NAME

Tie::StdHandle - base class definitions for tied handles

SYNOPSIS

```
package NewHandle;
require Tie::Handle;

@ISA = qw(Tie::Handle);

sub READ { ... }   # Provide a needed method
sub TIEHANDLE { ... } # Overrides inherited method

package main;

tie *FH, 'NewHandle';
```

DESCRIPTION

The **Tie::StdHandle** package provide most methods for file handles described in *perltie* (the exceptions are UNTIE and DESTROY). It causes tied file handles to behave exactly like standard file handles and allow for selective overwriting of methods.
