NAME

Module::Build::YAML - Provides just enough YAML support so that Module::Build works even if YAML.pm is not installed

SYNOPSIS

```
use Module::Build::YAML;

    ...
```

DESCRIPTION

Provides just enough YAML support so that Module::Build works even if YAML.pm is not installed.

Currently, this amounts to the ability to write META.yml files when `perl Build distmeta` is executed via the Dump() and DumpFile() functions/methods.
