odoo

During the development of v9, we felt it was necessary to completely review the user interface.

Being almost 2 years old, it wasn't up to modern standards anymore, and suffered usability issues due to the addition of the many v8 features.

odoo

So, before long, we decided to follow the principles of Google Material Design for its many advantages.

BUT WHY MATERIAL DESIGN?

it's simple

The single menu approach and the use of deliberate empty spaces will help unclutter Odoo's interface.

it's efficient

The emphasis on main actions will make core functionality immediately apparent.

it's multi-devices

We'll be able to unify the user experience across all platforms and devices (and front-end / back-end!)

it's strong-branded

The deliberate and bold color choices will immerse the user in Odoo's ecosytem.

it's eye-pleasing

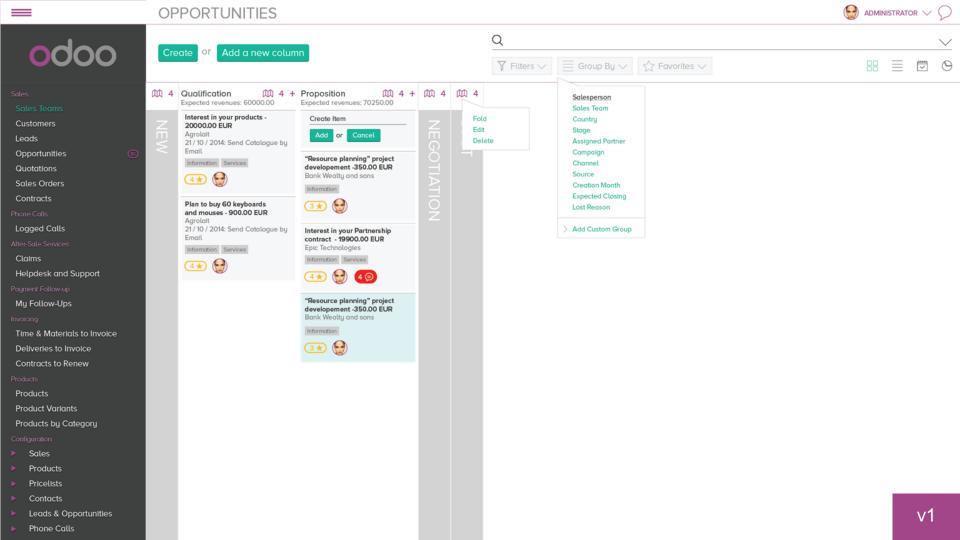

The combination of typography, effects and images creates simple yet beautiful interfaces.

odoo

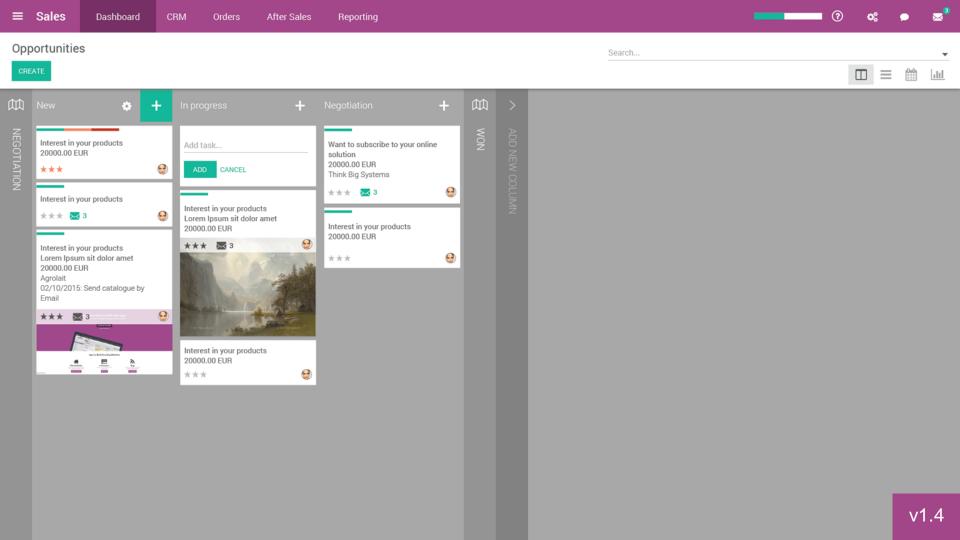

The design of the new interface was a lengthy process, for which we put a lot of thoughts and worked on many different iterations:

LET'S PLAY A GAME

Messaging Sales Point of Sale Project Association Accounting Purchases Warehouse Manufacturing Marketing Human Resources Lunch Fleet Knowledge Reporting Websi

In v8, where would you click for:

Events

- → in Marketing
- → in Messaging

Livechat

→ in Human Resources

Expenses

→ in Knowledge

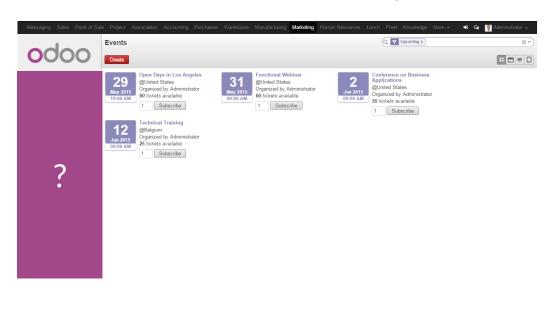

Blogs

→ in Messaging

Forum

ANOTHER GAME!

What's in the v8 Marketing app?

- → Fvents
- → Mailing Lists
- → Mass Mailing
- → Campaigns
- → Surveys
- → Certifications

IMPROVEMENT #1

In v9, each App has its own place and icon.

Apps by Core Business

The previous Apps classification by department could be confusing and disorienting for the users.

Example: if your are a non-profit organization with no Marketing department, it's strange to manage your Events in a Marketing app.

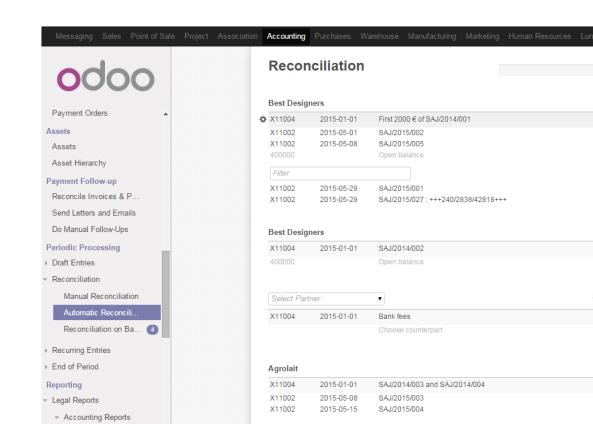

The new logic by Core Business will make access to Apps much easier.

WHERE'S MY LEFT MENU?

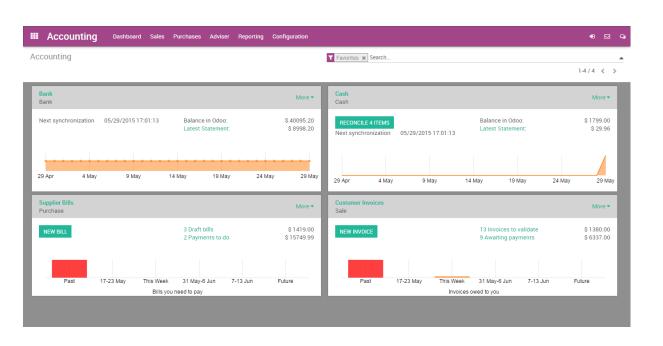

In v8, the left menu is emblematic, and is the main access to all the features.

But it is also very crowded.

And most of the time, users only need to access a few items of the menu.

Odoo 9 New Design | MPROVEMENT #2 What are the benefits?

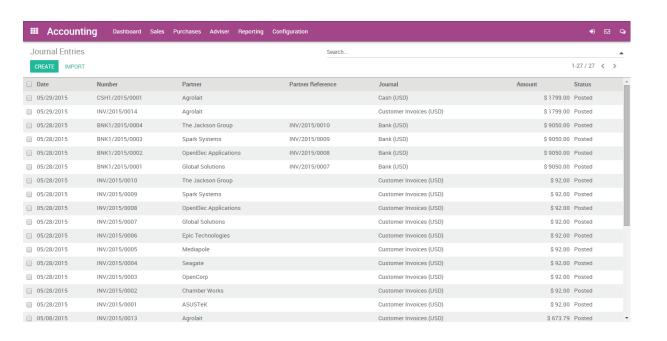

In v9, Dashboards give an immediate access to the top features.

Dashboards to access top features

The Dashboards concept is simple: presenting to the users most of the information they need within a single view, with the addition of a contextual call to action toward the main features.

Now, users don't have to scroll through a huge menu to find the few functions they use regularly.

Odoo 9 New Design MPROVEMENT #3 What are the benefits?

In v9, all views have had their readability increased.

More space and readability

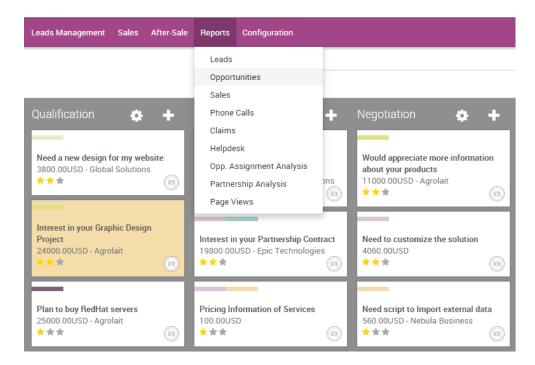

By moving the menus on the top bar, we were able to increase the size and readability of many UI elements:

Card views (products, customers...)

Kanban views (tasks, opportunities...)

List views (journal entries, transfers...)

Odoo 9 New Design | MPROVEMENT #4 What are the benefits?

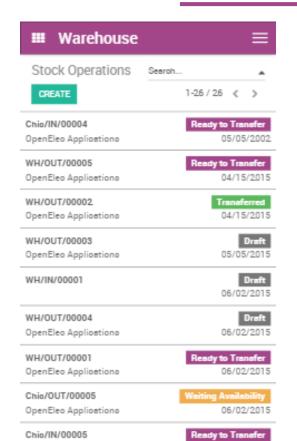

Reports and Configuration are integrated inside each App.

Integrated Reporting and Configuration

Putting Reports and Configuration back into each App has many advantages:

- Shorter and clearer menus
- 1-click access (no intermediate screen)
- No more switching between Apps

Odoo 9 New Design MPROVEMENT #5 What are the benefits?

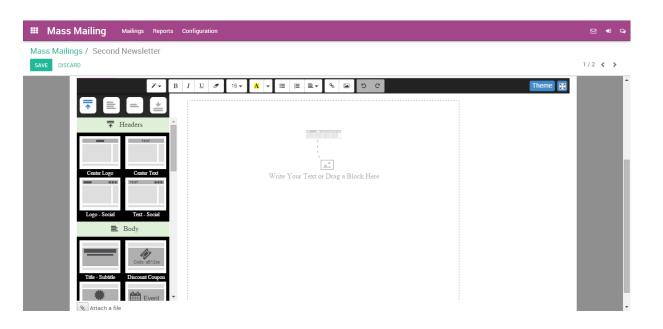

Mobile responsive and optimized

The new Odoo 9 design is not only fully responsive, it's also optimized for use on Mobile phone.

For example, we developed specific code to hide empty fields in form views to gain space when on a Mobile.

Odoo 9 New Design MPROVEMENT #6 What are the benefits?

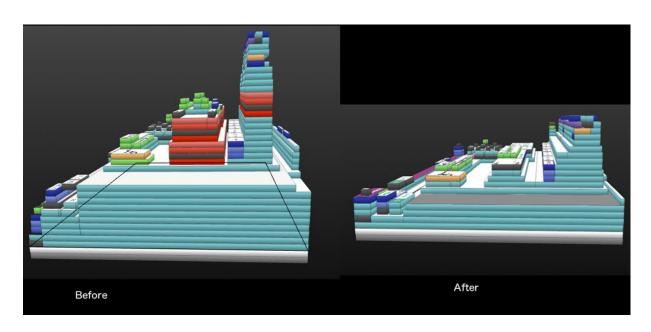

Unified back-end / front-end

In v8, users were often switched to back-end or front end with no warning, when clicking on an Edit button for example.

In v9, front-end and back-end are completely integrated for a seamless user experience.

You can now use the front-end HTML editor in back-end.

Odoo 9 New Design | MPROVEMENT #7 What are the benefits?

Comparison of DOM tree depth between Odoo 8 and Odoo 9

Super fast loading, no more flickering

We did not only improve the interface, we also completely refactored the HTML/CSS.

- Loading times have been greatly reduced
- Flickering/building effects when switching views have been eliminated
