About US

Who are We?

- A Platinum member in OpenStack Foundation.
- A couple of teams in Intel who are working on or using OpenStack, including Data Center Group, Software and Services Group, Intel IT etc.
- Top 10 contributor since Grizzly (<http://stackalytics.com/>)
- A few cores in Ceilometer, Gantt, Horizon, oslo, Swift etc

Who are We?

- We are **dev** instead of **ops**
(the biggest OpenStack engineering team in Intel)
Datacenter and Cloud Software (DCS) Team
Open Source Technology Center (OTC)
Software and Services Group (SSG), Intel
- Teams at:
 - Shanghai (Zizhu) and Beijing (GTC) in China
 - Santa Clara and Portland in US

What are we doing in OpenStack?

- Nova, Neutron, Ceilometer, Ironic, TripleO, Congress, Horizon, Gantt, Cinder, Glance, Keystone etc. but Intel is doing more, including running OpenStack in Intel (which is called **iLab**)
- Meetup, summit, hackathon, corporation collaboration, tech support etc
- 《OpenStack设计与实现》

<http://item.jd.com/11681557.html>

Why does Intel do OpenStack?

- Make OpenStack a better choice for Enterprises
- Add Intel features to make OpenStack rich
- Optimize OpenStack on Intel platforms
- Build OpenStack ecosystem
- etc.

Stress on Datacenter Operations

Network

2-3 weeks to provision
new services¹

Storage

40% data growth,
90% unstructured³

Server

Average utilization <50%
despite virtualization⁴

New Challenges are coming....

1: Source: Intel IT internal estimate;

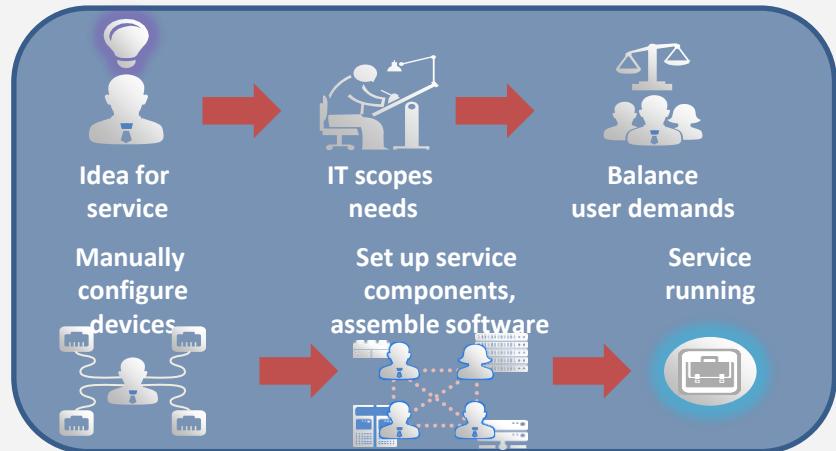

2: 3: IDC's Digital Universe Study, sponsored by EMC, December 2012;

4: IDC Server Virtualization and The Cloud 2012

Intel Private Cloud Vision

Self-provisioning, automated orchestration, composable resource pools

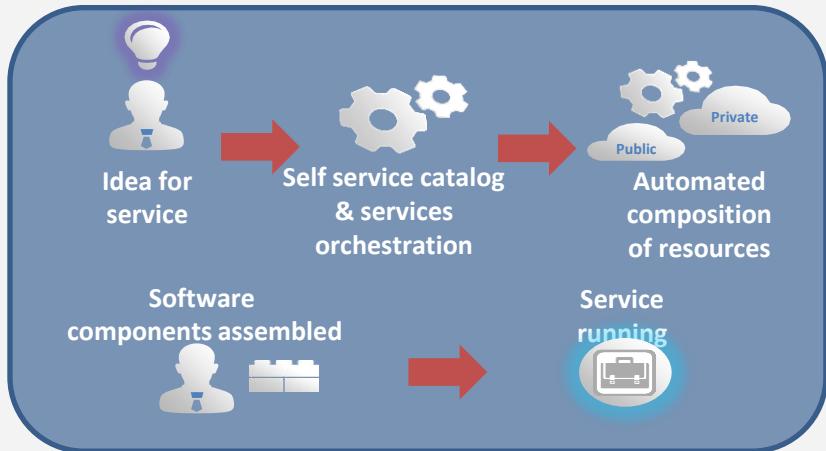

Datacenter Today

Time to Provision New Service: Months¹

1: Source: Intel IT internal estimate

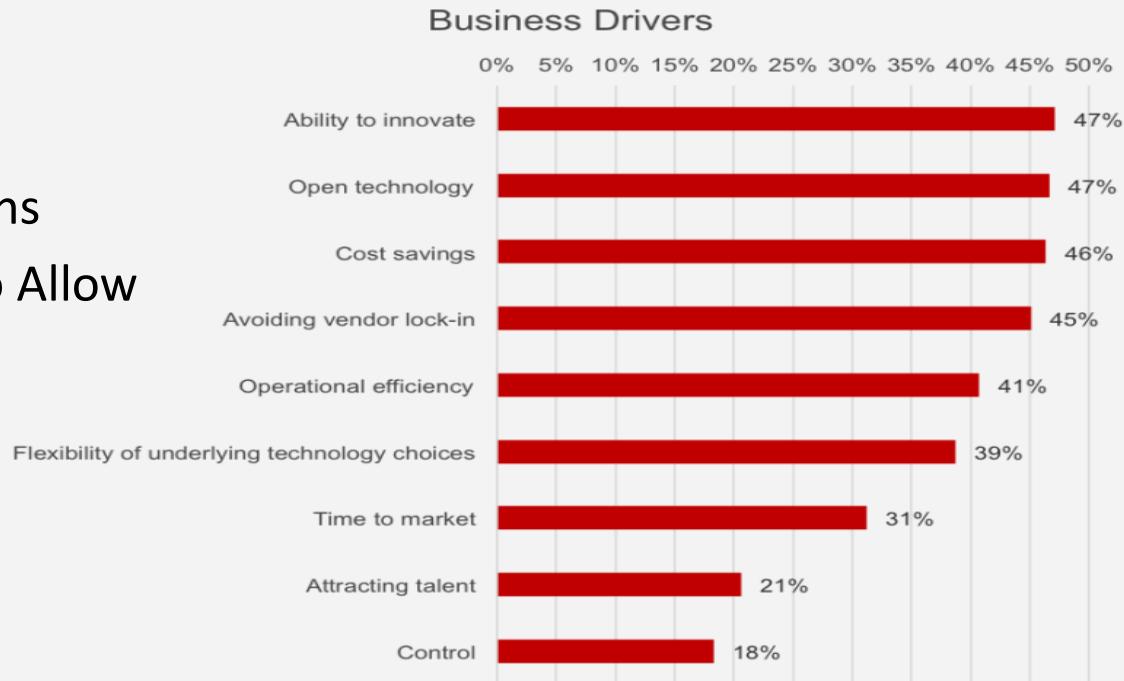

Software-Defined Infrastructure

Time to Provision New Service: Minutes¹

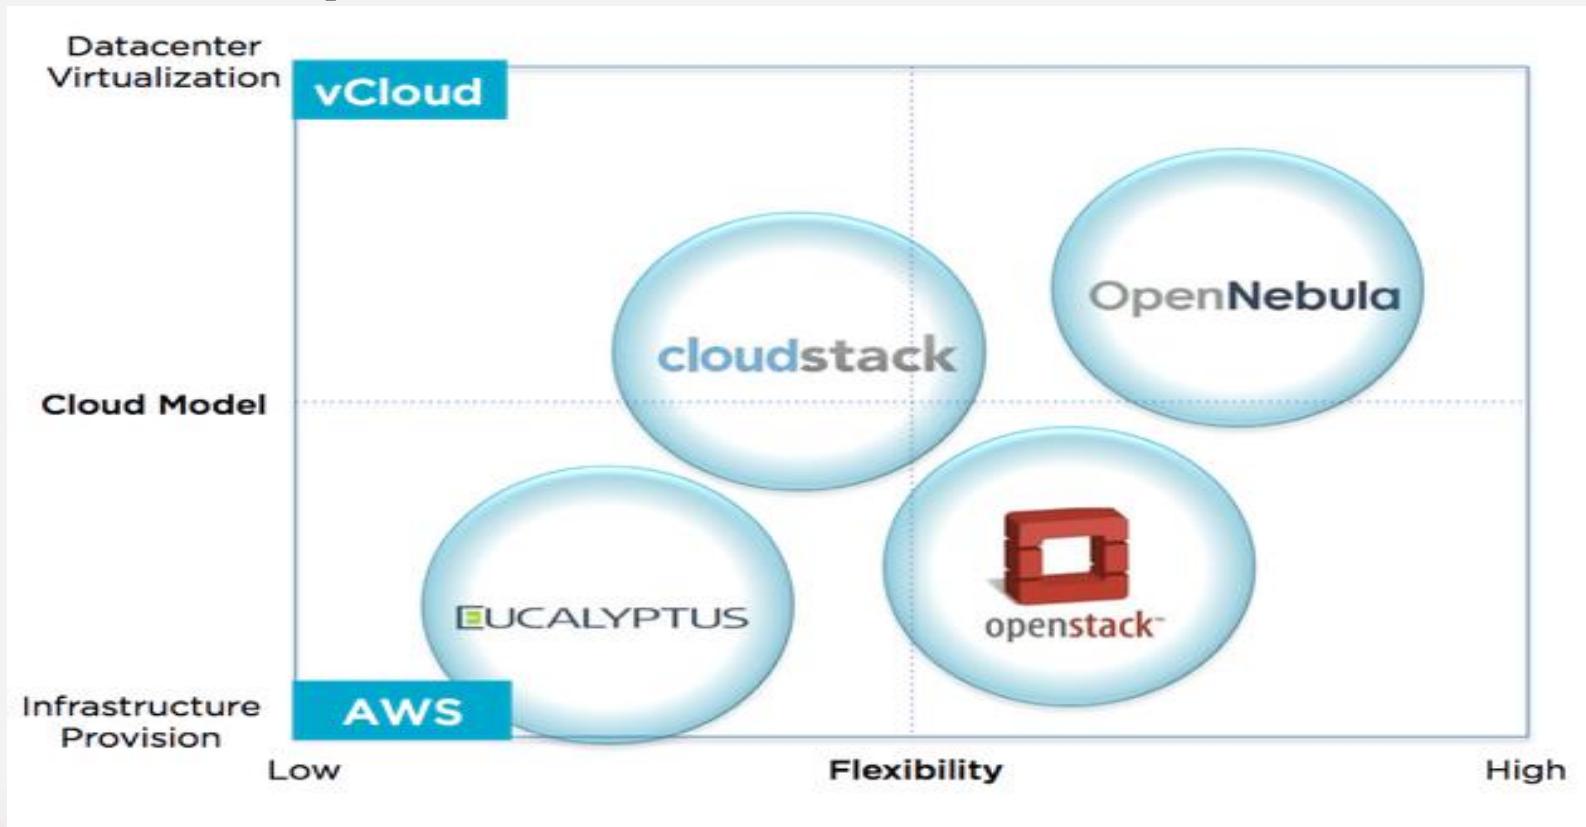

Why Open Source? Why OpenStack?

- Open and Free
- Relatively Mature
- Popular and Many adoptions
- Have Many Components to Allow Customization
- Avoid Vendor Locking
- Trend

OpenStack

企业就绪论坛

OpenStack As an Open-Source Project

OpenStack Services

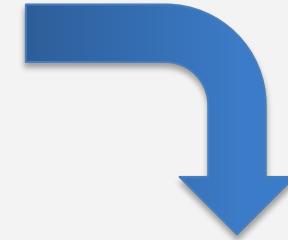

Other Bases

- Support
 - relies on the OpenStack community
- Documentation
- Message Queue
- Databases
- python
- Common libraries (oslo)

Enterprise Readiness Gaps

Different Companies have different needs

- Scale of hosts and VMs – 100-200 or 1K-2K?
- Real-time
- Cost and complexity
- Hardware purchasing consideration
- Security concerns
- Etc.

Open Source can't afford sufficient services

- Stability management
- Too many options, too many contributors, too many configurations
- Knowledge needed for ops
- Projects evolve and change
- Free support but no commitment
- Etc.

Deployment Stage

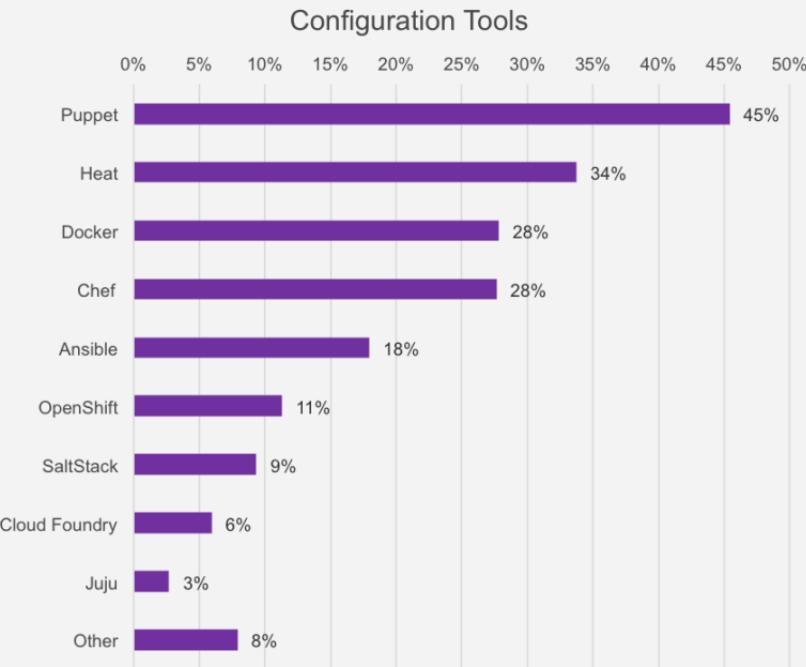

Deployment Type

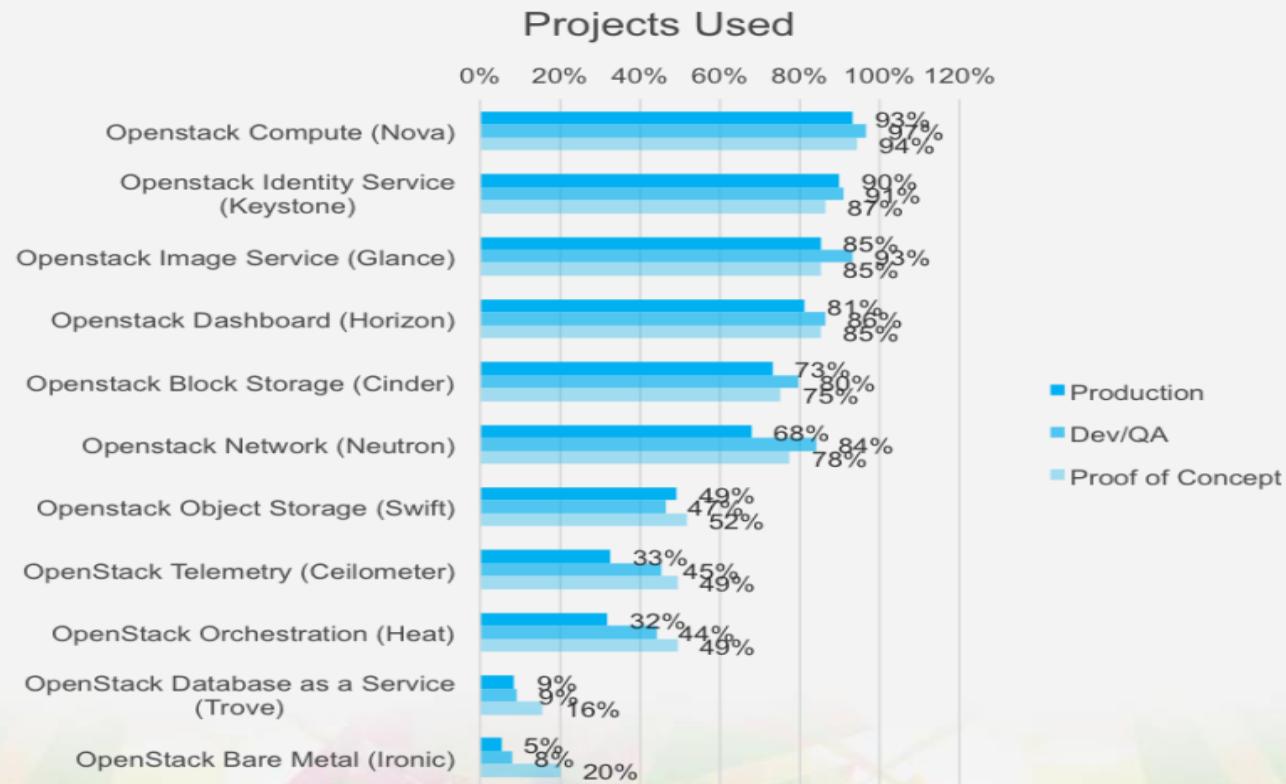

Deployment Tools

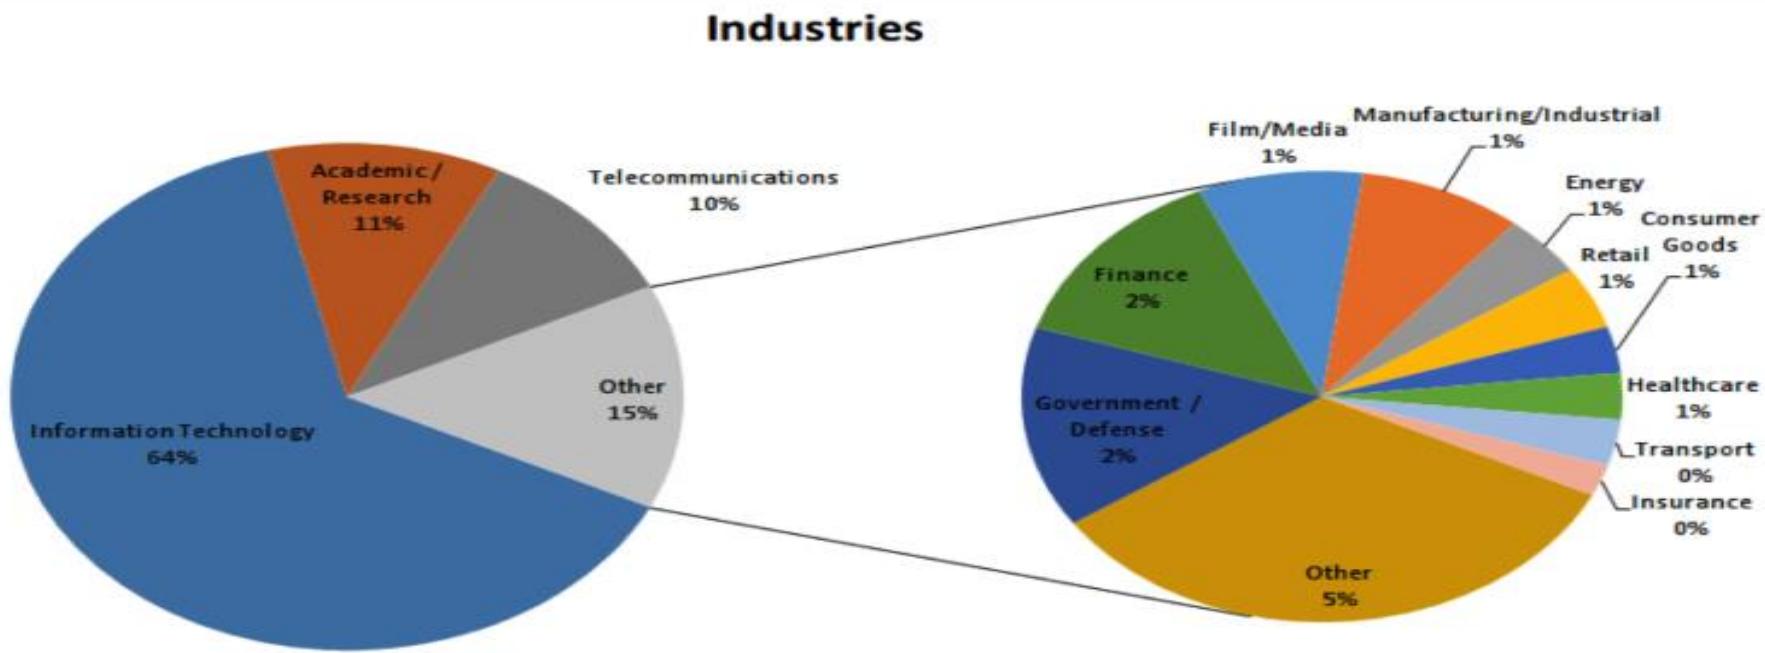

Configuration Tools

Projects Used

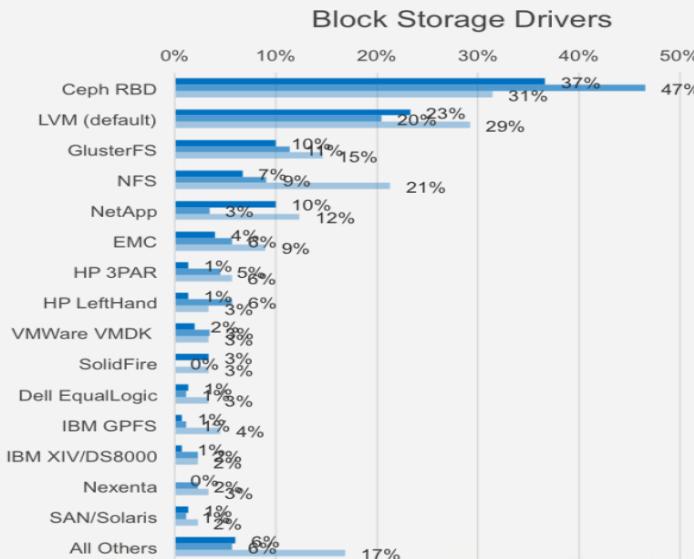

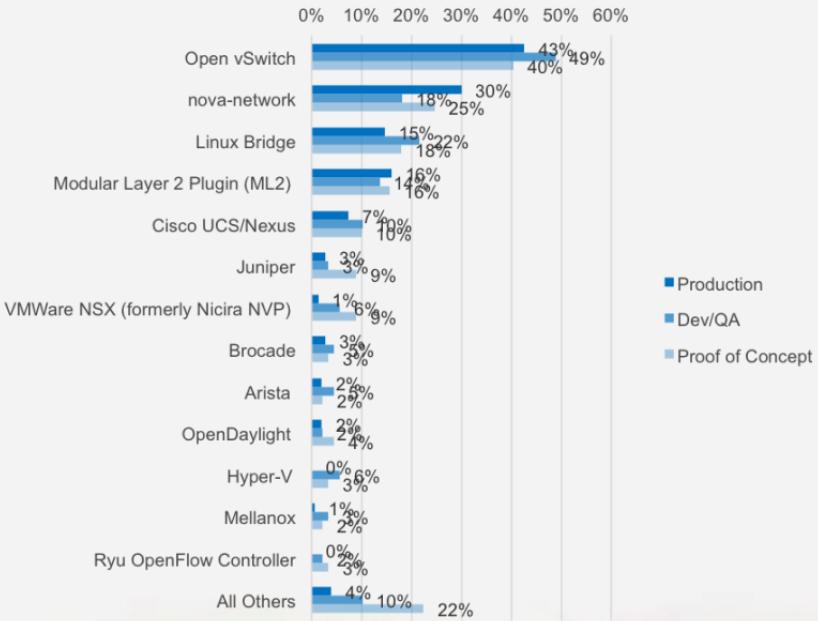

Industries

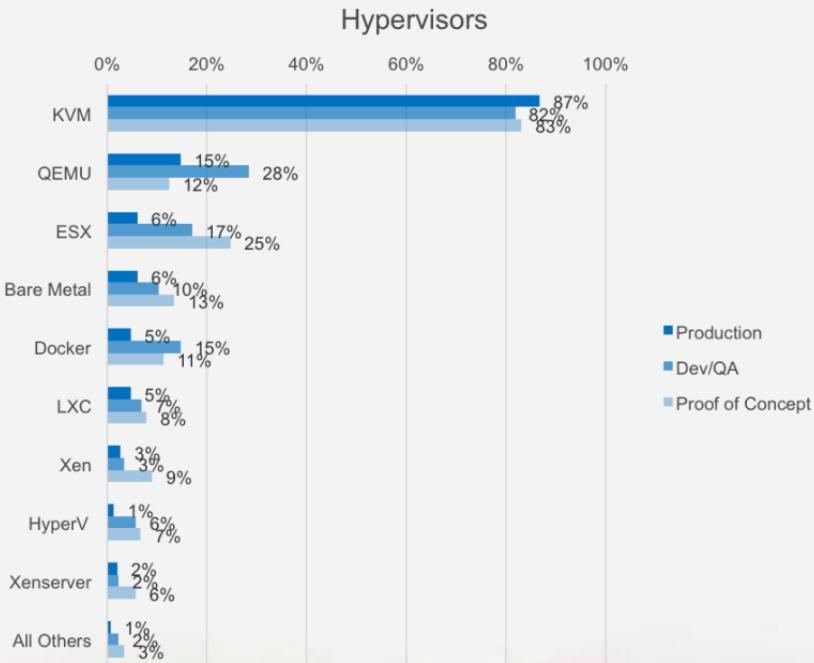

Network

Block Storage

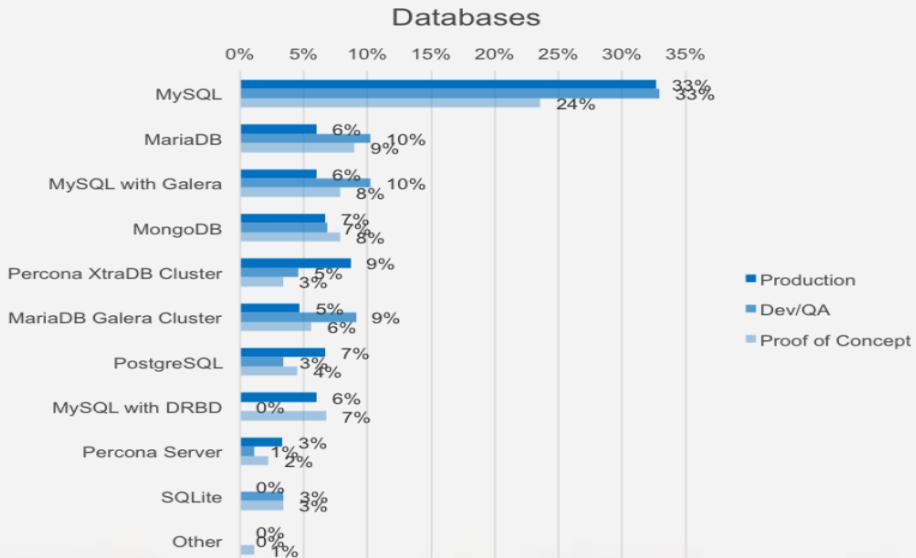

Network Drivers

Hypervisors

Databases

Pain Points

- Neutron is the top area of pain
 - Performance, stability and ease of use
 - High Availability
 - SDN use cases and IPv6 requirements
 - Robustly migrating nova-network to Neutron
 - Security groups, NFV, LBaaS
- Documentation is the second – e.g. Localization
 - Feature completion, out of date and not accurate
- Upgrades and High Availability
- Request a stronger Dashboard – e.g. Localization
- Ceilometer and Heat have a ways to go
- Logging

Win The Enterprise at OpenStack Foundation

Source: https://wiki.openstack.org/wiki/Win_the_Enterprise

Teams

- Business and Marketing
 - Identify market awareness and perception barriers to adoption
- Cattle and Pets
 - Identify today's barriers for on-boarding traditional enterprise IT workloads into OpenStack Cloud deployments
- Deployment
 - Understand enterprise IT requirements for OpenStack Cloud deployments and upgrades
- Monitoring
 - Work with OpenStack ops to understand the logging/monitoring requirements
- Operations
 - Address enterprise IT ops needs

Goals and Focuses

- Goals
 - Accelerate the deployment of OpenStack by Enterprise IT for Private or Hybrid Clouds
- Focuses
 - Deployment
 - Rolling Upgrades
 - Live Migration
 - Stability and Reliability
 - Legacy Infrastructure Integration/Migration

High Availability of Tenants

- VM Live Migration Hardening (speed & failure ratio)
 Nova Live Migration & Volume Migration
 - <https://blueprints.launchpad.net/nova/+spec/migrate-non-active-instances>
 - <https://blueprints.launchpad.net/nova/+spec/manager-restart-during-migration>
 - <https://blueprints.launchpad.net/nova/+spec/refresh-abort-live-migration>
 - <https://blueprints.launchpad.net/cinder/+spec/generic-volume-migration>
- Automatic Evacuation
 - <http://blog.russellbryant.net/2014/10/15/openstack-instance-ha-proposal/>
 - <https://blueprints.launchpad.net/nova/+spec/host-health-monitoring>
 - <https://blueprints.launchpad.net/nova/+spec/pacemaker-servicegroup-driver>
- Host Maintenance Mode
 - <https://blueprints.launchpad.net/horizon/+spec/migrate-all-instances-from-hosts-in-maintenance-mode>
 - <https://blueprints.launchpad.net/nova?searchtext=maintenance>

High Availability of Services

Always ON and respond during failure and massive stress

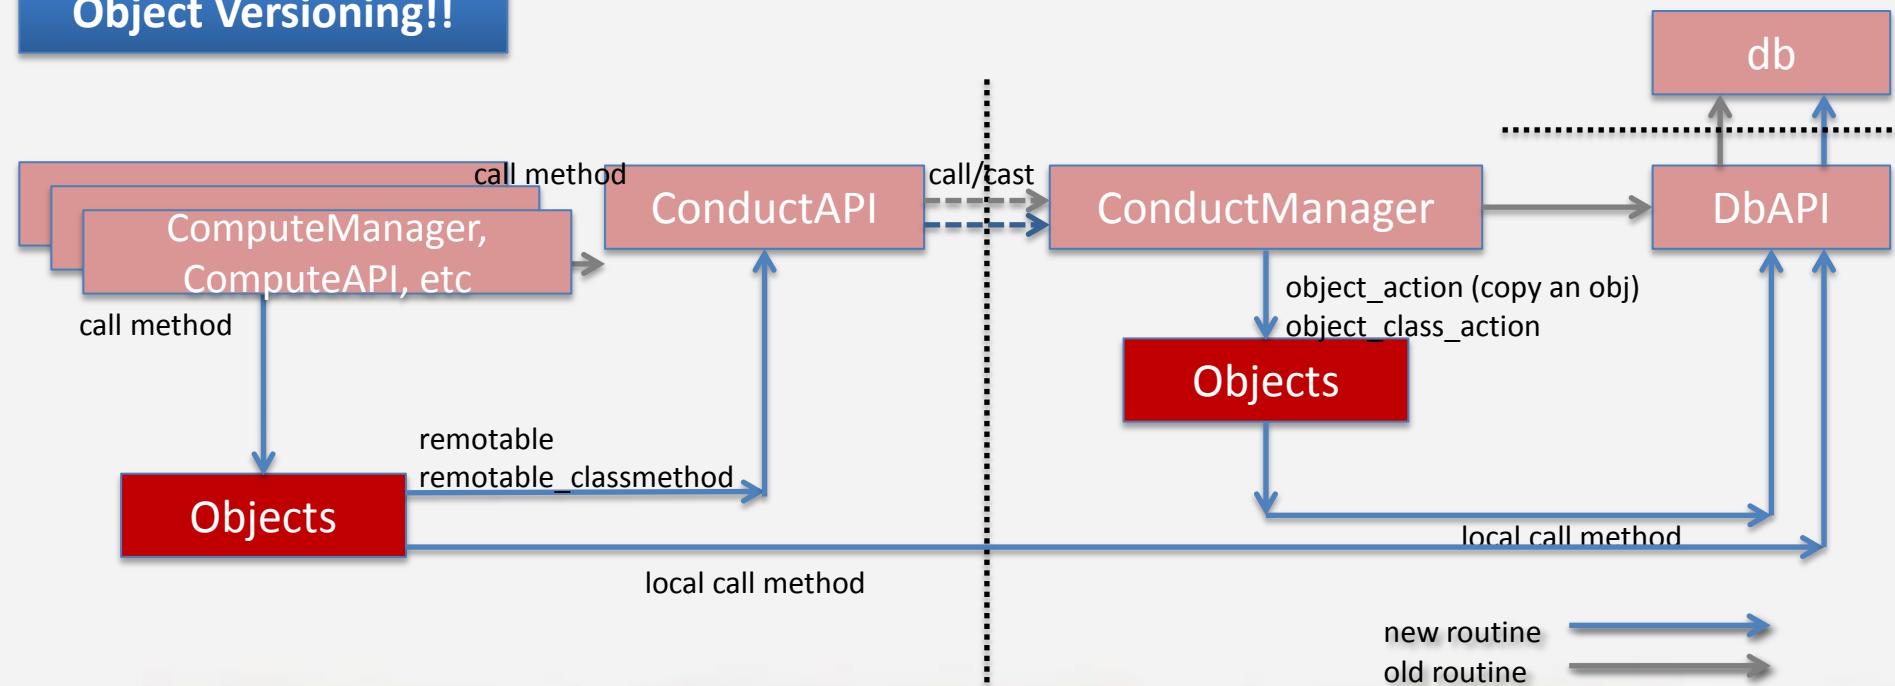

- HA guide is out of date
 - <http://docs.openstack.org/high-availability-guide>
- Requests are lost when Heat engine dies
 - <https://blueprints.launchpad.net/heat/+spec/convergence>
 - <https://blueprints.launchpad.net/heat/+spec/convergence-observer>
 - <https://blueprints.launchpad.net/heat/+spec/convergence-engine>
 - <https://blueprints.launchpad.net/heat/+spec/convergence-continuous-observer>
- No VLANs support in one of Neutron HA solutions
 - <http://specs.openstack.org/openstack/neutron-specs/specs/kilo/neutron-ovs-dvr-vlan.html> (**COMPLETED**)

High Availability of Services

- No retry in Glance
 - <https://blueprints.launchpad.net/glance/+spec/taskflow-integration>
- Unresolved state when Cinder service dies
 - <https://blueprints.launchpad.net/cinder/+spec/create-volume-persistence-taskflow-support>
 - <https://blueprints.launchpad.net/cinder/+spec/create-volume-persistence-taskflow-support-api>
 - <https://blueprints.launchpad.net/cinder/+spec/create-volume-persistence-taskflow-support-scheduler>
 - <https://blueprints.launchpad.net/cinder/+spec/create-volume-persistence-taskflow-support-volume>
- Cinder can't run in an Active/Active mode (owned by RH)

Rolling Upgrades

Object Versioning!!

Driving Monitoring Standards

- Collect dynamic runtime metrics in OpenStack Nova with monitor plugins on compute nodes
 - CPU utilization, memory usage, network bandwidth etc.
- Add physical host monitoring into OpenStack Ceilometer
 - Hardware pollsters, SNMP inspectors, and enhanced pipeline

OpenStack Service	Type	Metrics (e.g.)
Nova	Static capabilities	<ul style="list-style-type: none">• CPU features• hypervisor version
	Dynamic Resources	<ul style="list-style-type: none">• free memory/disk• vCPU #• PCI devices• # of NIC virtual functions
	Extensible runtime measurements	<ul style="list-style-type: none">• CPU time
Ceilometer	Resources creation/deletion	<ul style="list-style-type: none">• VM• network/subnet/port• image•
	Resources usage data	<ul style="list-style-type: none">• CPU usage in VM• memory usage in VM• network usage in VM• storage usage stats•
	Hardware related	<ul style="list-style-type: none">• CPU load• Memory usage• Network usage• Disk usage• Power consumption

Intelligent Workload Scheduling

- VM Placement

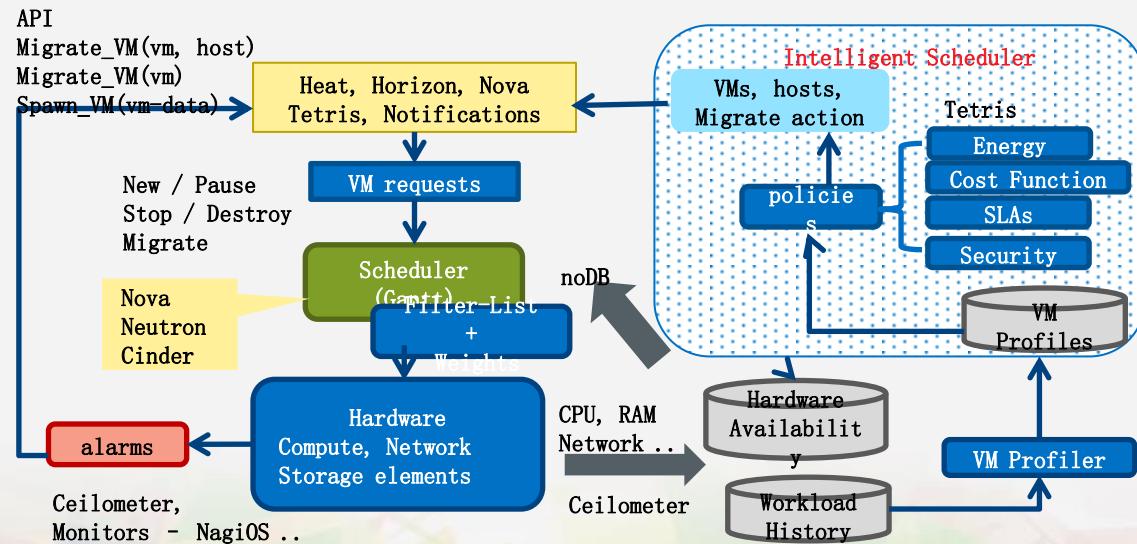

Utilization Based Scheduling

- Pluggable metric data collecting framework
- New filters/weighers in OpenStack Nova
- Monitor metrics
 - CPU load
 - Power & Thermal via IPMI

- VM Runtime

Dynamic Resource Reschedulling

- Reuse policy engine in OpenStack Congress
- Step towards SLA

Intel Enables OpenStack Deployments

Contributions

- Contributions across OpenStack projects plus tools released to Open Source
- Active contributor in OpenStack community
- Performance optimizations, validation and patches

Intel® IT Open Cloud

- Intel IT Open Cloud with OpenStack
- Deliver Consumable Services
- Enable Automated Management of Cloud

Intel® Cloud Builders Reference Architecture

Intel® Cloud Builders

Proven guidance to build and optimize cloud infrastructure

Frequent Q & A, Cloud Computing, IT Managers, Cloud Builders

Welcome to Intel® Cloud Builders – a cross-industry initiative aimed at making it easier to build, enhance, and operate cloud infrastructure. Intel Cloud Builders is focused on improving efficiency in your datacenter, reducing costs, and improving security, availability, and performance in your cloud environment.

Reference Architecture Library

Visit the reference architecture library to read proven cloud computing solutions for building and optimizing cloud infrastructure based on today's IT requirements. Reference architectures are designed to help you build a cloud networking security, and improving efficiency in your datacenter environment.

Cloud Computing Best Practices

Conversations in the Cloud Podcast Series

This weekly series features Cloud Builders companies discussing how their cloud computing solutions help IT users deploy and manage cloud computing technology in the enterprise.

Listen to the computing computing podcasts >

Intel® Cloud Builders Forum

Your cloud infrastructure is closer than you think. Join the discussion with other IT professionals who are already on the path to implementation.

Visit the Intel Cloud Builders Forum >

- Validate Intel IT customization of OpenStack
- Document best practices
- Share best practices with enterprises and services providers

Make Enterprises and cloud service providers deploy cloud solution successfully

Others

- Persistent connections for calls
- New filter, new scheduler considering rack
- Improve database throughput and performance
- Ceilometer tuning, time-series monitoring
- Real-time monitoring and alarming
- Speed up message Q handling, e.g. enable ZeroMQ
- Dashboard localization
- Deployment tool customization
- Storage optimization, e.g. fast boot
- Docker support
- Auto scaling
- Rollback support for rolling upgrades
- Mobile OpenStack Management
 - Authentication, Administration anywhere anytime, Alarming, ...
- so many others

OpenStack

企业就绪论坛

Summary

Is OpenStack Production Ready for Enterprise?

OpenStack Projects – Open Source

- Framework of a loosely coupled components
- A set of key components to run and satisfy minimum needs from enterprises
- Interests from different companies
- Open source community

Products – customized based on OpenStack

- Mature and stable enough
- Easy to deploy and use
- Customer needs satisfied
- Continuous technical support and service

Call for Actions

- Test OpenStack with your customers and collect feedbacks
- Report bugs as more as possible when you find them in the deployment
- Help to fix bugs as many as possible
- Bring WTE features to OpenStack upstream
- After fixing problems for your customers, try to contribute patches to WTE features in OpenStack

Legal Information

- Copyright © 2015 Intel Corporation. All rights reserved. Intel, the Intel logo, Xeon are trademarks of Intel Corporation in the U.S. and/or other countries. *Other names and brands may be claimed as the property of others.
- All products, computer systems, dates and figures specified are preliminary based on current expectations, and are subject to change without notice.
- The products described in this document may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request. Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order.
- No computer system can provide absolute security under all conditions. Built-in security features available on select Intel® processors may require additional software, hardware, services and/or an Internet connection. Results may vary depending upon configuration. Consult your system manufacturer for more details. For more information, see <http://security-center.intel.com/>
