

---

**NAME**

CPANPLUS::Module::Fake

**SYNOPSIS**

```
my $obj = CPANPLUS::Module::Fake->new(
    module   => 'Foo',
    path     => 'ftp/path/to/foo',
    author   => CPANPLUS::Module::Author::Fake->new,
    package  => 'fake-1.1.tgz',
    _id      => $cpan->_id,
);
```

**DESCRIPTION**

A class for creating fake module objects, for shortcut use internally by CPANPLUS.

Inherits from CPANPLUS::Module.

**METHODS****new( module => \$mod, path => \$path, package => \$pkg, [\_id => DIGIT] )**

Creates a dummy module object from the above parameters. It can take more options (same as CPANPLUS::Module->new but the above are required).
