# Enterprise Web Services ARE Real

- Web Services enable enterprise integration scenarios within and across business boundaries
- Web Services are well adopted on both Java<sup>™</sup> and .Net platforms
- Windows Communication Foundation and Project GlassFish<sup>SM</sup> community project make Interoperability a Reality

# Service Composition

# Making Java/.Net Technology-Based Web Services Interoperability Real

## Integrating Consumers

- Data Interoperability

- Binary Data Transfer Using Web Services

## Integrating Businesses

- Secure Reliable Web Services

- Brokered Trust

## Roadmap

- Binary Data Transfer Using Web Services

## Integrating Businesses

- Secure Reliable Web Services

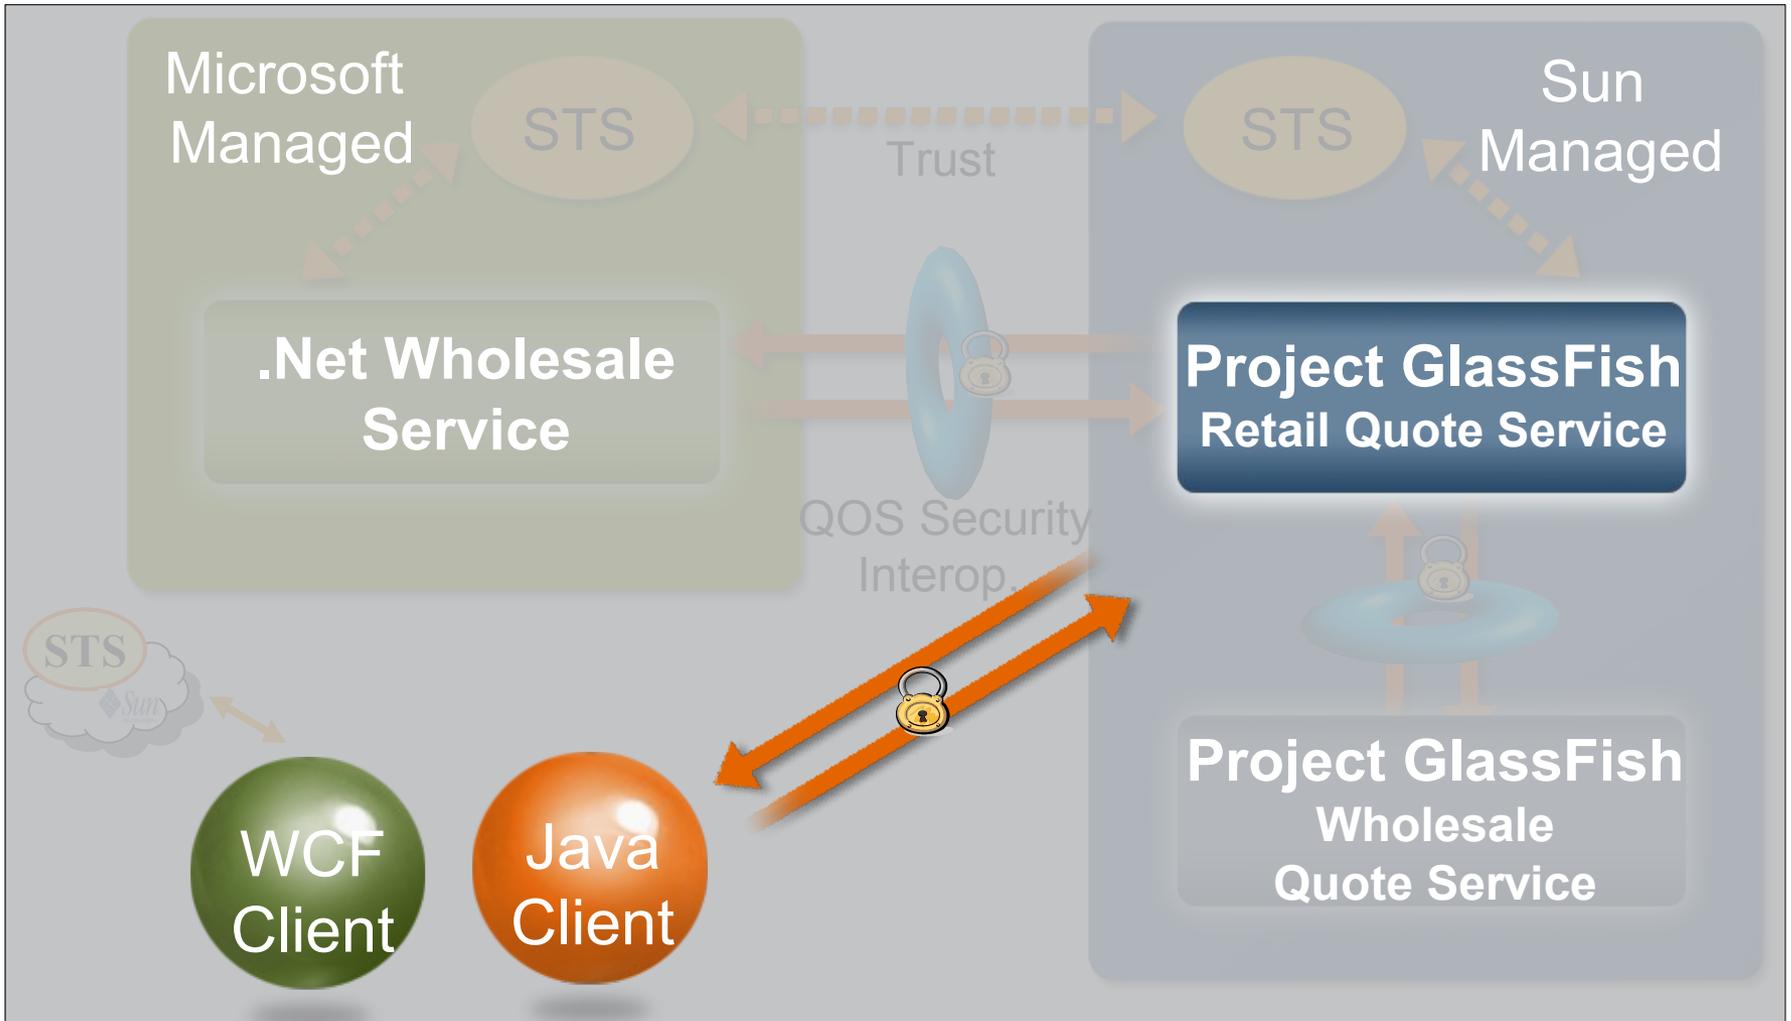

- Brokered Trust

## Roadmap

# Data Interoperability

.NET

Java EE 5

# Practical XML Schema Interoperability

## For Web Services

- **KISS—Keep Interoperable Schemas Simple**
  - Use de-facto profile: xs:sequence, xs:element, wrapped arrays, etc.
  - Use schemas as a data type description, not a validation mechanism

# Practical XML Schema Interoperability

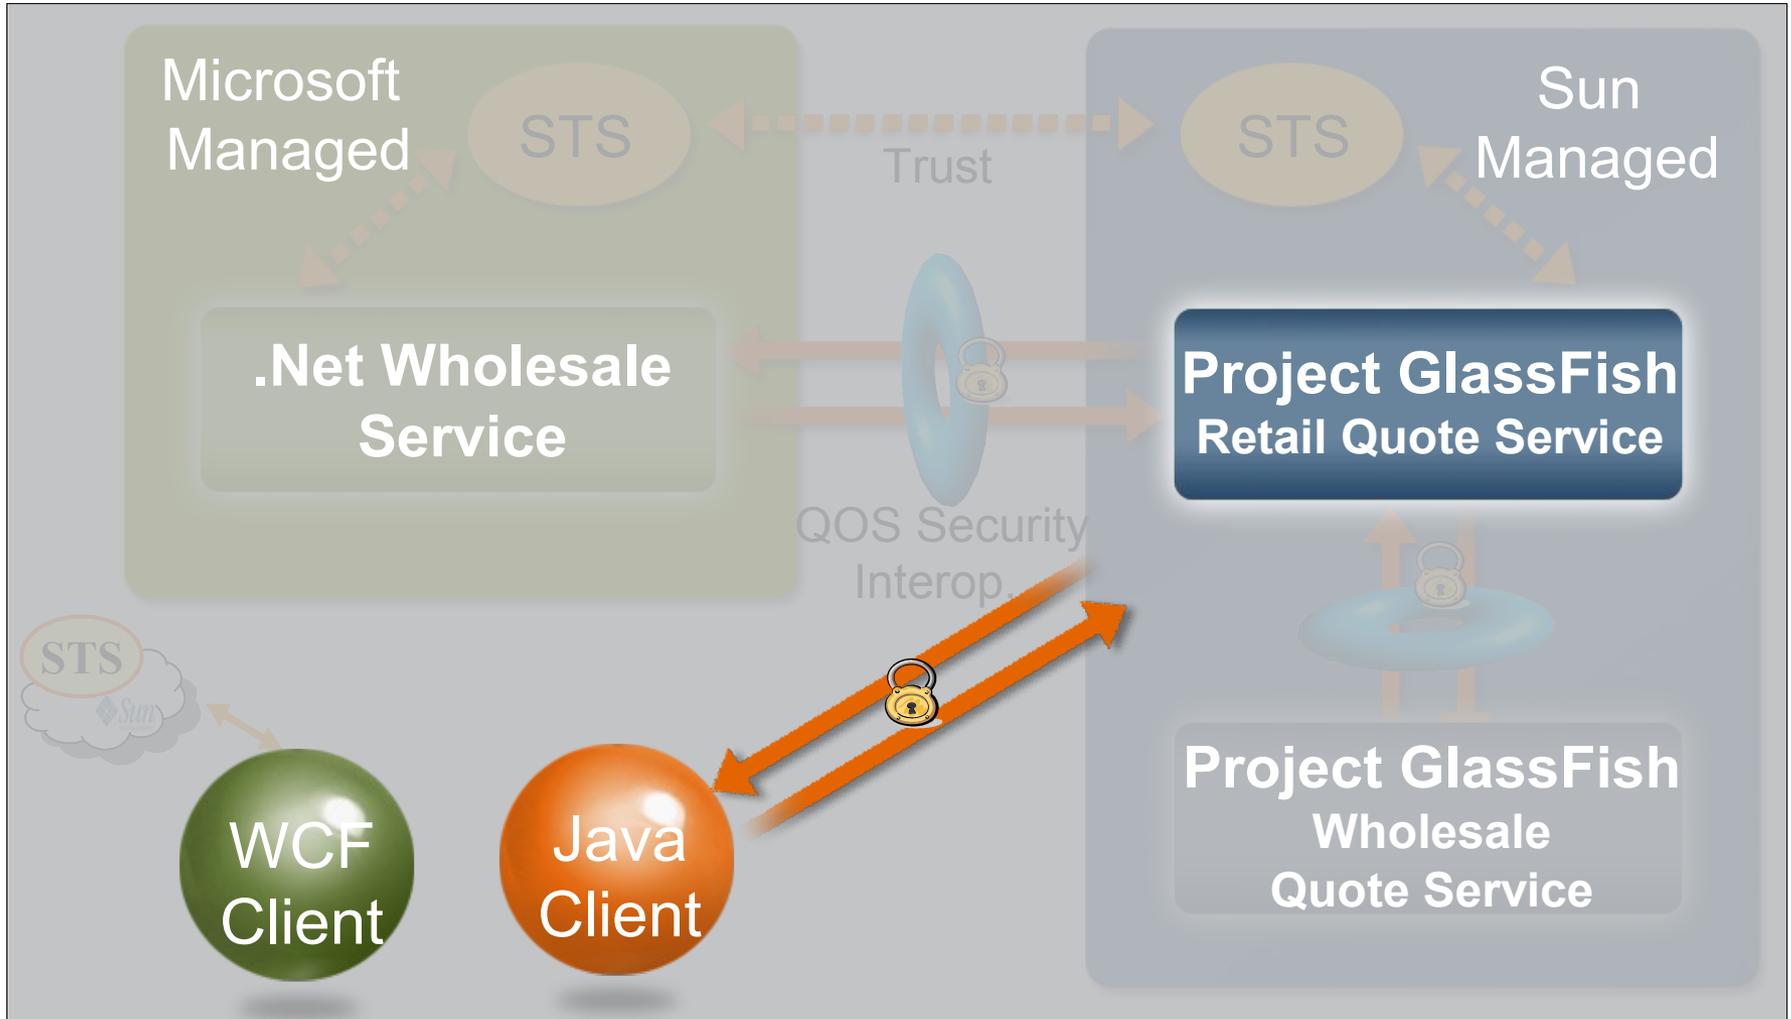

## For Web Services

- **KISS—Keep Interoperable Schemas Simple**
  - Use de-facto profile: `xs:sequence`, `xs:element`, wrapped arrays, etc.
  - Use schemas as a data type description, not a validation mechanism
- **Avoid Complexity Unless Required**
  - Avoid schemas constructs that do not map well to programming languages
  - e.g., substitution groups, `xs:choice`

# Data Interoperability

.NET

Java EE 5

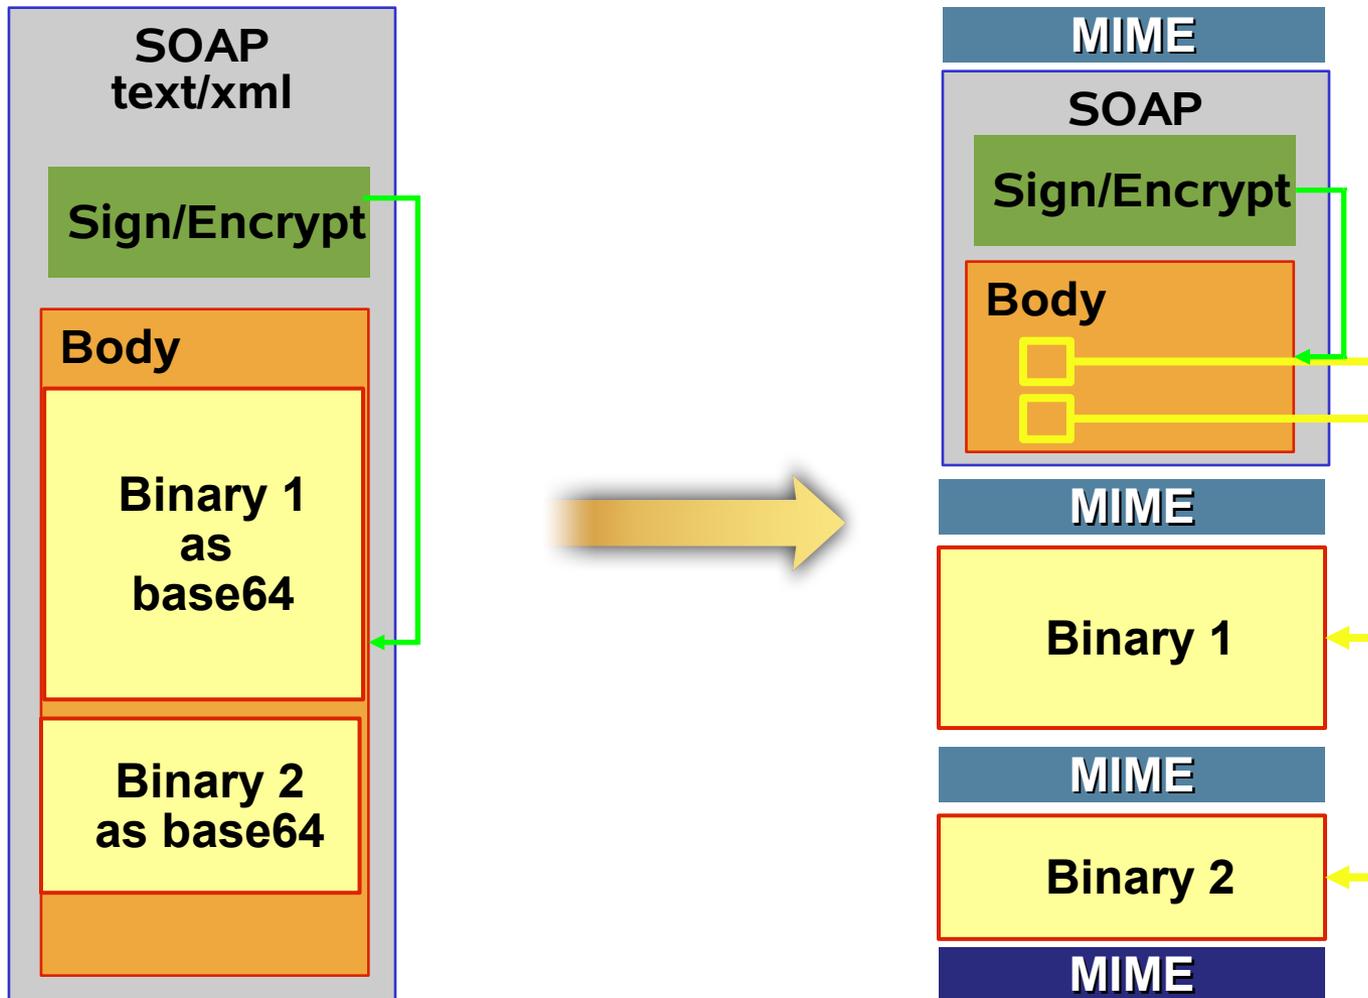

# Binary Attachments

- **xs:base64Binary**
  - Interoperable, but high processing cost
  - 30% extra message size
- **SwA (SOAP with Attachments)**
  - Low interoperability, attachments outside SOAP Body
  - Lack of Composition with other Web Services Protocols
- **DIME (Direct Internet Message Encapsulation)**
  - Low interoperability, attachments outside SOAP Body
  - Lack of Composition with other Web Services Protocols

## Roadmap

# Windows Vista Web Services

## Windows Communication Foundation (“WCF”)

Runtime for building distributed applications

## “InfoCards”

Visualized user’s digital identity

## Active Directory Federation Services

Infrastructure for identity and access

## Windows Remote Management

Interoperable system management

## Web Services For Devices

Web Services-based devices interaction

End-Users  
“InfoCard”

Developers  
“Indigo”

Active Directory  
IT Organizations

# Technology and Product Delivery Plans

## Visible development

WSIT Early Access

NetBeans™ 5.5 IDE  
Plugin Early Access

Project GlassFish

## FCS Quality

Sun Java System  
App. Server 9.1

NetBeans IDE  
Plugin

Java  
ES 6.0

Now

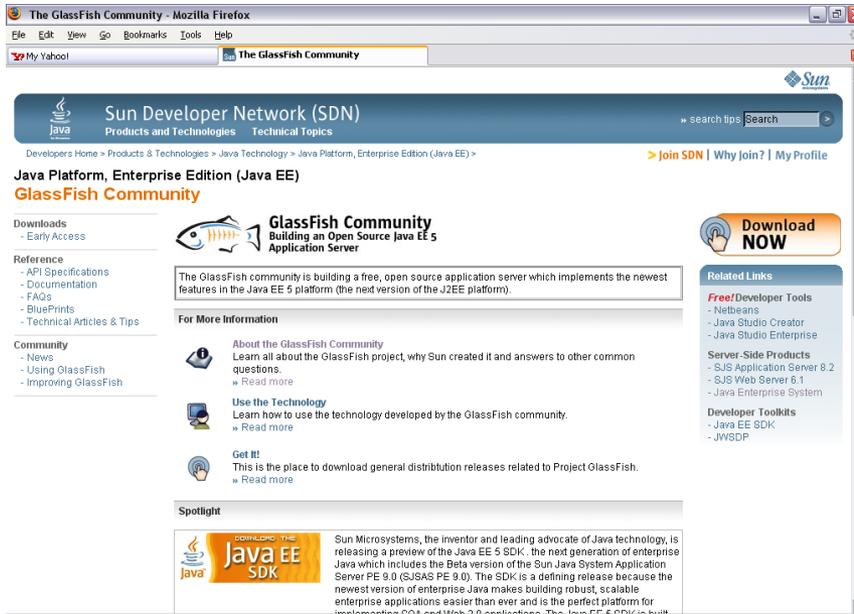

2007

# Enterprise Web Services ARE Real

## Summary

- Web Services enable enterprise integration scenarios within and across business boundaries
- Web Services are well adopted on both Java and .Net platforms
- Windows Communication Foundation and Project GlassFish community project can be used TODAY to achieve interoperability

# Project GlassFish Community Project

**Building a Java EE 5  
open source application server**  
[java.sun.com/javaee/GlassFish](http://java.sun.com/javaee/GlassFish)

Source: Sun 2/06—See website for latest stats

Simplifying Java application development  
with **Java EE 5 technologies**

Includes Java WSDP, EJB™ 3.0,  
JavaServer™ Faces 1.2, JAX-WS, and  
JAXB 2.0

Supports > **20** frameworks and apps

**Open source** CDDL license

Basis for the **Sun Java System  
Application Server PE 9**

**Free** to download and **free** to deploy

Over **1,200** members and **200,000**  
downloads
