

#### NAME

TAP::Parser::Result::Bailout - Bailout result token.

### **VERSION**

Version 3.17

# **DESCRIPTION**

This is a subclass of *TAP::Parser::Result*. A token of this class will be returned if a bail out line is encountered.

```
1..5
ok 1 - woo hooo!
Bail out! Well, so much for "woo hooo!"
```

# **OVERRIDDEN METHODS**

Mainly listed here to shut up the pitiful screams of the pod coverage tests. They keep me awake at night.

```
*as string
```

# **Instance Methods**

### explanation

```
if ( $result->is_bailout ) {
   my $explanation = $result->explanation;
   print "We bailed out because ($explanation)";
}
```

If, and only if, a token is a bailout token, you can get an "explanation" via this method. The explanation is the text after the mystical "Bail out!" words which appear in the tap output.
