End-to-End IMS Services

Toolbox for Easy Development and Deployment

Why IMS

Why IMS Client Platform

IMS Services and JSR 281

Agenda

IMS—A Service Enabler

IMS Applications in Devices

JSR 281—Future for Client Development

Developing Services

Conclusions

Agenda

IMS—A Service Enabler

- About IMS
- An Architecture and Framework
- Rich Services
- E2e Concept

IMS Applications in Devices

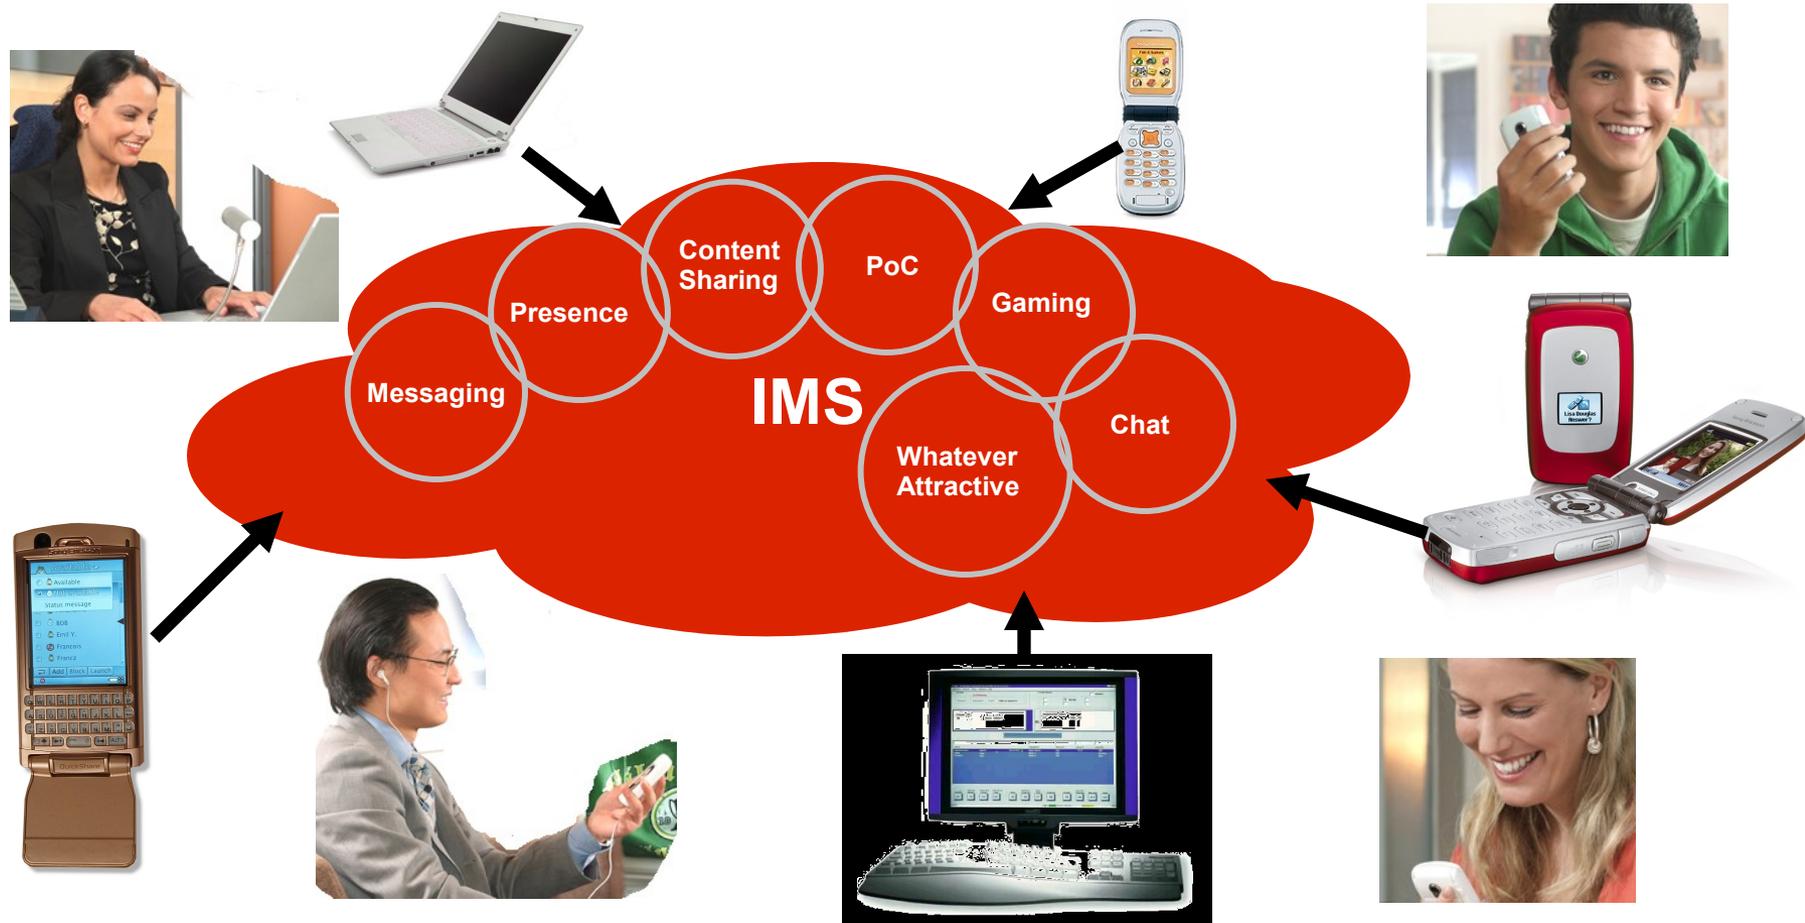

JSR 281—Future for Client Development

Developing Services

Conclusions

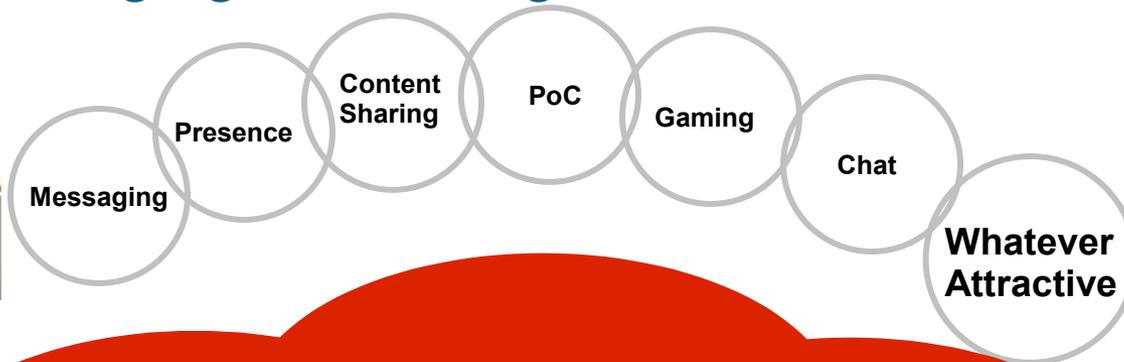

It's Not Just About Technology

It's About People Sharing Experience in Their Devices

IMS...

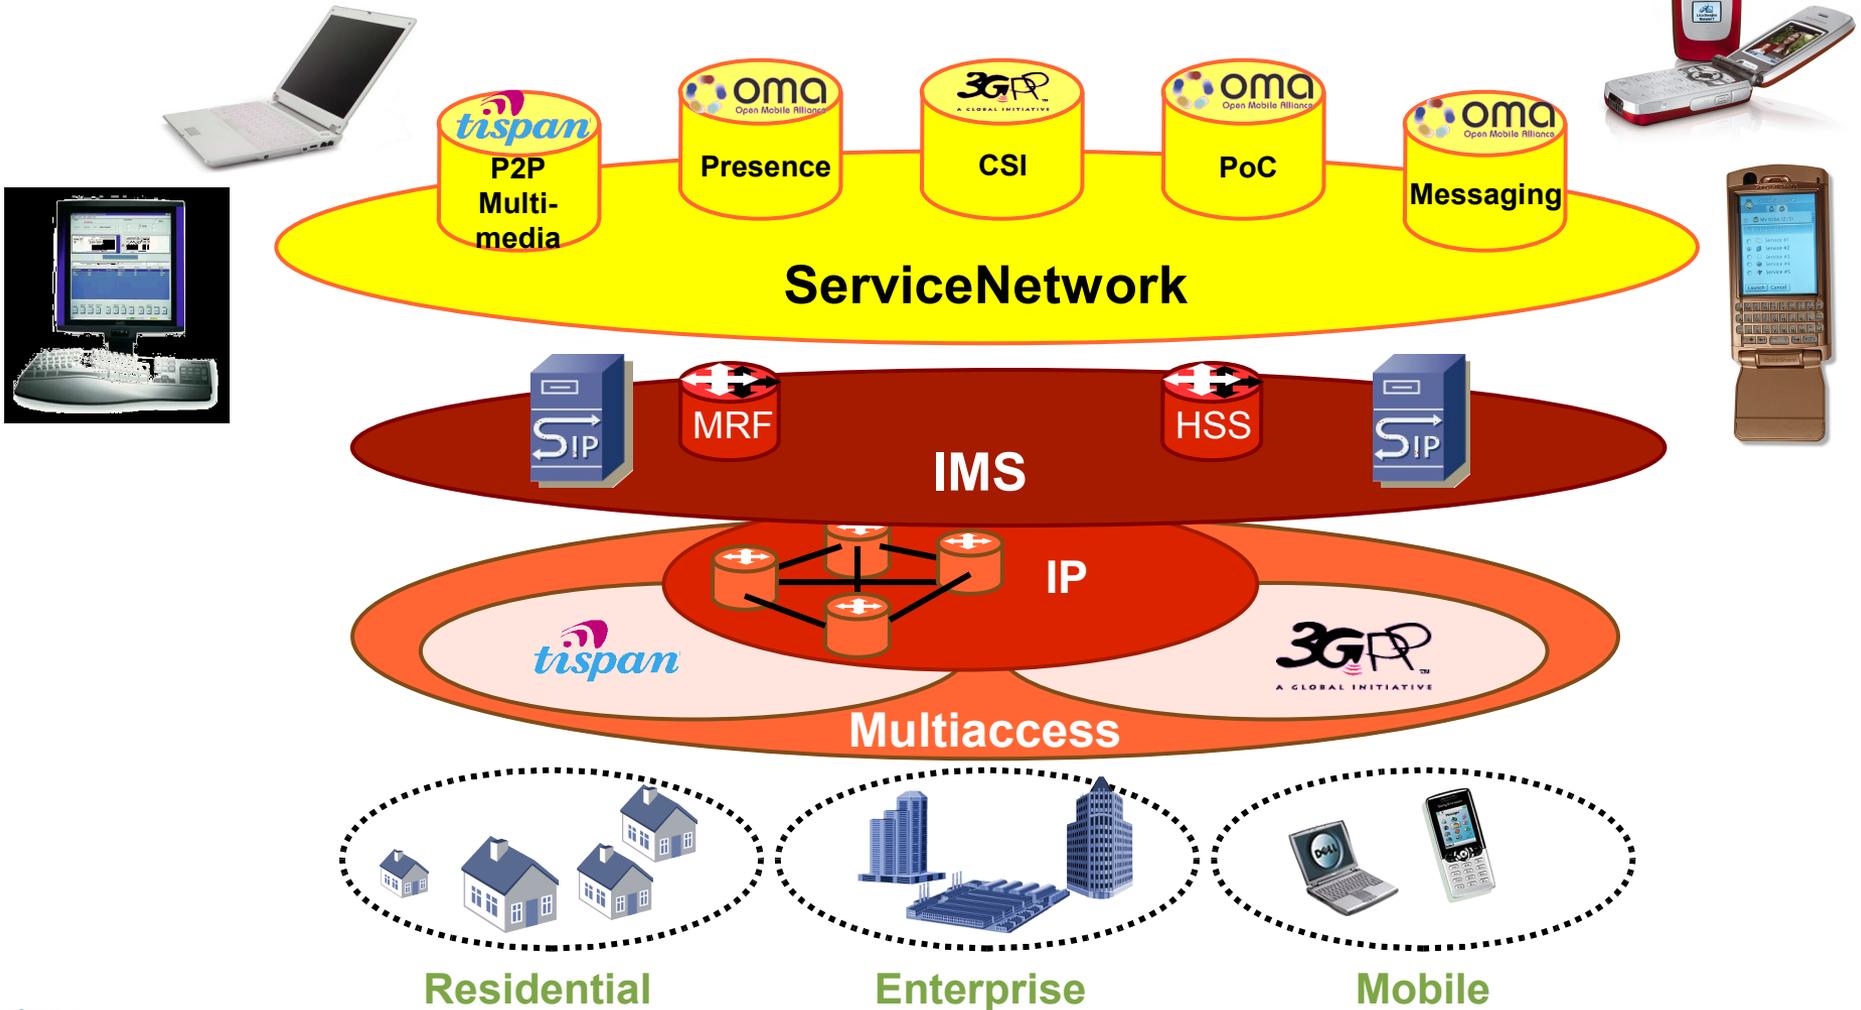

Is About Merging Technologies to Deliver E2e Services

IMS

- Openness
 - Innovation
 - Short TTM
 - Multimedia
-
- Standardization (3GPP and IETF, ITU-T, ANSI, ATIS, TISPAN, OMA, GSMA)
 - Interoperability
 - Multiaccess
 - Secure reachability
 - Payment security
 - Quality of Service

IMS for Multiple Applications

IMS Is the Framework

E2E

Reachability

Mobility

Interoperability

Convergence

Quality of Service

MultiMedia connections

Security

Charging

Agenda

IMS—A Service Enabler

IMS Applications in Devices

JSR 281—Future for Client Development

- Developer's Perspectives
- Developer-friendly IMS Terminal
- IMS Client Platform
- DEMO

Developing Services

Conclusions

Developer's Perspectives—A Challenge

Technology

- A number of communication protocols to use SIP/SDP/RTP/RTCP/MSRP/XML/XCAP
- A number of standards to follow
- A number of Real Time requirements to full fill
- A number of low-level tasks to manage
- A number of service enablers to implement

End-user rich application

- A number of services to aggregate using service enablers
- Attractive and competitive GUI for the user
- Simple and engaging user interaction

But...

...The Solution Is There—Two Domains

IMS Framework

- Domain of the device platform provider

IMS Applications

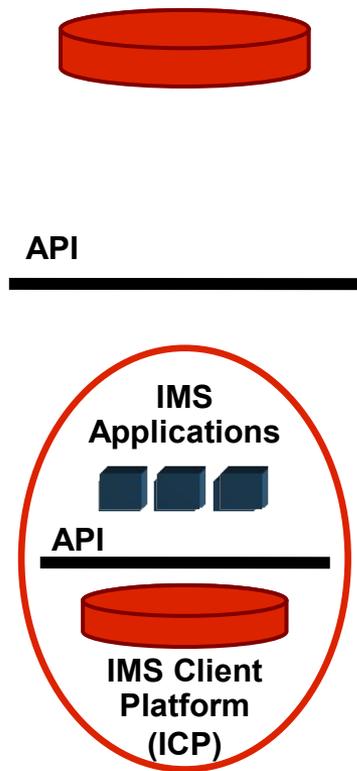

- Domain of the application developers

A Developer—Friendly IMS Terminal

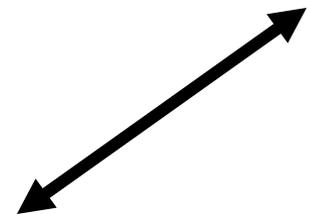

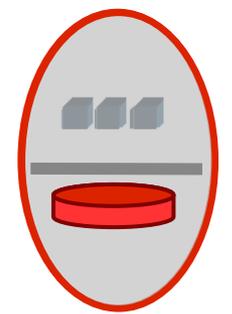

- Layered architecture
 - IMS Client Platform—Realization of IMS Framework
 - Focus on IMS technology
 - Focus on service logic
 - Focus on co-location of Applications
 - High-level API
 - Hides all technology details
 - Offers straight-forward application-level methods
 - Applications
 - Focus on usability and user interaction
 - Focus on attractive GUI
 - Focus on attractive service behaviour

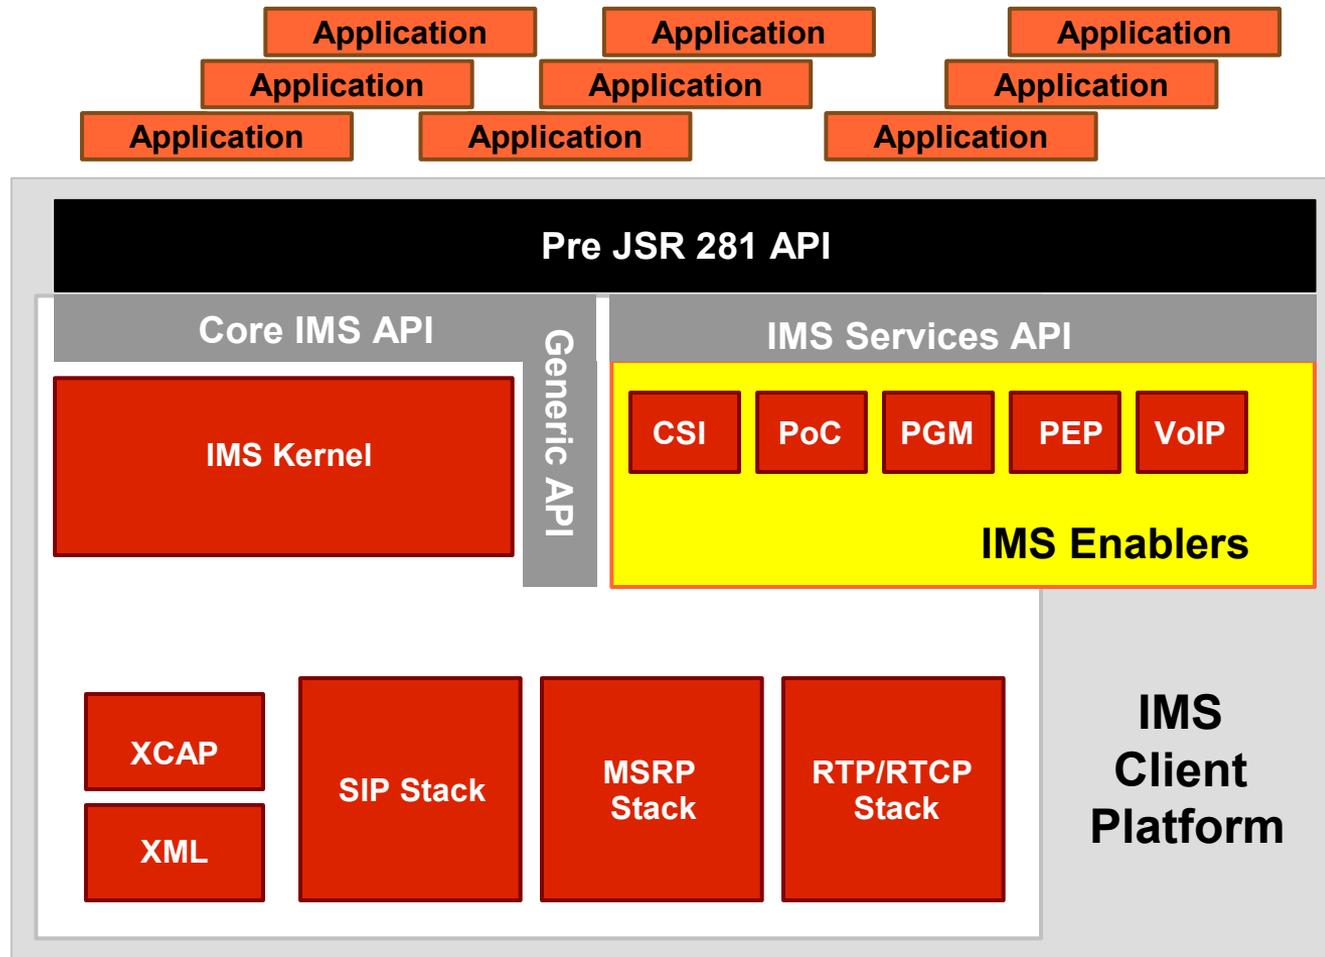

Why IMS Client Platform

- Enables easy development, deployment and co-existence of IMS Clients for different services
 - Creates a generic horizontal IMS platform for co-executing IMS Clients
 - Secures conformance to applicable IETF, 3GPP and OMA standards
 - Manages correlation between IMS enablers
 - Manages low-level tasks for the Clients
 - Exposes IMS enablers through high level Java™ technology API
- Offers Convergence
- Secures IOT

IMS Client Platform Architecture

Benefits

Ease Of Application Deployment

- Java technology API
- Core IMS API—for new non-standardized services
 - Generic service sessions
 - Multimedia connections
- Service API—for standardized IMS services
 - Presence and Group List Management
 - PoC—Push to Talk over Cellular
 - VoIP—Voice over IP
 - CSI—Circuit Switch IMS Integrated Services
- Combine both to create fancy Java technology-based applications

Benefits

Ease Of Application Deployment

- IMS technology encapsulation in the platform
 - Multi-vendor interoperability
 - Fixed and mobile convergence
- Broad terminal support
 - Feature phones
 - Smart phones
 - Desk phones
 - PC
 - Home Gateways
- Java technology—fast application delivery

DEMO

A Fancy IMS e2e Service

Agenda

IMS—A Service Enabler

IMS Applications in Devices

JSR 281—Future for Client Development

Developing Services

Conclusions

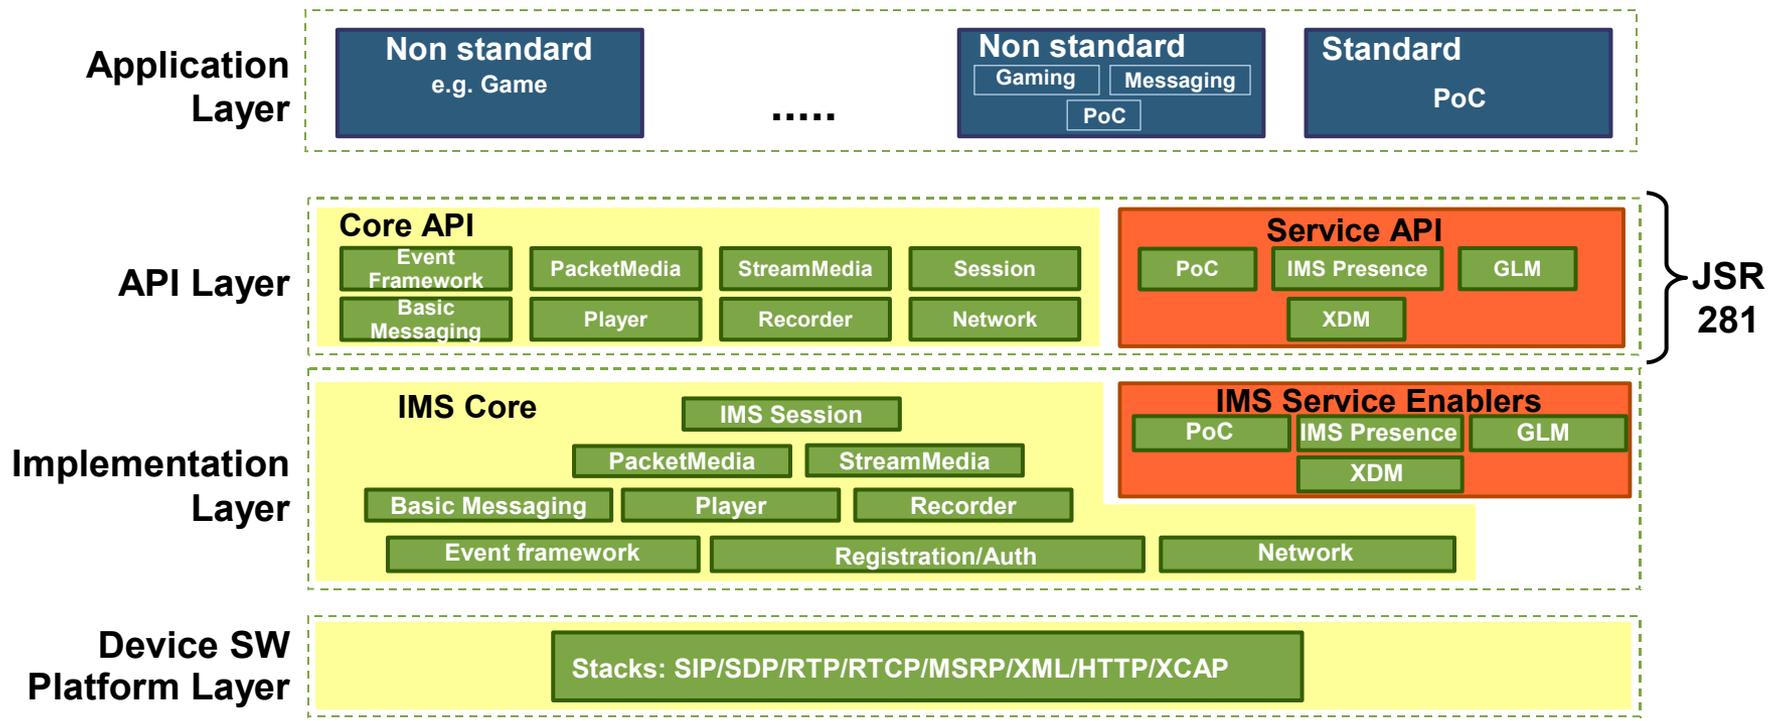

Standardized Way Forward

JSR 281

- API for Client application development for Java ME devices: CDC/CLDC
- Abstracts IMS technology through API
 - Generic IMS API
 - IMS Services API
- Brings standardized IMS Client Service Creation toolbox for Java technology development community
- Lead by:
 - Ericsson (Piotr Kessler and Stefan Svenberg)
 - BenQ (Volker Bauche and Mirko Nauman)

JSR 281 Architectural Concept

Please visit a TS#3319 to see JSR-281 in detail

Agenda

IMS—A Service Enabler

IMS Applications in Devices

JSR 281—Future for Client Development

Developing Services

- Service Development Studio
- E2E Service Creation
- Demo

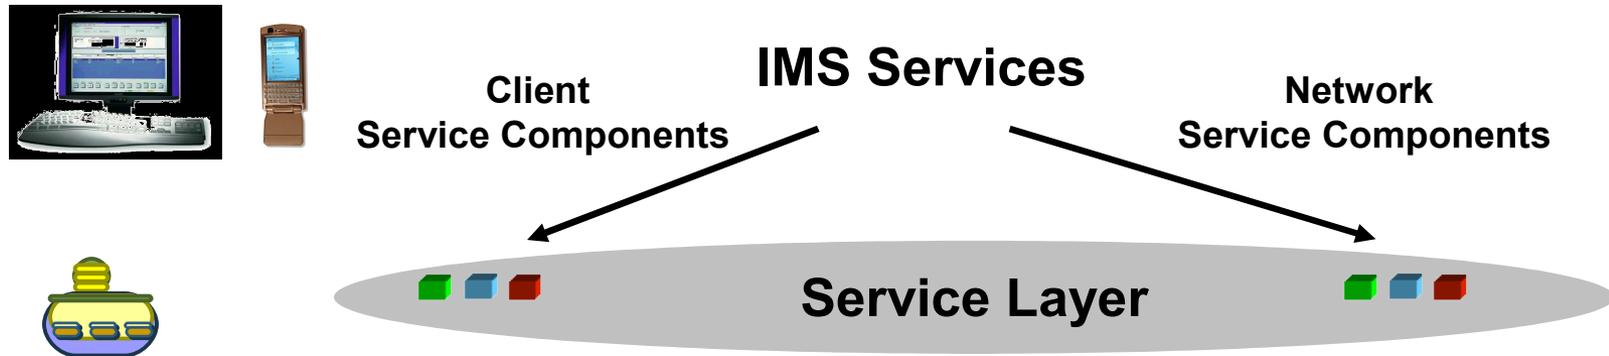

Conclusions

IMS Service Creation Solution

- Eclipse based Service Development Studio
 - Use of existing tools and skills
- Target Developer
 - Internet-savvy developer with Java ME, Java SE and Java EE platform experience
- Server side development
 - SIP Servlet engine with JSR 116 API
- Client side development
 - IMS Client Platform with pre-JSR 281 API for Java ME and Java SE

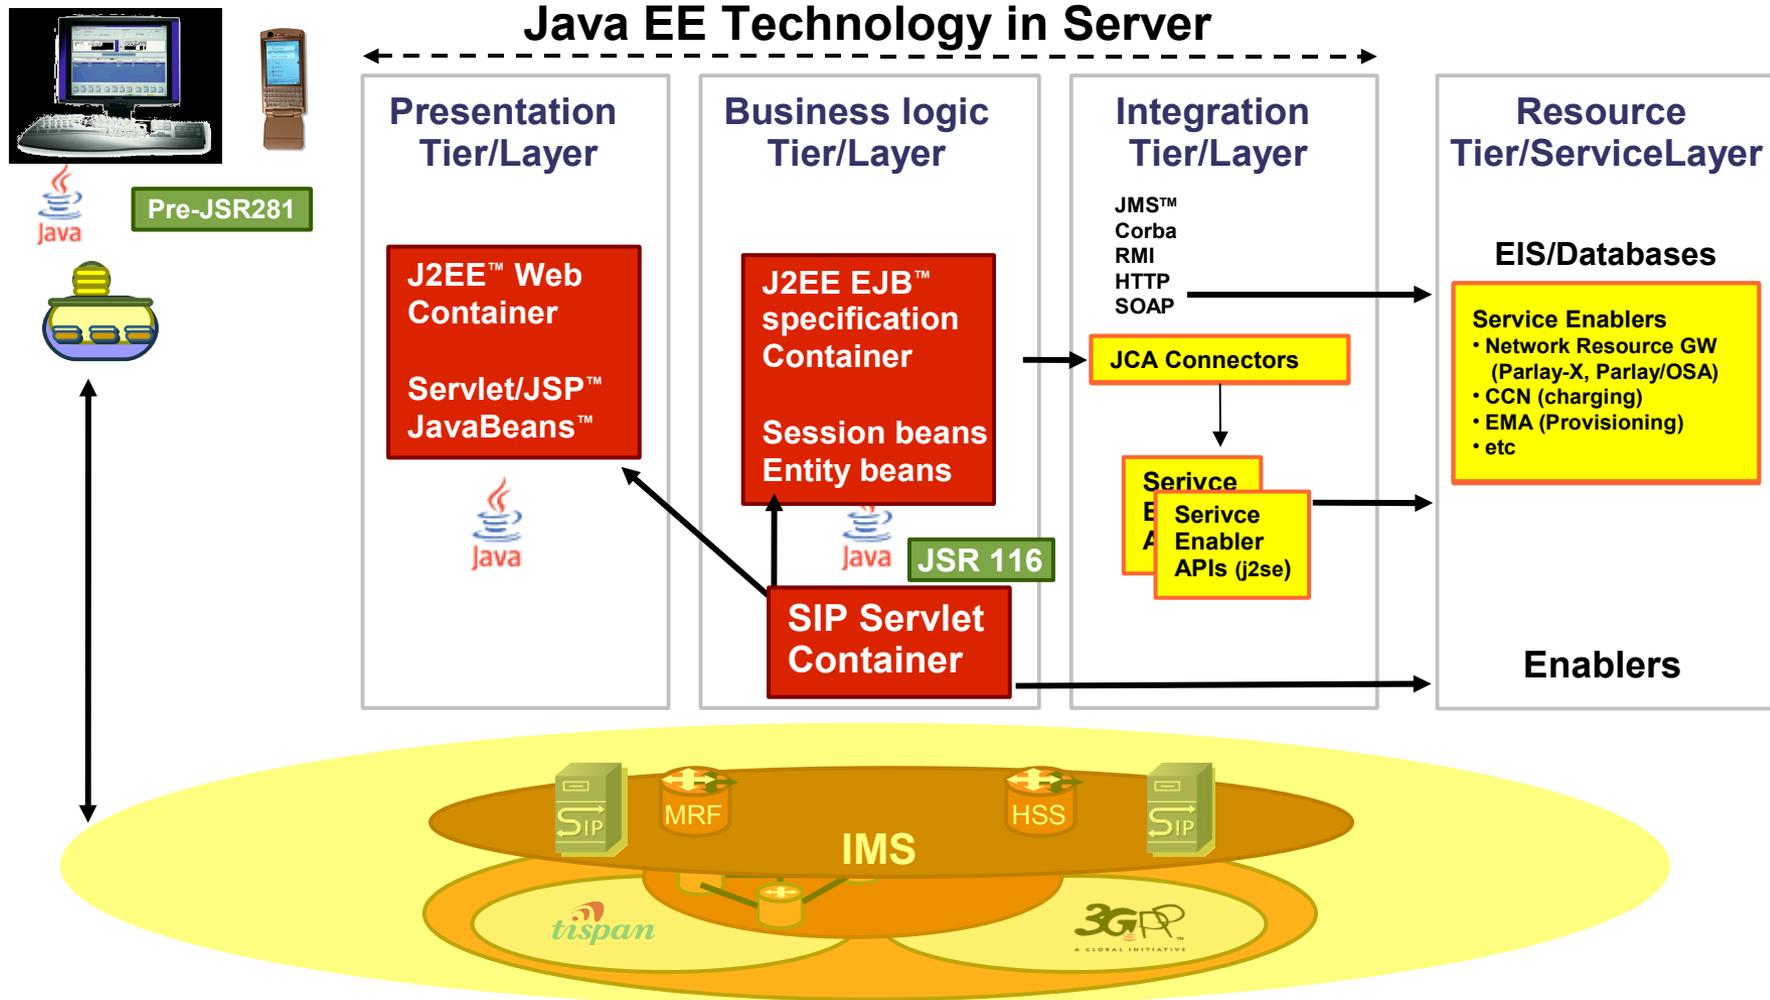

E2E Service Creation

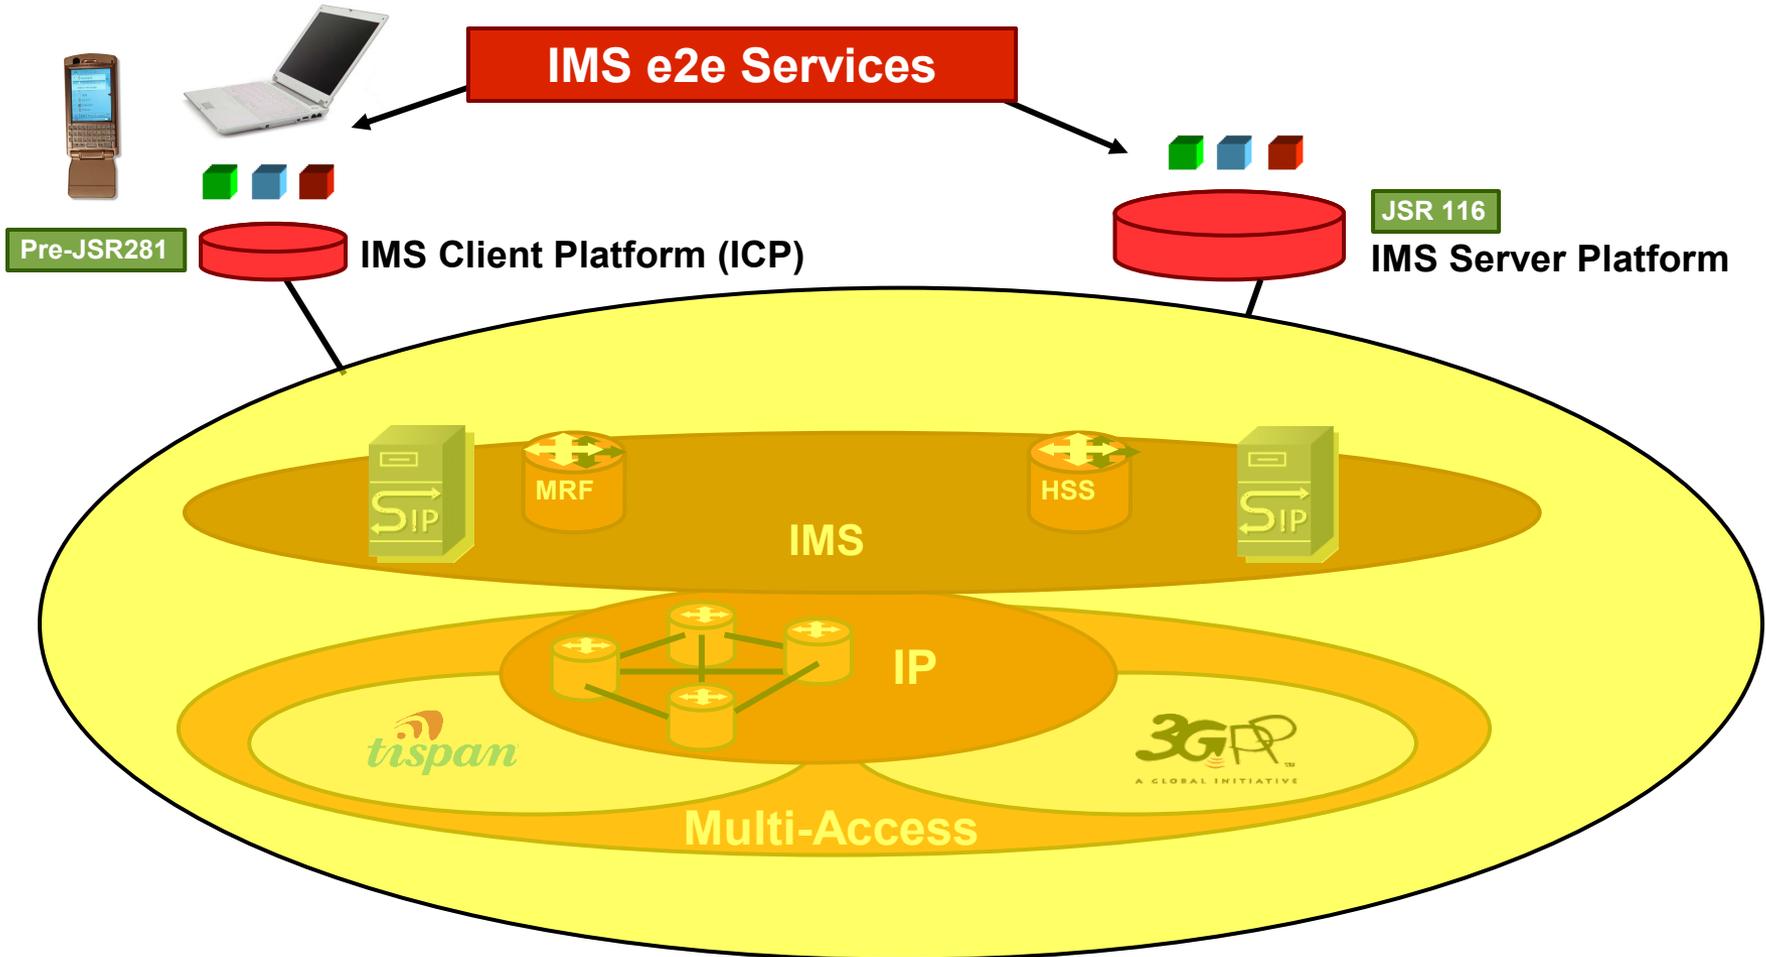

- Initial concerns
 - **TTM**: Efficient development and deployment of e2e services
 - High abstraction level of API
 - Verification on PC without access to real network
 - **IOT**: Interoperable e2e services
 - Standardized interactions secured by the client platform

E2E Java Programming Environment

Abstracted View on IMS Network

DEMO

Step-by-Step Development of a Simple
Service: Sharing Pictures

Summary

- IMS provides framework for pervasive IP multimedia services
- IMS Client Platform enables simple client development
- And secures convergence and interoperability
- JSR-281 brings everything together through standardized Java technology API
