Mind reading...

Scott Jenson, Google

Moravec's paradox

„It is comparatively easy to make computers exhibit adult level performance on intelligence tests or playing checkers, and difficult or impossible to give them the skills of a one-year-old when it comes to perception“

★★★★☆ **Another frustrating gadget I wish I did not buy**

By Amazon Shopper on Mar 28, 2012

I was very excited about the
frequently travel in winter
temperature remotely via

Most stats that can do the
can do without.

Like others mentioned

all top notch and puts other

it ends. At least for me. Before you

**The auto-programming is ineffective.
Over many months of using my Nest, it
started getting less and less smart.**

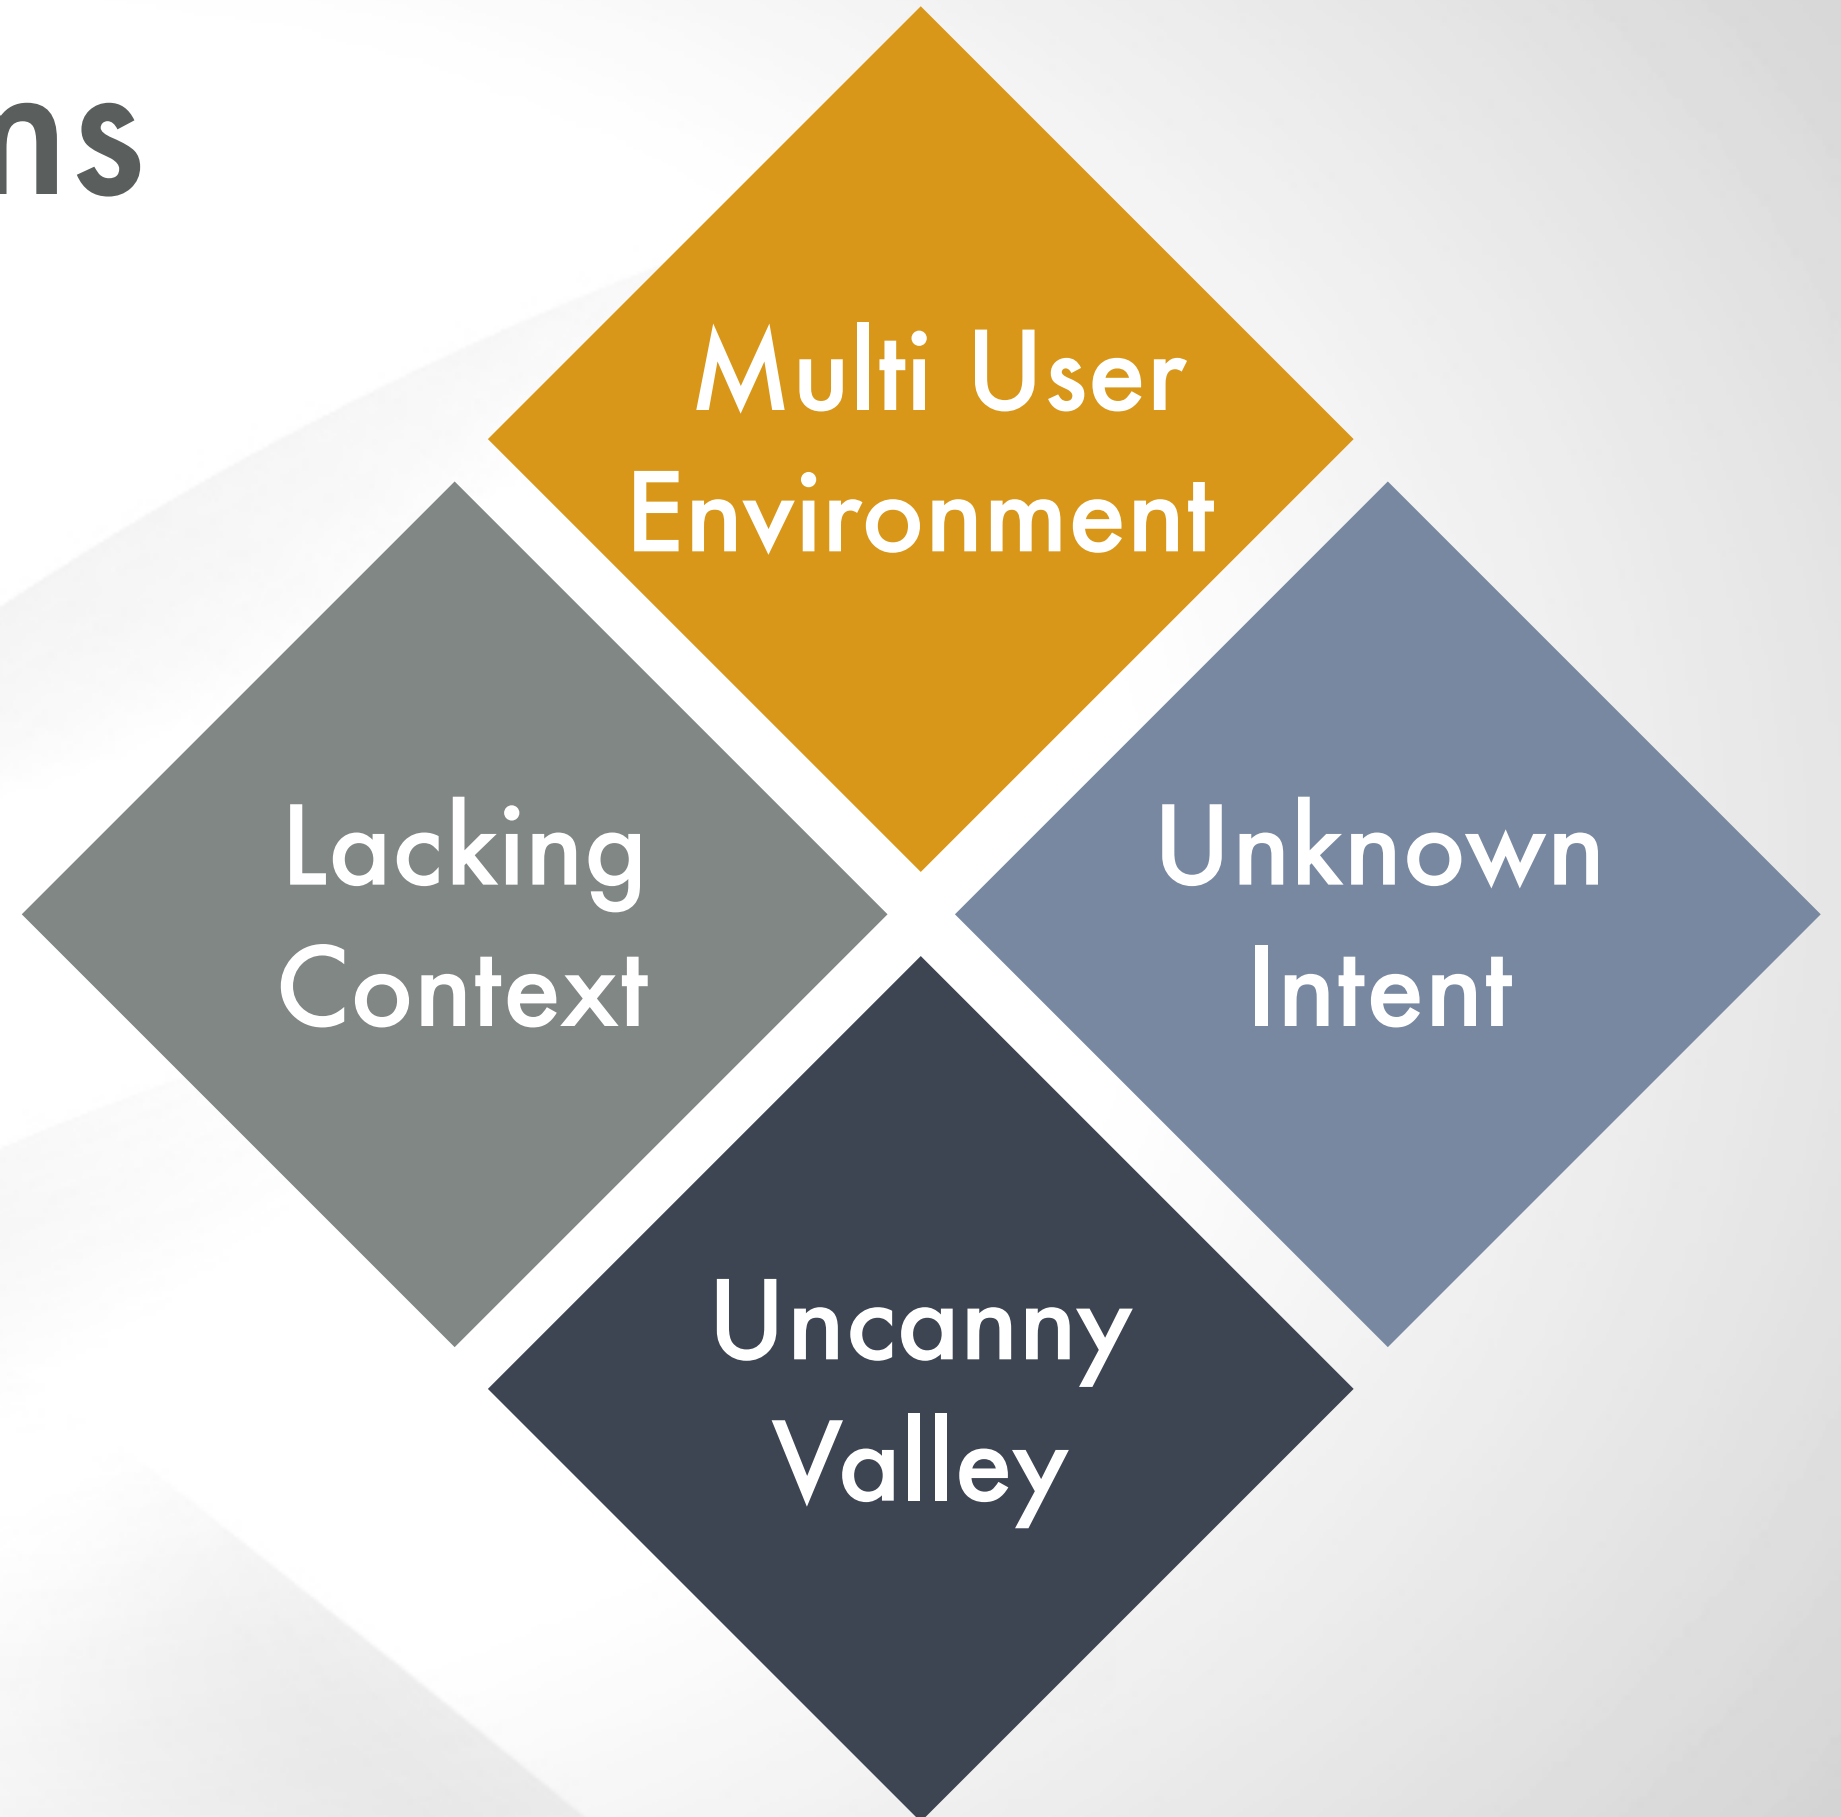

**The learning system fails to
understand user intent**

„ It makes assumptions, and I don't like the
assumptions, and I can't train it to make different
assumptions. I feel like I've lost control over it.“

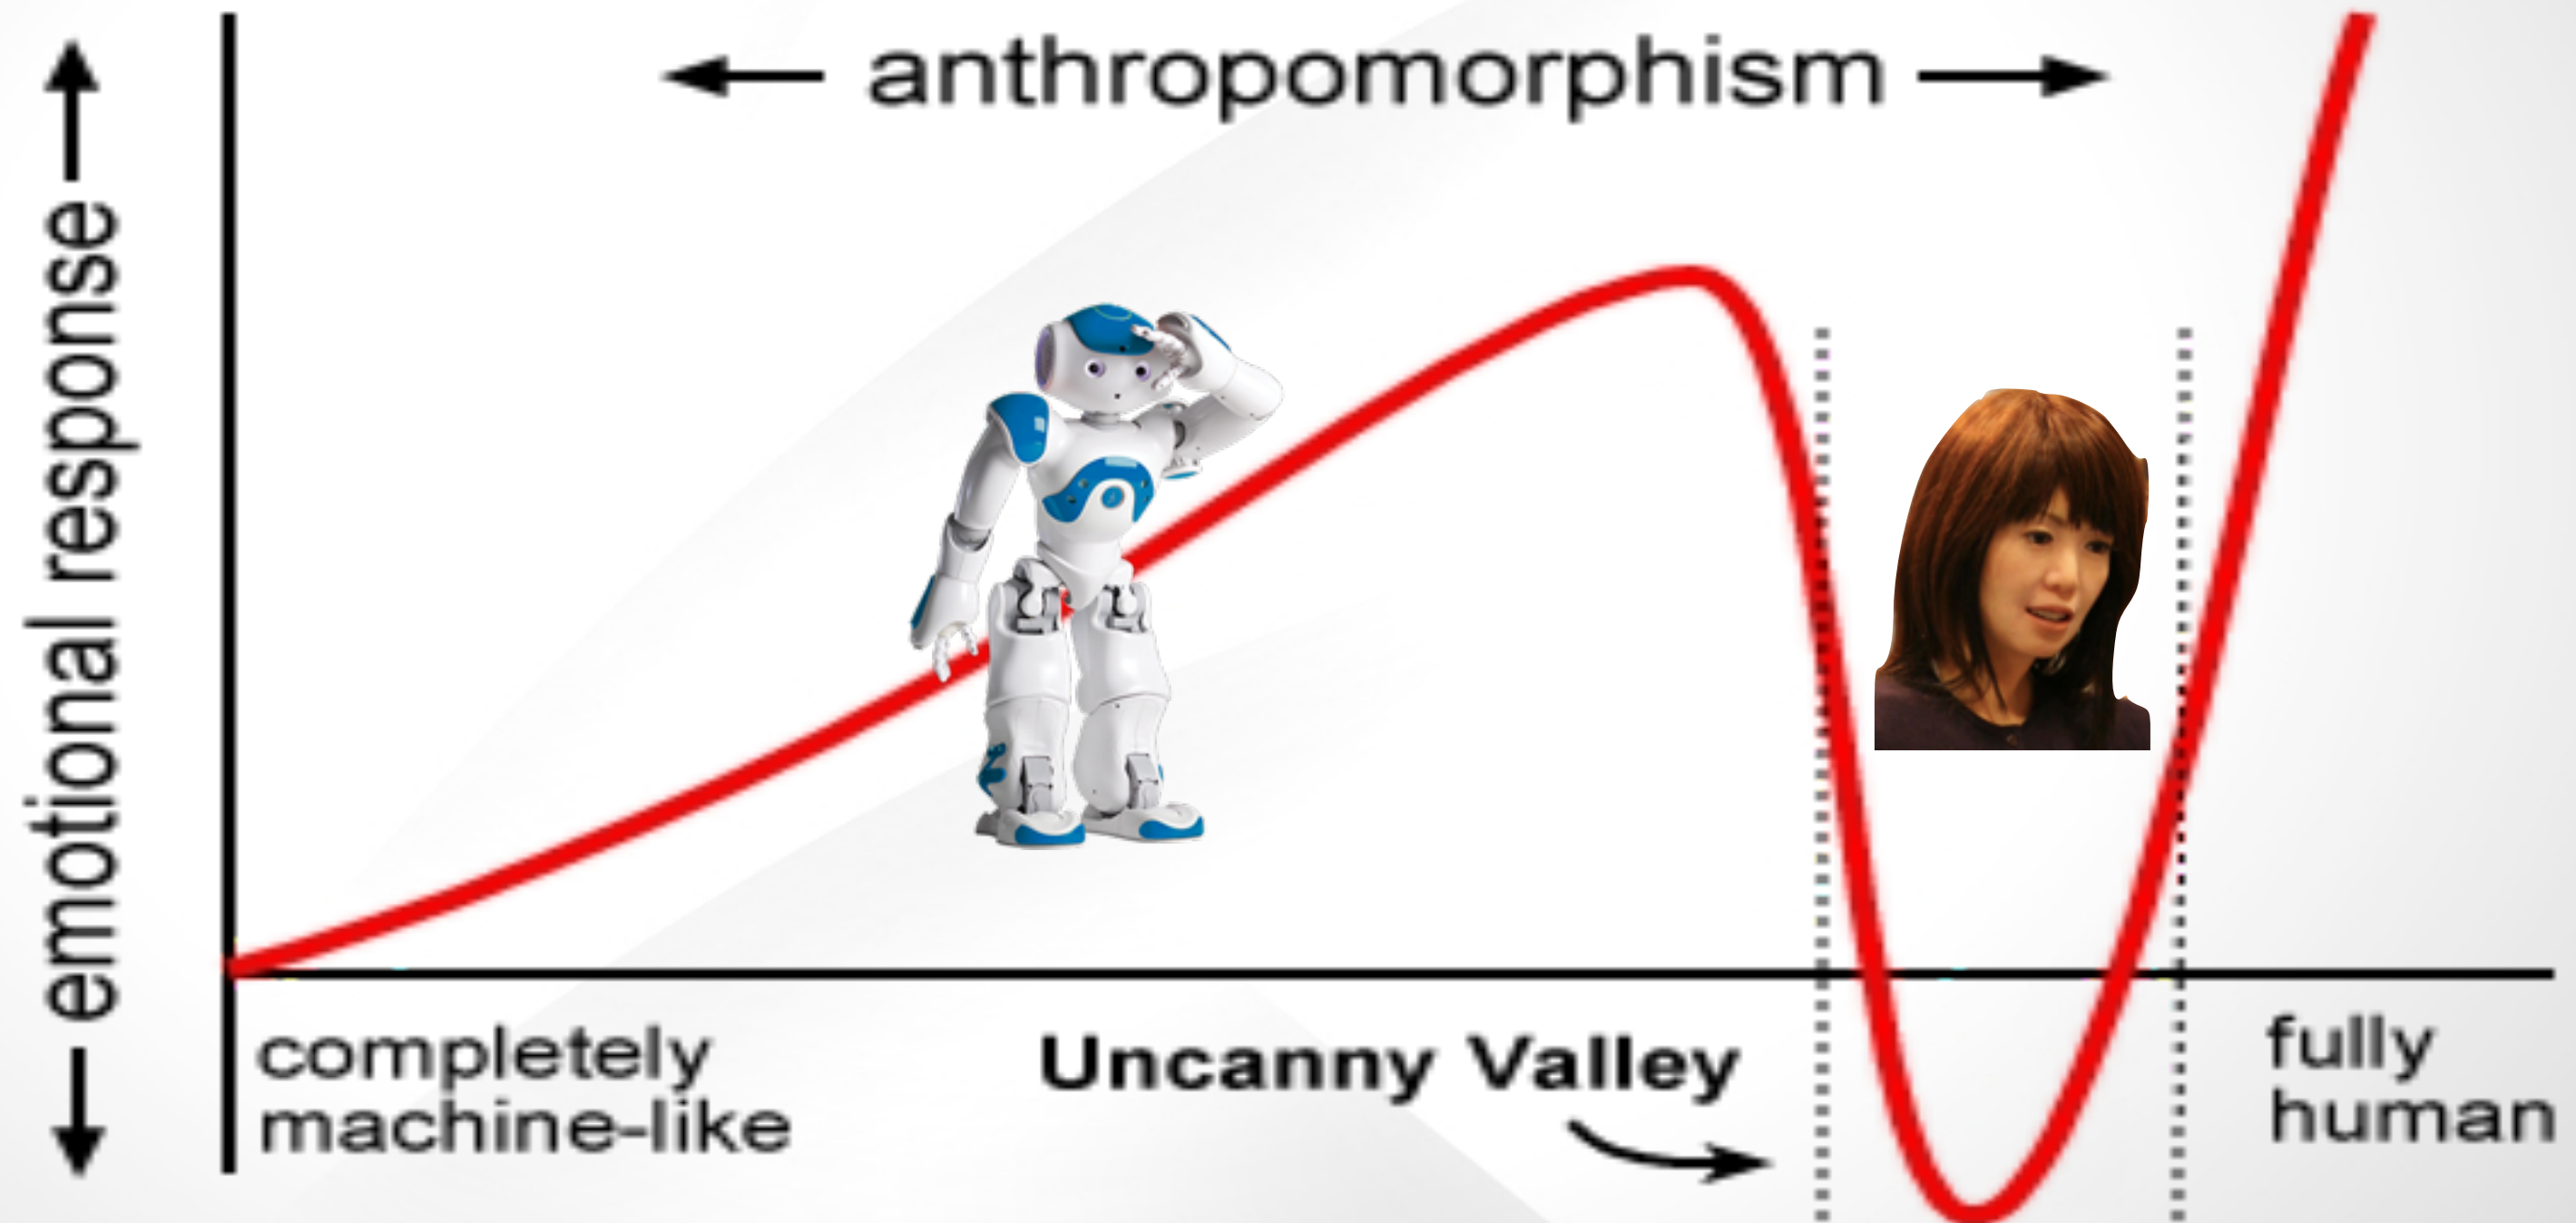

**Eventually, I disabled the learning and
just program it manually because it is
much faster and more predictable and
gives me no surprises**

**Once several participants realized the
Nest's machine learning limitations,
they changed the way they interacted
with it.**
