

# The Odoo Revolution

# Current ERPs

## Accounting Centric Model

This approach is so 2000...

Most companies have an ERP for the core and several extra apps, not fully integrated...

# Modern companies needs

Modern companies face new challenges

**Modern companies are not  
accounting centric, they are  
“customer centric”!**

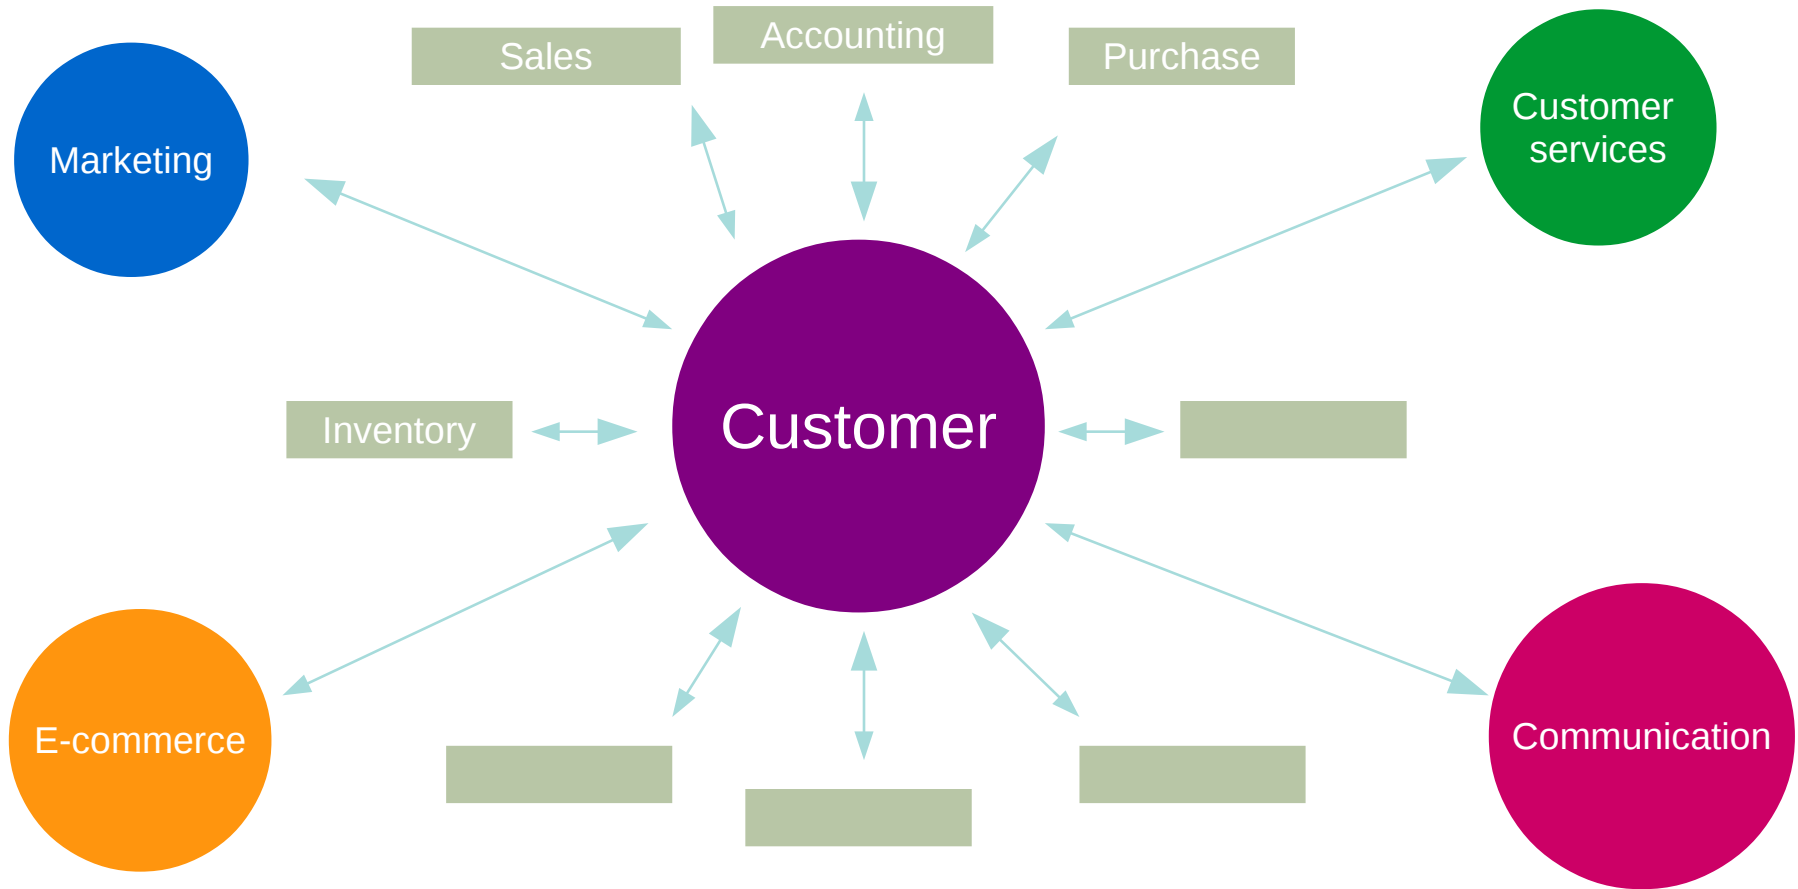

Customers became the challenge of modern companies, not only integrating accounting.

They use plenty of **non integrated apps** for customer related functions: POS, mass mailing, lead tracking, eCommerce, sales consolidation, after sales services, communication tools...

**But you can't offer an amazing and unified customer experience without integration.**

# The Odoo Approach

Modern Companies are Customer Centric

# Being Customer Centric

## Traditional ERPs

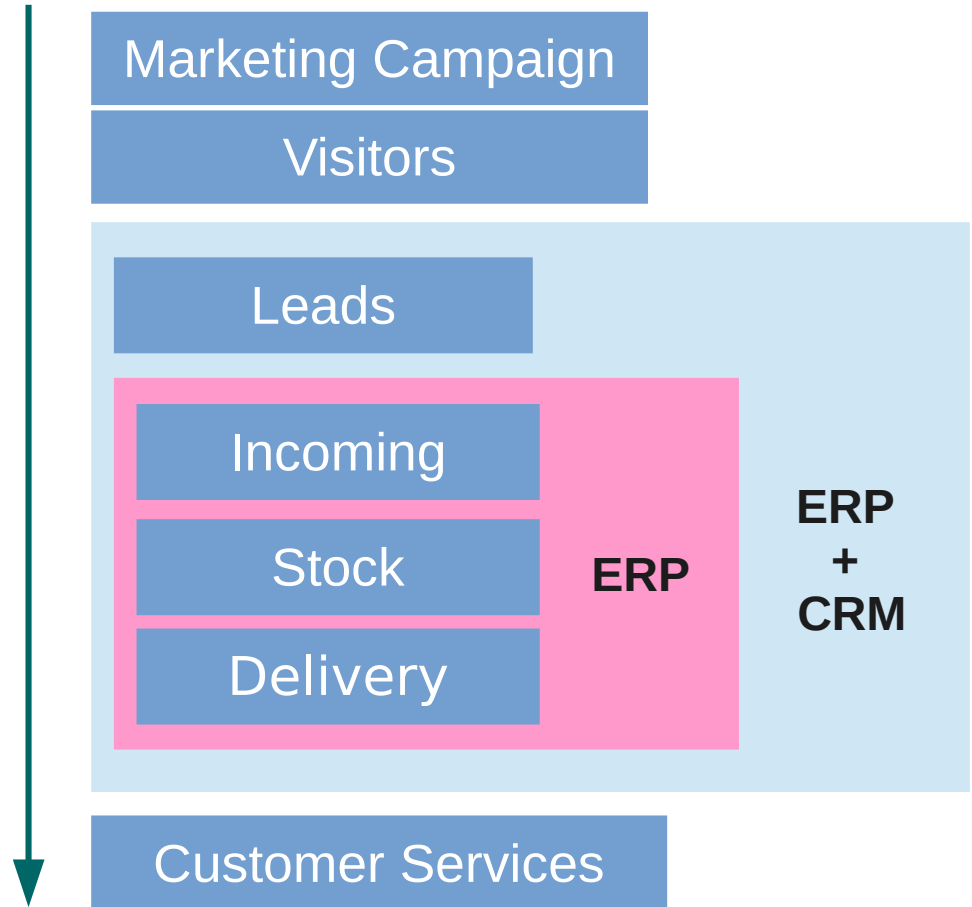

# Example 1: Traceability

## Traditional ERPs

## Odoo

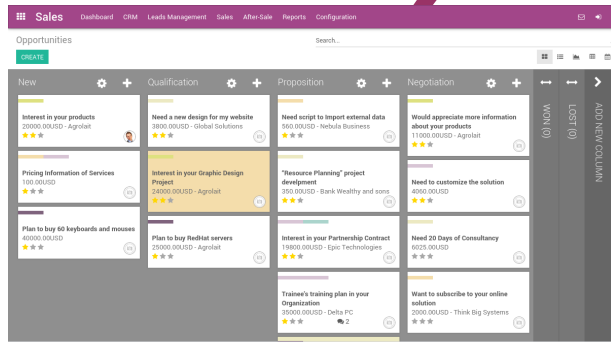

# Frontend / Backend integration

# Integrate ALL sales channel

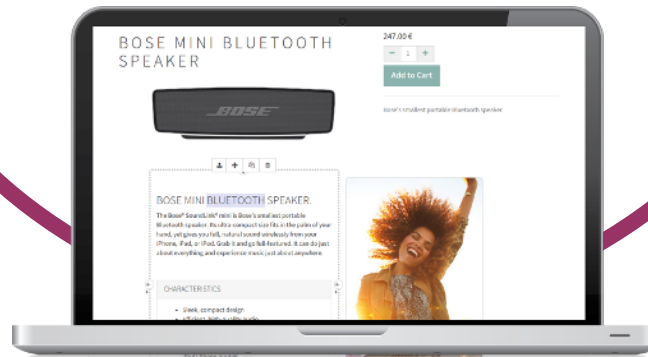

CRM

Point of Sales

E-Commerce

## Traditional ERPs

- ☒ For managers
- ☐ For Users

## Odoo

- ☒ For managers
- ☒ For Users

but the most impressive is...

- ✓ Easy to use
- ✓ Low configuration required
- ✓ Super flexible
- ✓ Cover all best practices

Odoo is much more than  
just a product...

# Not only a product...

---

All you need to transform a market

## Development Model

### Open Source

New releases by Odoo SA  
Continuous improvement by  
Community & Odoo.

## Revenue Model

### OE + Services

Sustainable for both  
partners and Odoo SA

Highly valuable product at  
A very low price for end users

# Next Steps

Going from 2M users to 10M users!

1

Massively  
Invest  
On The  
Product

## Q3 2014

Online users

## Q4 2014

On premise users

## **Focus on usability:**

- Reduce implementation costs (config, on boarding...)
- Not only the product but platform, docs, translations...
- Super fast & mobile

## **With the user in mind:**

- Boost employee productivity (do more with less efforts)

## **Reaching perfection:**

- Thousands of small details (rather than a few new apps)

## **Huge improvement on community apps:**

- Apps store (as a way to finance evolution for partners)

**Today, a smartphone without an app store is worthless. Tomorrow, an ERP without a strong apps store will be worthless too.**

**→ Odoo = the first enterprise apps store**

# 2

## User Experience And Customer Success

## Marketing:

- **Focus on** user experience: new website (ERP → Apps), docs & tutorials, customer feedback, translation to french, SaaS on boarding review, etc.
- **Work less on** attracting visitors / lead generation

## R&D:

- User on boarding
- Planners & configuration tools
- Fix all customer pain points

## Sales:

- Renewal teams → Customer Success team

# 3

## Align Everyone's Interests

Community,  
Partners,  
Customers,  
Odoo

# Currently: too much friction

---

**Odoo SA's** services include: selling documentation, training, upgrades, support, bugfixes (of the core), etc.

**Partners** services include: training, support, bugfixes (their modules + core), custom developments, implementation services

→ **Too much overlap!**

**In the future, Odoo SA will focus on a single source of revenues: extra features. We will not need anymore to monetize extra services.**

## **Impact:**

- Free documentation
  - Free trainings
  - Free upgrade tools (in 2016?)
  - No need to sell bugfixes (just do it)
- 
- Only one goal: help people use Odoo
  - Less friction with partners and OCA (e.g. OpenUpgrade)
