Why VDI?

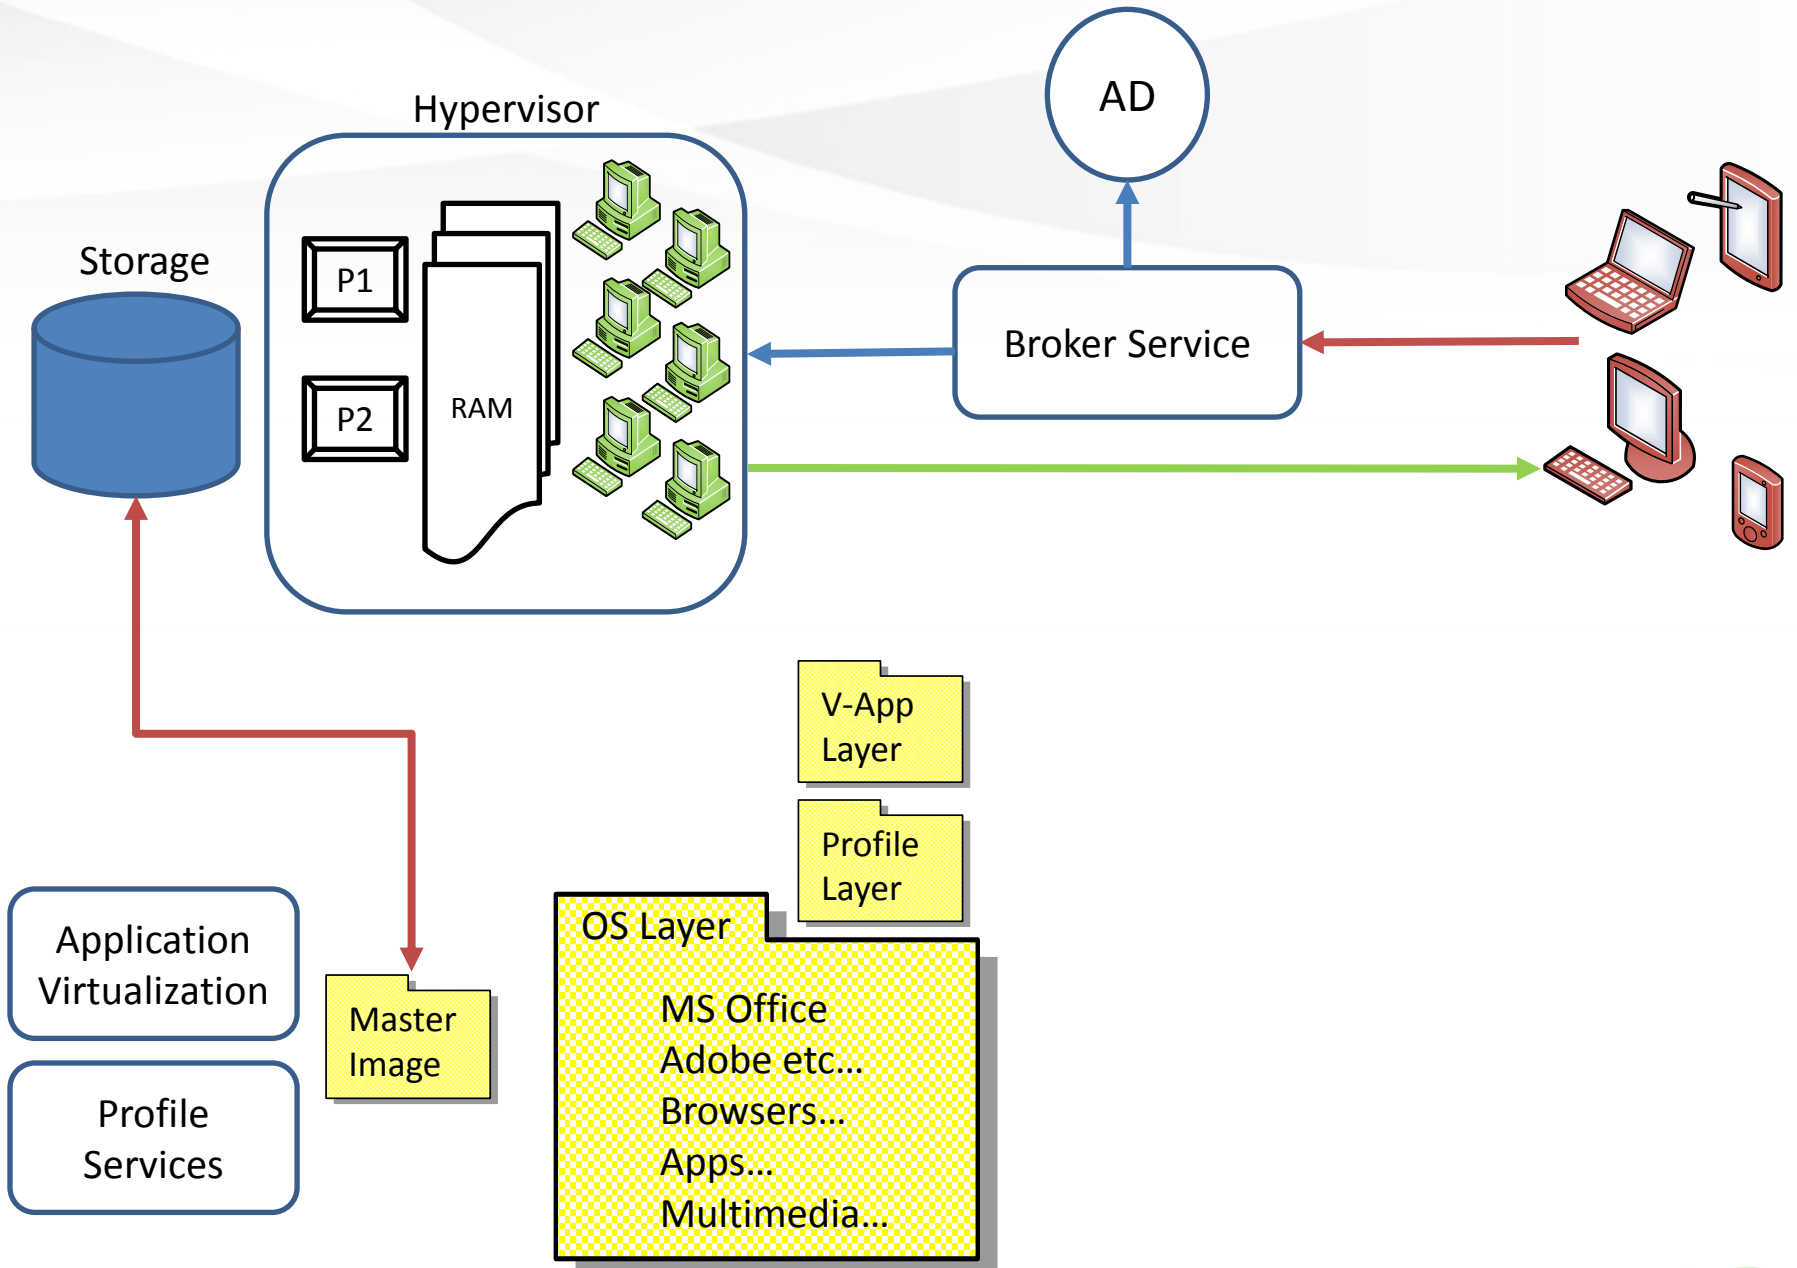

- **Cost savings:** Deliver a virtual PC on any device (PC, MAC, Tablet, iPad, Android, ChromeOS, Kindle, Linux etc...) *for less than what most are paying for a traditional PC today.*
- **Operational effectiveness:** Centralized management to provision, deploy and update much faster.
- **Connected workplace:** Employees/students can access the network and connect to **whatever, whenever, & wherever.**
- **Better security:** Eliminate breach of data, meet compliance regulations, and drastically reduce viruses.
- **Business continuity:** Faster restoration in the event of an outage and **ZERO** data loss.
- *Break free of the never ending buy-configure-deploy-maintain-fix-repeat.*
