

#### NAME

Math::BigInt::CalcEmu - Emulate low-level math with BigInt code

#### **SYNOPSIS**

use Math::BigInt::CalcEmu;

# **DESCRIPTION**

Contains routines that emulate low-level math functions in BigInt, e.g. optional routines the low-level math package does not provide on its own.

Will be loaded on demand and called automatically by BigInt.

Stuff here is really low-priority to optimize, since it is far better to implement the operation in the low-level math library directly, possible even using a call to the native lib.
