Who are we?

- Manik Surtani
 - Founder and project lead, Infinispan
 - Project lead, JBoss Cache
 - Frequent speaker on cloud computing, cloud data stores
- Galder Zamarreño
 - R&D engineer on Infinispan and JBoss Cache

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

The wide world of Infinispan

- Categorize major Infinispan uses
- Discuss each one
 - Benefits
 - Typical usage
 - Tuning tricks and tradeoffs

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Infinispan as a ...

- ... local, in-memory object cache
- ... clustering/high availability toolkit
- ... clustered in-memory cache
- ... in-memory data grid
- ... cloud-ready data store

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Local, in-memory object cache

- Performance booster
- Good for data that is:
 - Hard to calculate
 - Expensive to retrieve
 - E.g., from a DB or a Web Service
 - Frequently accessed

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Local, in-memory object cache

- Better than a HashMap
 - Greater concurrency
 - Built-in eviction, prevents OOMs!
 - Overflow to disk
 - Warm starts, preloading
 - Events, notifications
 - Highly configurable locking strategies
 - JTA compatible
 - JMX monitoring

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Local, in-memory object cache

- Plugs in to various frameworks to boost performance
 - Hibernate/JPA
 - SEAM
 - Cache JSF fragments
 - Wicket
 - Apache Camel, ESBs
 - ... etc ...

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Tips and Tricks

- Make use of eviction
 - Low-cost, bounded container
 - Recency-based eviction: LIRS
- Tune for read-heavy
 - Use lock-striping, minimize lock pool
 - READ_COMMITTED is good enough for most
- Preloading can be expensive
 - Slow startup
 - Is it really needed? Is lazy population good enough?

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Clustering toolkit

- Helps cluster your framework
- Helps you add the following features:
 - High Availability
 - Failover
 - Scale-out

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Clustering toolkit

- E.g., clustering EJB and Servlet containers
 - JBoss AS, others
- SIP session state
 - Mobicents
- Lucene directory
- ModeShape, JCR
- Plenty of custom frameworks, servers
 - MMORPG servers
 - Financial trading systems

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Tips and Tricks

- Strive for session affinity
 - A very valid optimization
 - Will allow for async comms
- Replicated mode vs distribution?
 - Depends on cluster size
- Distribution: co-locate related state
- Preloading, state transfer not necessary, use a `ClusterCacheLoader`

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Clustered in-memory cache

- Performance booster
- Similar to a local cache
- Cluster-aware
- More shared-cache space!

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Clustered in-memory cache

- Just as an in-memory cache:
 - Cache data that is costly to:
 - Calculate (e.g., deserialize)
 - Retrieve (e.g., RDBMS, Web Svc)
- Hibernate/JPA
 - cluster-aware 2nd-level cache
- Apache Camel, ESBs

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Cache.putForExternalRead()

<code>put()</code>	<code>putForExternalRead()</code>
Use for updating state	Use to cache state read from external source
Regular lock acquisition timeout	Fail-fast
Could throw an exception	Fails quietly
Could cause existing transaction to fail	Will never affect existing transactions

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Tips and Tricks

- Similar to an in-memory cache
- `putForExternalRead()` API
- Use invalidation clustered mode
 - Very efficient: only keys on wire
 - async comms help even further
- Replication can be used as well
 - if the cluster size is small
 - the data cached is small
 - overall data volume can be contained in a single node

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

In-memory data grid

- Alternate data store
- Not just a cache
 - An authoritative data sink
- Highly scalable, low latency
- Accessed in a P2P or client/server manner

“Memory is the new disk, disk is the new tape!”

- Tim Bray

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

In-memory data grid

- Multiple access mechanisms
 - Embedded: P2P
 - Client/Server
 - REST
 - Memcached
 - HotRod
- Familiar APIs
 - Cache API, upcoming JPA-like API
- Queryability

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

In-memory data grid

- Four major characteristics
 - **Fast**
 - In-memory, low latency
 - high concurrency
 - **Available**
 - Inherent redundancy
 - **Distributed**
 - Data locality
 - **Elastic**
 - Scalable. Out and back in again.

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

In-memory data grid

- Used in HPC environments
 - Latency is key
 - High performance web
 - Consumer-facing systems
- Massive compute grids
 - Distributing computation needs distributed data
 - Financial systems, risk engines, arbitrage systems
 - Scientific use

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Tips and Tricks

- Session affinity still a nice to have
- Async comms and eventual consistency
- Use distributed mode
 - Replicated will work to a limit
- Tune performance vs durability
 - numOwners
- Dedicated data tier helps you build stateless, elastic app tier
- HotRod: most efficient endpoint. Smart clients.

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Cloud-ready data store

- RDBMS in clouds suck
 - Ephemeral cloud nodes
 - Inelastic
 - single point of failure
- Data grids a much better solution
 - Deals with transience
 - Elastic, scalable
 - Distributed

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Cloud-ready data store

- Google App Engine
 - BigTable
- Amazon SimpleDB
 - Dynamo
- Facebook
 - Cassandra
- etc.

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Cloud-ready data store

- Like Data Grids, API is key
 - Cache API
 - JPA-like API
 - REST
 - HotRod
- Dedicated data grid tier in the cloud
 - Allows for scalable, stateless app tier

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Tips and Tricks

- Same as with Data Grids
- Multiple endpoints: a variety of clients
 - REST
 - Fronted by a load balancer
 - HotRod
 - Built-in load balancing
- Use a transport that doesn't rely on Multicast
 - Not supported by some cloud infrastructure

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

To sum it up...

- Infinispan can be used in a variety of ways
 - From a simple in-memory cache
 - ... to a cloud-ready data store
- To increase performance
- ... or to provide high availability, elasticity
