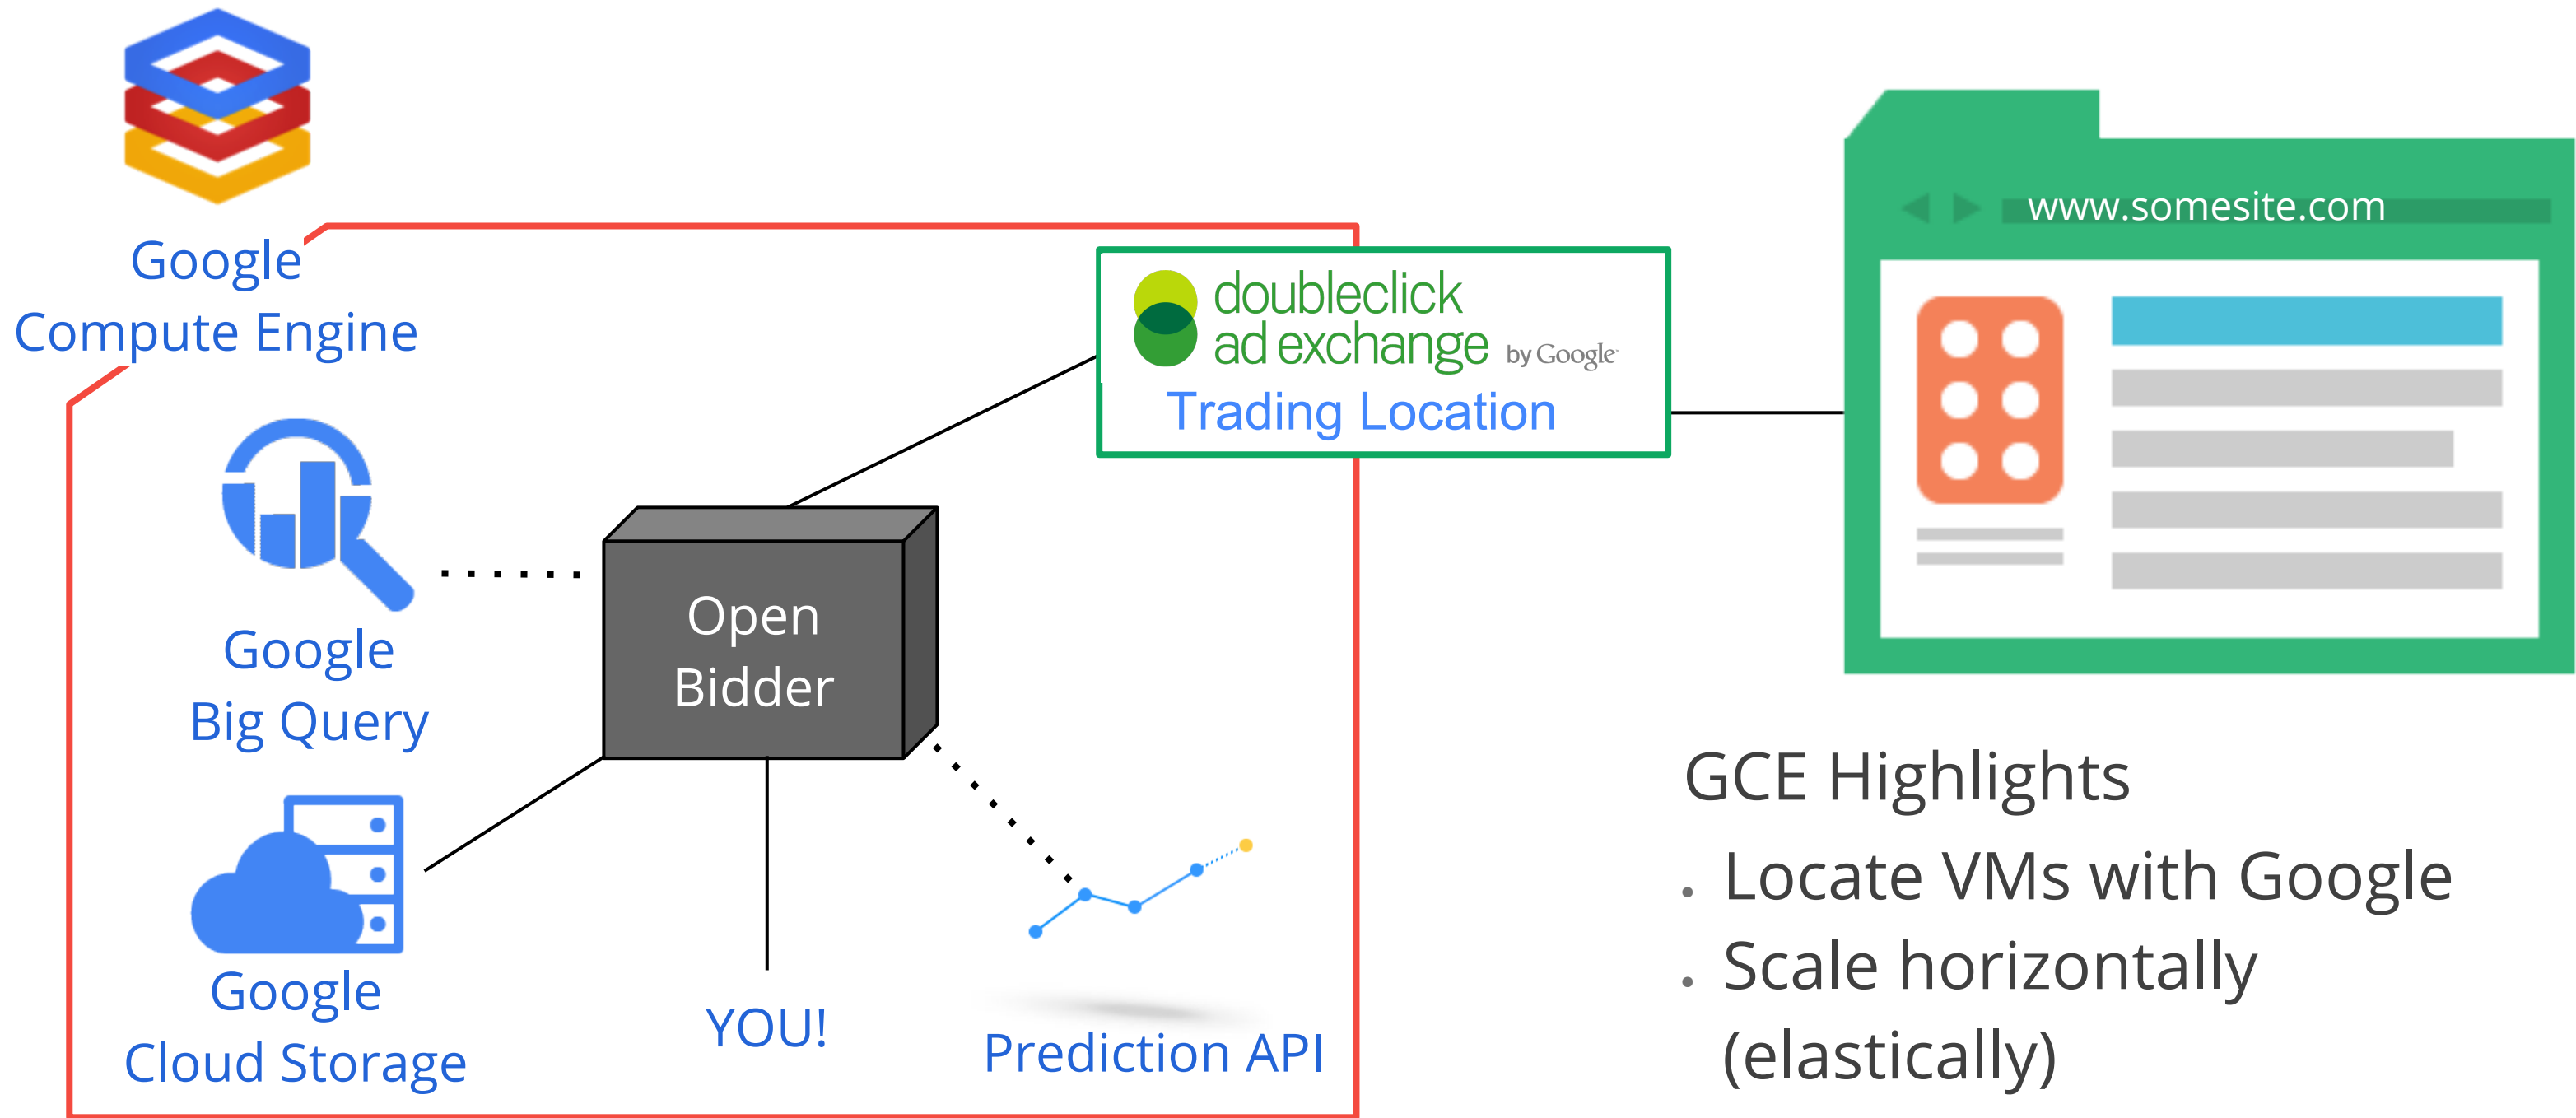

- Aimed to lower the bar of entry to RTB
- Let you focus on your value add (aka cool innovation)!
- Hosted on GCE

"During peak hours, Google Compute Engine provides ~20% lower latency."

Life of a Bid Request

GCE Highlights

- Locate VMs with Google
- Scale horizontally (elastically)
- Added value services

Utilizing the Cloud

Open Bidder is optimized to run on Google Compute Engine utilizing

- [Google Cloud Storage](#)

Store and access your data on Google's scalable storage and network infrastructure

- [Google App Engine](#)

Run your apps, host your sites, store your data

- [Google BigQuery](#)

Analyze terabytes of data with just a click of a button

Technical Details

Open Bidder

Features

- Bidding
- Impression callbacks
- Click callbacks
- Cookie match requests (great for remarketing)

Open Bidder Interceptor Model

Inspired by the Java Filter API

Java

```
public interface InterceptorChain<Req, Resp> {  
    void proceed();  
    Req getRequest();  
    Resp getResponse();  
}  
  
public interface Interceptor<Req, Resp> {  
    void execute(InterceptorChain<Req, Resp> chain);  
}
```

Secret Sauce Interceptor

Java

```
public class SecretSauceInterceptor extends BidInterceptor {  
    public void execute(InterceptorChain<BidRequest, BidResponse> chain) {  
        for (AdUnit adUnit : chain.getRequest().getPreTargetedAdUnits()) {  
            chain.getResponse().putBid(ThirdPartyAdBid.newBuilder()  
                .setThirdPartyAd(HtmlThirdPartyAd.newBuilder().build())  
                .setBidMicros(secretSauce())  
                .build());  
        }  
        chain.proceed();  
    }  
}
```

“We're going to move all of our ad spend to Open Bidder”

Open Bidder Beta Client

Product Vision

Product Vision

Additional
Components

Continued development of new components based on your feedback!

More GCE

Continued integration of new Compute Engine value adds

Developer
Community

Support the growth of a developer community that gives back to the core and makes it even better!

“There is a gap in the bidder landscape for networks looking to use their own decisioning logic. Open Bidder: brilliant solution. Where do I sign?”

Seph Zdarko, COO
TwelveFold
