

#### NAME

CPANPLUS::Shell::Default::Plugins::Source

#### **SYNOPSIS**

CPAN Terminal> /source /tmp/list\_of\_commands /tmp/more\_commands

#### DESCRIPTION

This is a CPANPLUS::Shell::Default plugin that works just like your unix shells source(1) command; it reads in a file that has commands in it to execute, and then executes them.

A sample file might look like this:

```
# first, update all the source files
x --update_source

# find all of my modules that are on the CPAN
# test them, and store the error log
a ^KANE$'
t *
p /home/kane/cpan-autotest/log

# and inform us we're good to go
! print "Autotest complete, log stored; please enter your commands!"
```

Note how empty lines, and lines starting with a '#' are being skipped in the execution.

### **BUG REPORTS**

Please report bugs or other issues to <bug-cpanplus@rt.cpan.org<gt>.
