Making Portals Cool :

The Compelling Advantages of a Portlet Bridge

Wesley Hales

Senior Developer, JBoss by Red Hat

5/6/2011

SUMMIT

WORLD

PRESENTED BY RED HAT

About Wesley

- JBoss Portlet Bridge Lead
- Core GateIn Developer
- JSR-301/329 Red Hat Rep.
- Committer on Mozilla, Apache, Richfaces....
- Multiple series on InfoQ, Dzone, Refcards, personal blog, etc...
- www.wesleyhales.com
- @wesleyhales

Define “Cool”...

- Smooth learning curve
- Easy “Scaffolding” or project setup
- Enterprise Ready:

Supportable

Extensible

Clusterable, etc...

SUMMIT

JBoss

What is a Portal?

- Portals host the UI layer of many different systems.
- Manages Identity
- Tailored content and services
- Collaboration via CMS
- Social applications
- Security, Internationalization, etc...

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

What is a Portlet?

- Portlets can be written natively using JSP or vendor specific technology
- Majority of the time, a portlet is just a web app.

Basic Portlet Controls and Terminology

The screenshot shows a web browser window titled "Account Portlet". Inside the window, there are two tabs: "Account Setting" (selected) and "User Profile". The "Account Setting" tab contains a form with the following fields:

- User Name: *
- Password: *
- Confirm Password: *
- First Name: *
- Last Name: *
- Email Address: *

Below the form are two buttons: "Save" and "Reset". At the bottom left of the window, the text "Done" is visible.

PRESENTED BY RED HAT

Portlet Development Basics

- No *real* standard for developing portlets
- Usability - Accounting for multiple apps on one page
- Multiple applications and 1 HTTP Request/Response

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Portlet Bridges

- In the past, most were homegrown and vendor specific
- Today there are 3 specifications covering JSF 1 & 2

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

The JBoss Portlet Bridge

Supports: JSR-301 & JSR-329

- JSF 1.x - 2.x
- RichFaces 3.x - 4.x
- Seam 2.x

(Seam 3 in the works along with CDI)

Future:

- Other web app frameworks like Spring, wicket, etc...

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

The JBoss Portlet Bridge (Features)

- Provides extensions for SSO
- Javascript collision prevention (why you should care)
- Parallel development which can be combined without issues
- WSRP support

SUMMIT

How the Portlet Bridge manages the Faces single request lifecycle

*See section 5.1 of the Bridge 2.0 spec for full details

Bridge Request Processing

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Why use JSF in portals?

- Component driven framework
- Large OSS/community driven projects
- Reuse of existing developer skill sets
- Repurpose legacy apps

SUMMIT

**JBoss
WORLD**

PRESENTED BY RED HAT

Reusing JSF Skillsets

- JSF developer == Portal Developer
- Both sides win (Developer/Employer)
- Minor learning curveballs

SUMMIT

Checking the request/response

1

```
Object request = FacesContext.getCurrentInstance().  
    getExternalContext().getRequest();
```

```
if (request instanceof ActionRequest)
```

```
{
```

```
    ...
```

2

```
    ((ActionRequest)request).setCharacterEncoding();
```

```
}
```

```
if (request instanceof RenderRequest)
```

```
{
```

```
    ...
```

```
    ((RenderRequest)request).getRemoteUser();
```

```
}
```

3

***also Resource and Event requests**

Public Render Parameters

- BridgePublicRenderParameterHandler
- Simple
- Map them to any BackingBean member (via faces-config.xml)

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Publishing Parameters

1

(prp publisher) portlet.xml

```
<supported-public-render-parameter>  
    myParameter  
</supported-public-render-parameter>
```

2

(prp consumer) portlet.xml

```
<init-param>  
    <name>javax.portlet.faces.bridgePublicRenderParameterHandler</name>  
    <value>org.my.app.PRPHandler</value>  
</init-param>
```

3

myBean#publishParam()

```
if (response instanceof StateAwareResponse) {  
    StateAwareResponse stateResponse = (StateAwareResponse) response;  
    stateResponse.setRenderParameter("myParameter", "paramValue");  
}
```

Web Develop...

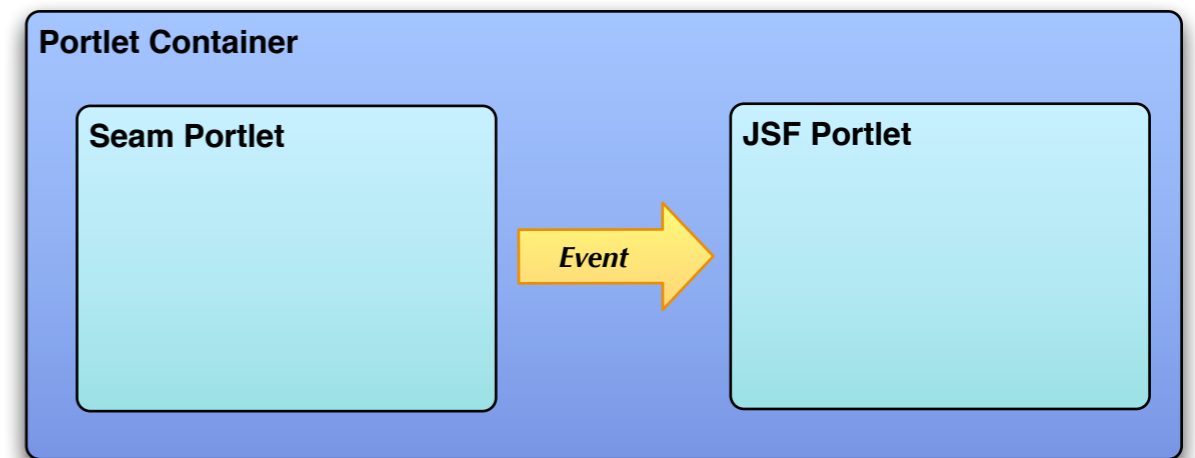

A palette is not available.

An outline is not available.

Sending and Receiving Portlet Events

- BridgeEventHandler
- Standard config in portlet.xml
- Send or receive from any portlet (not just JSF)

Sending Events

1

(event publisher) portlet.xml

```
<init-param>
  <name>javax.portlet.faces.autoDispatchEvents</name>
  <value>>true</value>
</init-param>
```

2

(event consumer) portlet.xml

```
<init-param>
  <name>javax.portlet.faces.bridgeEventHandler</name>
  <value>org.my.app.EventHandler</value>
</init-param>
```

3

myBean#publishEvent()

```
if (response instanceof StateAwareResponse) {
  StateAwareResponse stateResponse = (StateAwareResponse) response;
  stateResponse.setEvent(MyEvent.QNAME, new MyEvent());
}
```

Navigation (Changing Portlet Modes)

- Seamless integration with JSF
- Easy way to leverage built in features

```
<navigation-rule>  
  <from-view-id>/register.jspx</from-view-id>  
  <navigation-case>  
    <from-outcome>edit</from-outcome>  
    <to-view-id>/edit.jspx?javax.portlet.faces.PortletMode=edit</to-view-id>  
  </navigation-case>  
</navigation-rule>
```

Tips & Tricks

- Sharing data via `APPLICATION_SCOPE`
- Automatic script wrapping
- Working with portlet preferences and EL

SUMMIT

JBoss
WORLD

PRESENTED BY RED HAT

Sharing data via APPLICATION_SCOPE

```
@PortletScope(PortletScope.ScopeType.APPLICATION_SCOPE)
@Name("portletA")
```

PortletB.java

```
if(request instanceof ResourceRequest)
PortletA portleta =
    (PortletA)FC.getExternalContext.getSessionMap().get("portletA");
```

Automatic Javascript Namespacing

```
<context-param>
  <param-name>org.jboss.portletbridge.WRAP_SCRIPTS</param-name>
  <param-value>>true</param-value>
</context-param>
```

PRESENTED BY RED HAT

Expression Language

1

portlet.xml

```
<portlet-preferences>
  <preference>
    <name>forumPosts</name>
    <value>25</value>
    ...
```

2

home.xhtml

```
<h:form>
  <h:inputText
    value="#{mutablePortletPreferencesValues['forumPosts'].value}" />
  <h:commandButton actionListener="#{myBean.savePref}"
    value="Save Preferences" />
</h:form>
```

3

myBean#savePref()

```
Object request = FacesContext.getCurrentInstance().getExternalContext().getRequest();
if (request instanceof ActionRequest) {
  ActionRequest actionRequest = (ActionRequest) request;
  PortletPreferences portletPreferences = actionRequest.getPreferences();
  portletPreferences.store();
```

Debugging

- Your JSF portlet runs as a servlet in parallel.
- Namespacing (combined portlet+JSF)

```
#{facesContext.externalContext.response.namespace}
```

- Custom JS will require its own namespace
- Remember that portlets may be asked to render more than once (interaction or not)
