Command-Line Monitoring on the JVM

Colin Jones

@trptcolin

8th Light

8th Light

What to expect

command-line
tooling

on the JVM

introspection &
serviceability

--all-flags=false

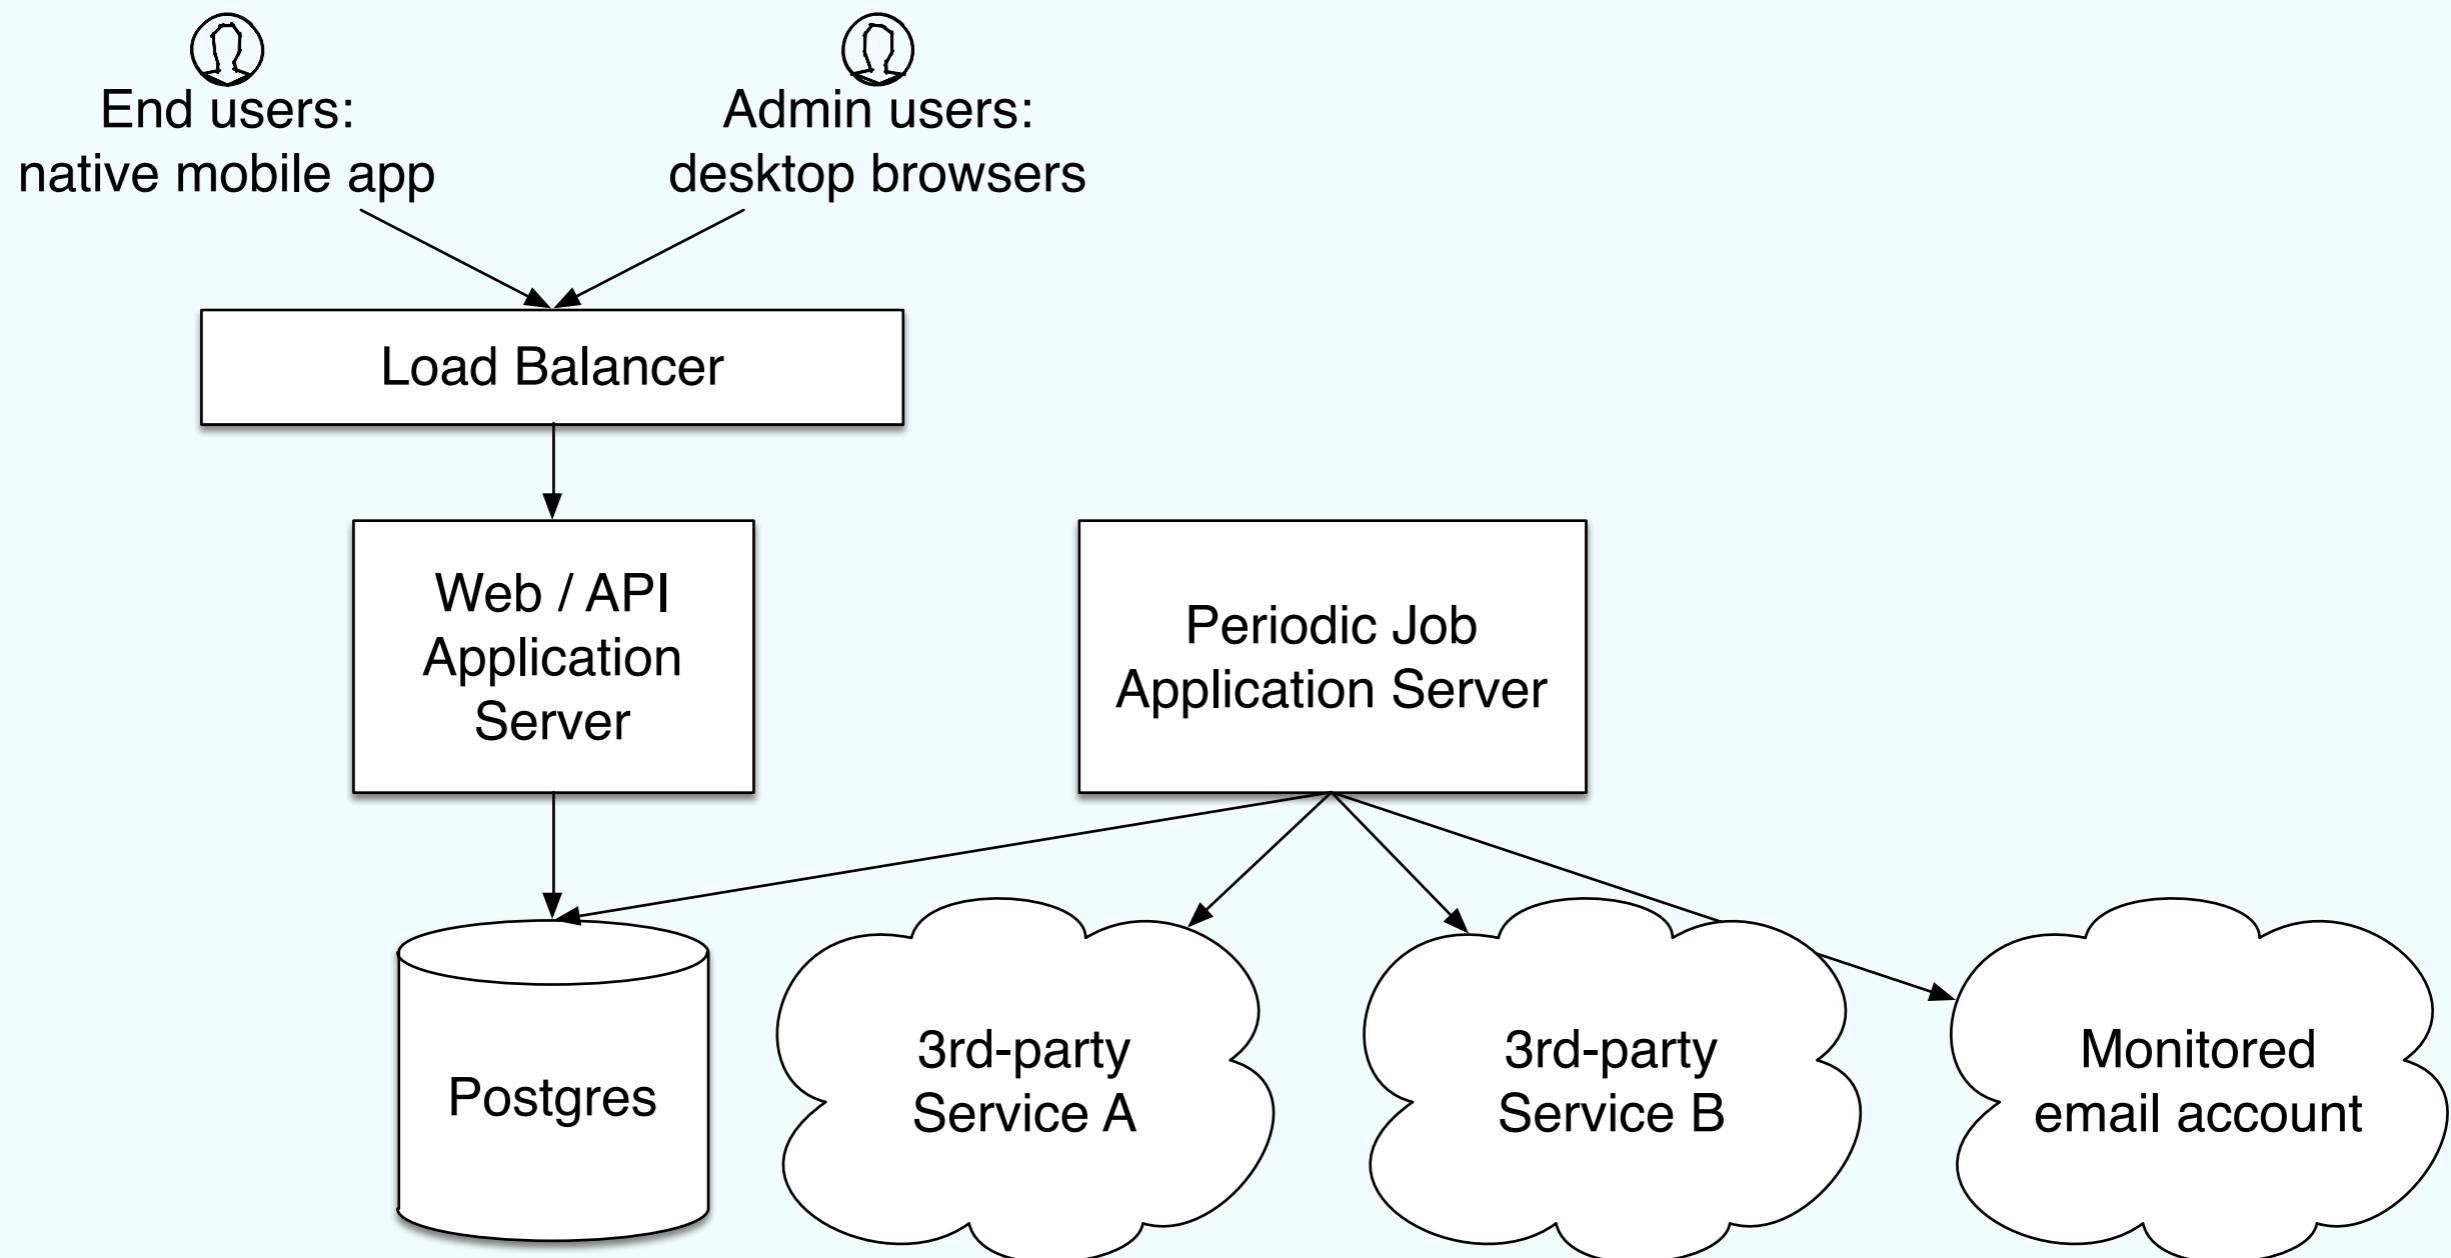

war stories

real-life usage
(well, re-enacted anyway)

A long time ago in a
software shop far, far away...

Things are going
pretty well 😊

What does this thing look like?

But strange things
are afoot 

the server sometimes
gets really slow

the team has to manually
restart the application
server

incident response time
is \sim 5 minutes

Yes, strange things
are afoot

Pain, frustration, anger

Following

Seriously, the JVM is slow, bloated, and in my experience has never worked well or reliably in production, so can we please stop.

12:21 PM - 25 Nov 2014

...

Just the facts

Just the facts

Michigan's water crisis is a national disgrace. The Flint water crisis is the most recent in a long line of environmental disasters. Flint residents are still suffering from the effects of the water crisis, which has left many people sick and unable to afford basic necessities. The water crisis has also had a significant impact on the local economy, as many businesses have moved out of the area. The Flint water crisis is a reminder that we must take action to protect our environment and ensure that everyone has access to clean, safe water.

References

Flint water crisis

sometimes,
things get slow

all requests seem
to be affected

the JVM stays up

restart the JVM and
everything is fine

What could it be?

Demo

More facts, please!

constant full GCs

what's in the
heap

what application
code was running

The right tools for the job

vmstat

system-level:

CPU, memory, disk, context switching

top

per-process:

CPU & memory

jps

what's our PID?

jstack

status of all threads (**right now-ish!**)

jcmd

what **can't** it do?!

jcmd [PID] help

(sorry, JVM 6 users: see jinfo/jmap/jstack)

jstat

GC

classloader

compiler

Mystery solved! 🙌

Now “just” fix it

idea 1:
eliminate the leak

idea 2:
eliminate the cache
altogether?

idea 3:
delete the feature

idea 4:
full-text search engine

So we're good now... 😎
until the next incident

Lessons

“it’s slow” could
mean lots of things

“high CPU” could
mean lots of things

collecting data is
crucial in a crisis

reproducing the issue
helps me sleep at night

Other “right tools for the job”

Heap analyzers

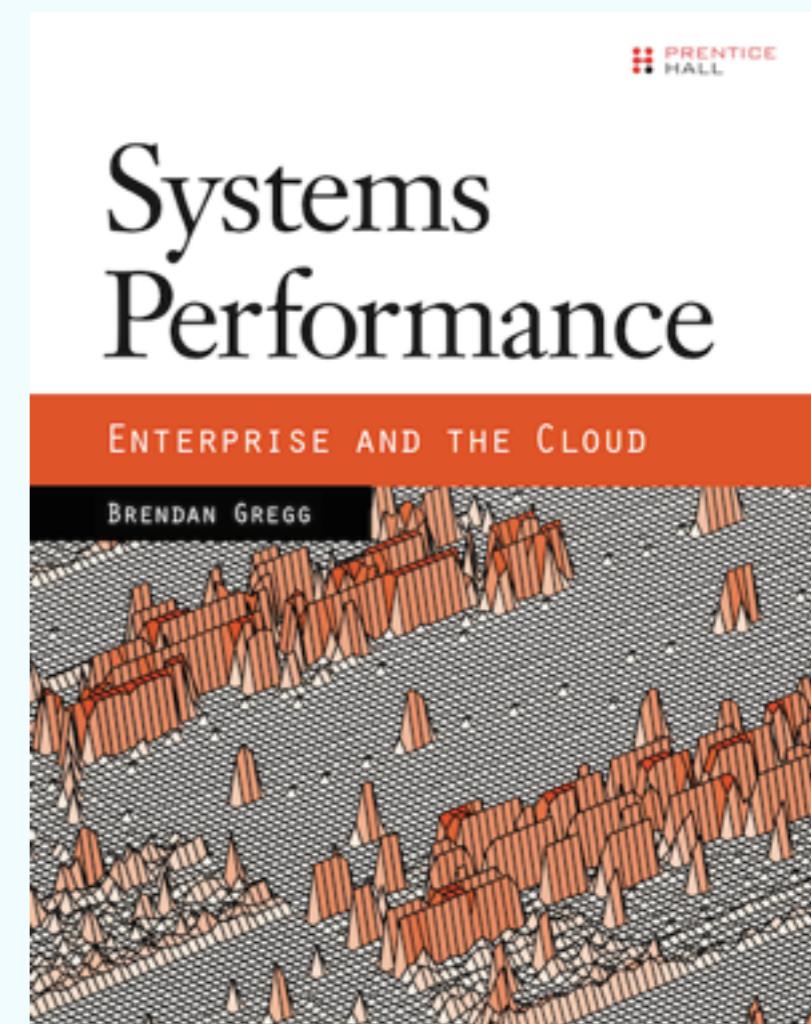

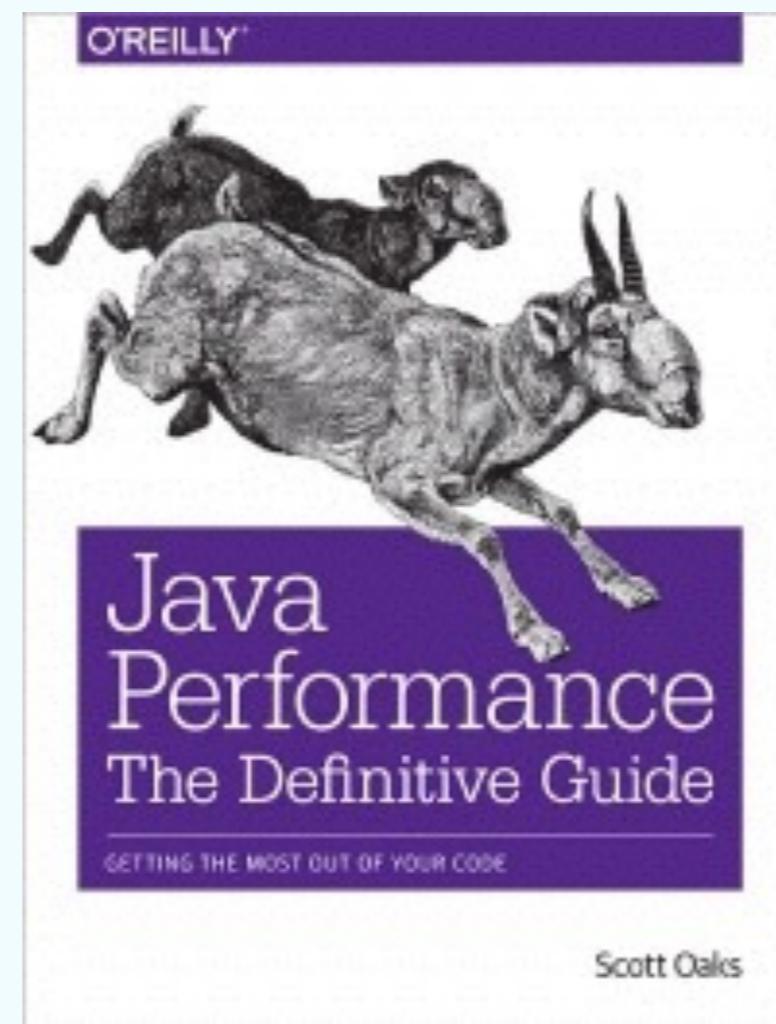

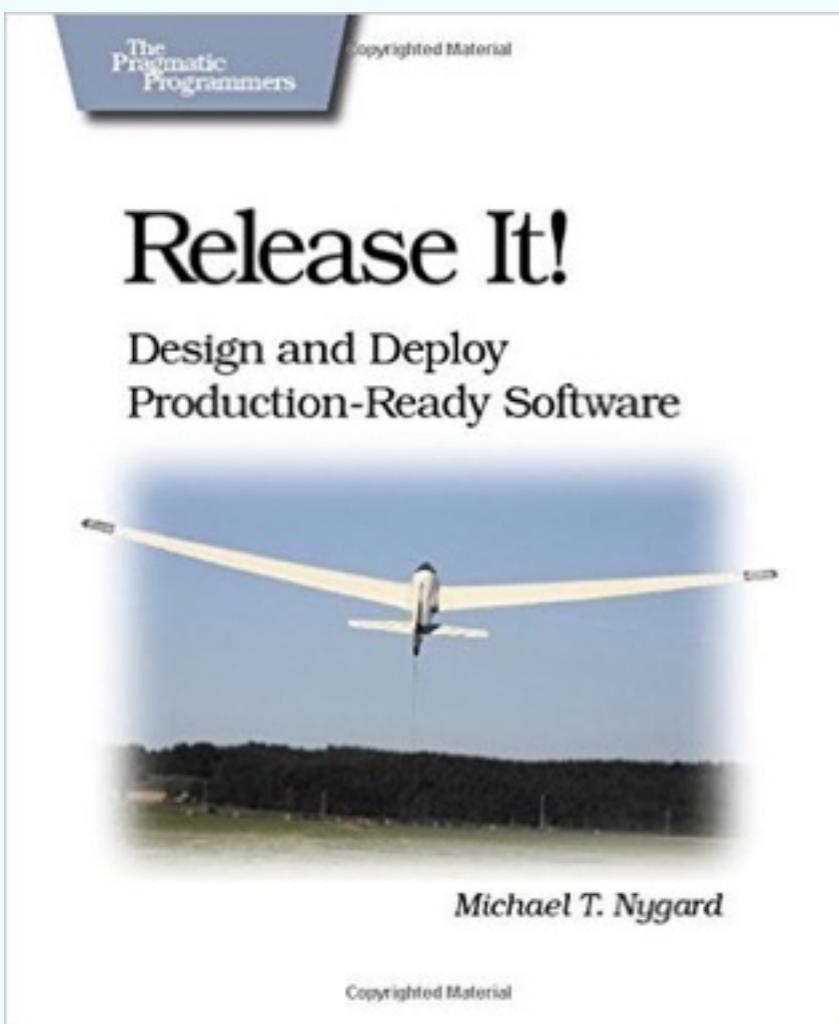

Profilers

Constant monitoring
& alerting

Dynamic tracing

Learning
more

Books

operators are standing by!

man jstat

man jstack

jcmd [PID] help [COMMAND]

etc.

Thank you!
