NAME

Encode::EBCDIC - EBCDIC Encodings

SYNOPSIS

```
use Encode qw/encode decode/;
$posix_bc  = encode("posix-bc", $utf8); # loads Encode::EBCDIC
implicitly
$utf8 = decode("", $posix_bc);        # ditto
```

ABSTRACT

This module implements various EBCDIC-Based encodings. Encodings supported are as follows.

```
Canonical   Alias  Description
-------------------------------------------------------------------
cp37
cp500
cp875
cp1026
cp1047
posix-bc
```

DESCRIPTION

To find how to use this module in detail, see *Encode*.
