What I’m Doing With The Fish

- I’m using GlassFish as platform for my client projects and my opensource adventures (lightfish, connectorZ, x-ray, book examples).
- Used Versions: GlassFish v2.1, v3.01 and if I have the power: 3.1.2.2
- Fast, robust server. Excellent monitoring capabilities.

What Worked

- Favorites:
  - Good Documentation
  - Accessible source code
  - Resources (blogs, books) available in web
  - REST, Web, CLI administration and monitoring facilities
  - Easy to convince customers
  - Good adoption
  - Easy installation
  - Great NetBeans integration

How GlassFish Can Be Better

- How can the overall GlassFish product be improved?
  - Consistently working monitoring
  - Source code availability as tarball / zip
  - GIT repository / github
- Any particular features you are interested in seeing in the product?
  - Virtualization
  - Configurable @Asynchronous pools
  - Java API for asadmin (for scriptable deployment)
  - Nicer VisualVM integration
