# JBoss Enterprise Application Platform 6

Early Access

# JBoss EAP 6 – 50,000ft view

- Most ambitious JBoss release ever
  - Major EE platform release (Java EE 6)
  - Significant OA&M changes
  - Documentation
  - Performance

**Deliver substantially better value over the full application lifecycle**

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Java EE 6 – recap

- **Lighter**

- Profiles, Pruning – JSR-77 & 88, EJB2, JAXR, JAX-RPC
- Embedding – testing, batch

- **Better Integrated**

- Managed Beans
- CDI 1.0 - Unifies JSF, JPA, and EJB3
- Bean Validation

- **Richer APIs**

- JPA 2.0, EJB 3.1, JAX-RS 1.1
- JSF 2.0 / Servlet 3.0

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Java EE 6 – recap

- Simple POJO based programming
- Annotations instead of XML config. files
- Robust – 10 years old
- Standard – vendor and license choice

```
@Path("/library")
public class Library {
    @GET
    @Path("/books")
    public String getBooks() {...}

    @GET
    @Path("/book/{isbn}")
    public String getBook(@PathParam("isbn") String id) {}
}
```

```
GET http://localhost/services/library/books
GET http://localhost/services/library/book/0120790629
DELETE http://localhost/services/library/book/0120790629
```

# EAP 6 Administrative Domain Model

- Domain
- DomainController
- Server
- ServerManager
- ServerGroup
- Cluster

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

# Key Management Goals

- Stable, Remote Management API :
  - CLI, HTTP, Java API, Console
- Atomic multi-step operations
  - Across servers
  - With roll-back
- Config file simplification :
  - domain.xml – domain-wide configs
  - host.xml – server specific attributes / overrides

# Other OA&M Improvements

- True Modularity – JBoss Modules
  - Module definitions (public, private, deprecated, etc.)
  - Class-loader isolation
  - Extensible – eg. OSGi, Java SE 7
- User oriented configuration
  - Separation of config. from binaries and internal wiring
  - Radical simplification and harmonization
- Simplified port management
- IPv6 and mixed IPv4 / IPv6 support

**SUMMIT**

JBoss  
WORLD

PRESENTED BY RED HAT

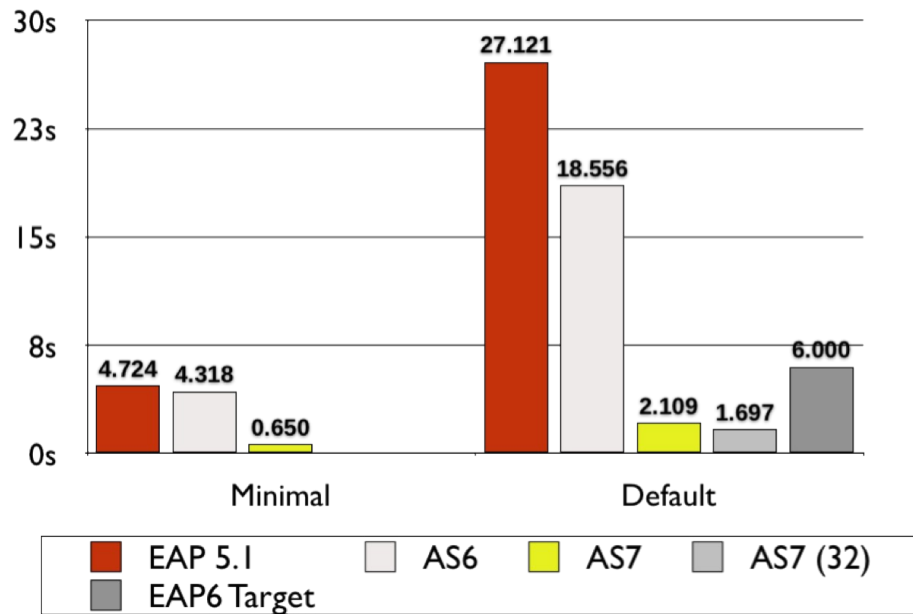

# Performance

- Better multi-processor support
  - Lock-less concurrent class-loading
  - Concurrent service activation
  - Lazy service activation
- HornetQ Messaging
- Infinispan 2<sup>nd</sup> level cache, session replication
- Focus on benchmarking earlier in the lifecycle

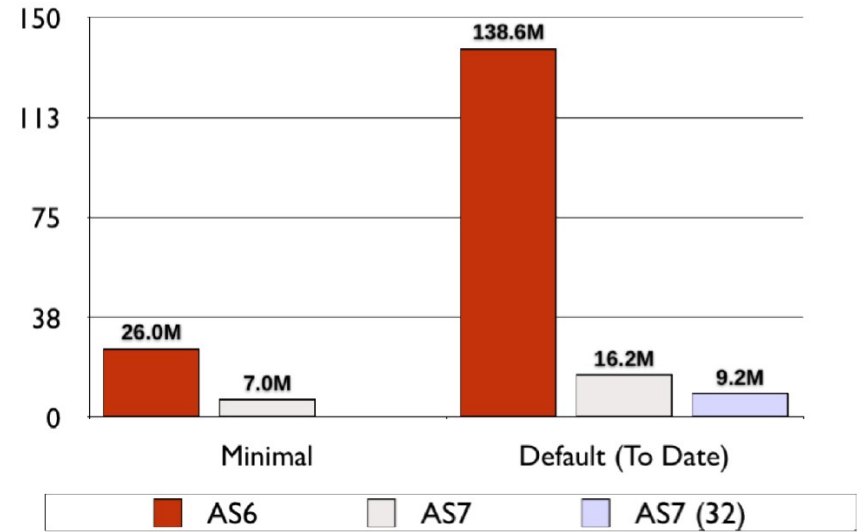

# Performance – Boot-time / Footprint

## Cold Boot Time

## Cold Boot Memory

# JBoss EAP Roadmap

## EAP 6.0 (Target : Start of CY12)

- Java EE 6
- Hibernate 4.x ?
- Operational Ease of Use
- Domain Management
- Performance & Scalability
- Developer Productivity

**SUMMIT**

# What do you Want ?

**Option 1** – Early delivery but only certified to Web Profile TCK. Would not include EJB 2, JSR 77, 88, JAX-RPC

**Option 2** – Deliver later (eg. Feb 2012) – full EE 6 TCK and possibly Hibernate 4.

# JBoss Enterprise Data Grid 6

Early Access

# Market Background - The Data Explosion

- **Digital Data Growth : 2009 – 0.8 ZB\* > 2020 – 35 ZB [1]**
- **Data Explosion driven by :**
  - Retail (we each leave a 50Gb data trail each year)
  - Web of Things (Smart Phones, Tablets, Smart Grids, Logistics, etc.)
  - PCI, FISMA, HIPPA, SOX, Basel II
- **Data access / analysis expectations growing**
  - real-time, on-demand
- **Coping Strategies**
  - Vertically scale – Mainframe, ExaData
  - Horizontally scale – RAC, Clustering
  - Innovation - Sharding, Columnar Storage, k-v stores, RAM not Disk

\*1 Zettabyte =  $10^{21}$  Bytes or 1 million Tbs

# Data Caching Competitive Overview

Figure 4 Forrester Wave™: Elastic Caching Platforms, Q2 '10

*“Red Hat’s Infinispan is a Contender, and we expect a powerful one.”*

*Infinispan is in a very early stage of commercialization, but Forrester expects it to gain lots of attention from Java developers and eventually build a position in the market as a strong alternative”*

PRESENTED BY RED HAT

# What is Infinispan?

- **Open Source (LGPL) Data Grid**
- **Started in 2008, Java and Scala**
- **Evolution of JBoss Cache (started 2004)**
- **Some concepts from Amazon Dynamo**
- **Two usage modes**
  - Embedded
  - Client-server
    - memcached
    - Hot Rod
    - REST

**SUMMIT**

**JBoss  
WORLD**

**PRESENTED BY RED HAT**

# What is Infinispan?

- **Consistent hash based distribution**
  - Self healing
  - No single point of failure
  - Fast and deterministic
- **Highly concurrent**
  - Lock and Synchronization free design
  - MVCC locking
- **XA Transaction Support**
  - 2-phase commit based
  - Deadlock detection algorithms

**SUMMIT**

**JBoss  
WORLD**

PRESENTED BY RED HAT

# What is Infinispan?

- **Persistence**

- Not just an in-memory store
- Write through and write behind
- Pluggable “drivers” (File, B-Tree, S3, etc.)

- **Eviction and expiry**

- Efficient, adaptive algorithms
- Addresses shortcomings of LRU & FIFO

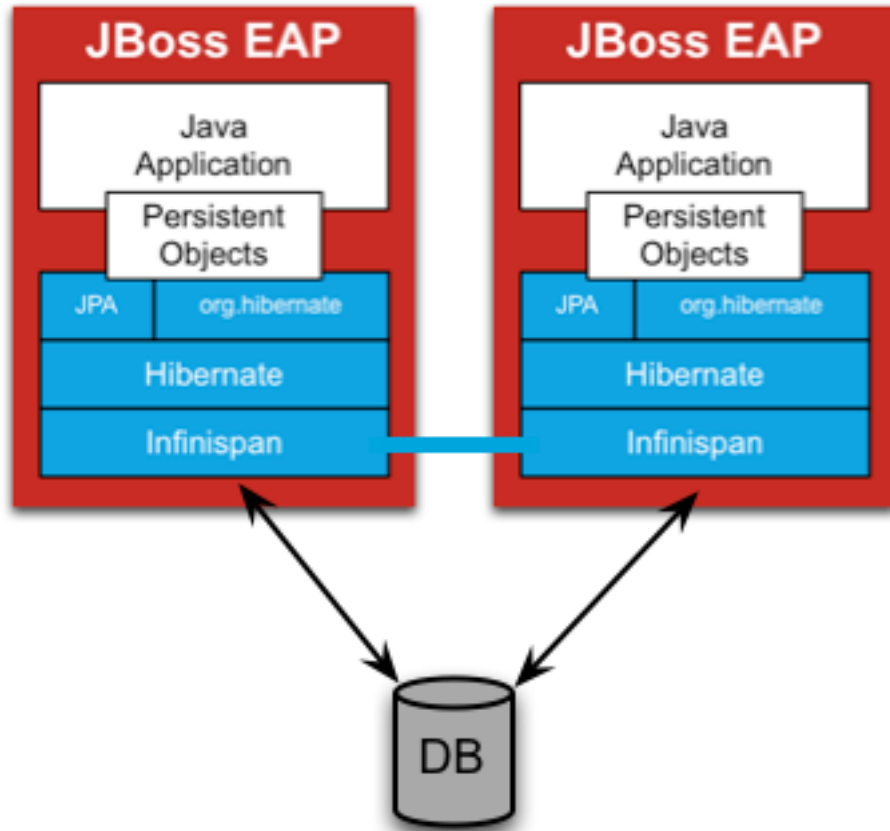

# What is Infinispan ?

- **APIs**
  - Map-like key-value store
  - JSR-107 Support
  - Upcoming JPA-like layer
  - Other high-level APIs being considered e.g., ActiveRecord

# Embedded

- **eg. embedded in EAP**
  - Hibernate 2<sup>nd</sup> Level Cache
  - EJB and Servlet session replication
  - Map-like API / JSR-107
  - EAP 4 / 5 used JBoss Cache 2 / 3
  - EAP 6 will use Infinispan 5.0
- **Can also be embedded in a JVM – doesn't require EE**

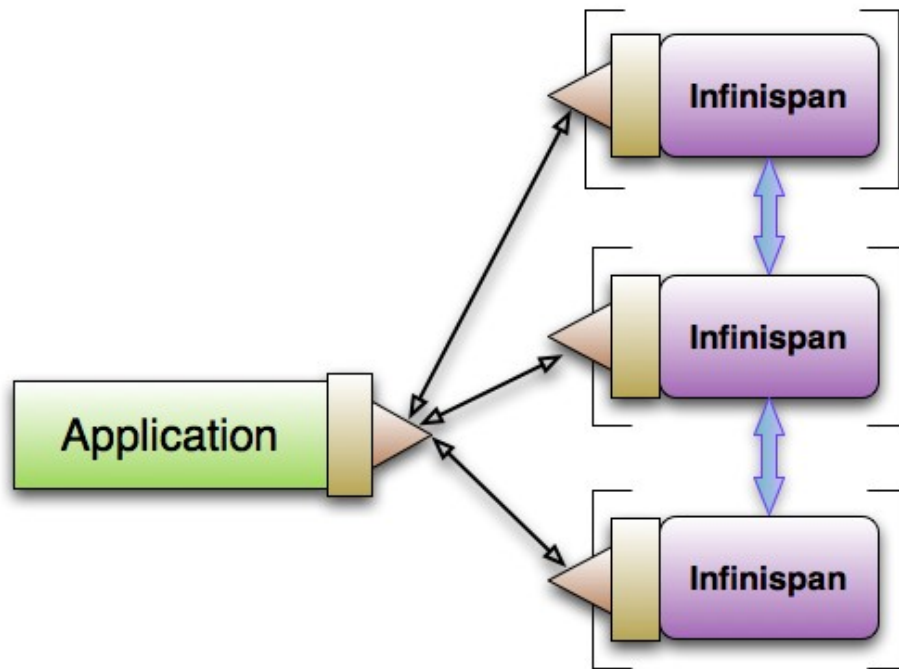

**SUMMIT**

**JBoss  
WORLD**

PRESENTED BY RED HAT

# Client / Server

- **Supported Protocols**
  - REST
  - Memcached
  - HotRod
    - Wire protocol
    - Smart routing
    - Failover / Load balancing

**SUMMIT**

**JBoss  
WORLD**

PRESENTED BY RED HAT

# Server end-point comparison

	<b>Protocol</b>	<b>Client Libraries</b>	<b>Clustered ?</b>	<b>Smart Routing</b>	<b>Load Balancing/ Failover</b>
<b>REST</b>	<b>Text</b>	N/A	<b>Yes</b>	<b>No</b>	Any HTTP load balancer
<b>Memcached</b>	<b>Text</b>	Plenty	<b>Yes</b>	<b>No</b>	Only with predefined server list
<b>Hot Rod</b>	<b>Binary</b>	Currently only Java	<b>Yes</b>	<b>Yes</b>	Dynamic

# JBoss Enterprise Data Grid

## EDG 6.0 (Target : Q4 CY2011)

- Based on Infinispan 5.0
- Java, Memcached, HotRod and REST APIs
- Write-through, write-behind to persistent storage
- Consistent hash-based data distribution
- Sophisticated eviction strategies
- Code-execution framework
