

NAME

TAP::Base - Base class that provides common functionality to *TAP::Parser* and *TAP::Harness*

VERSION

Version 3.23

SYNOPSIS

```
package TAP::Whatever;

use TAP::Base;

use vars qw($VERSION @ISA);
@ISA = qw(TAP::Base);

# ... later ...

my $thing = TAP::Whatever->new();

$thing->callback( event => sub {
    # do something interesting
} );
```

DESCRIPTION

TAP::Base provides callback management.

METHODS

Class Methods

callback

Install a callback for a named event.

get_time

Return the current time using *Time::HiRes* if available.

time_is_hires

Return true if the time returned by *get_time* is high resolution (i.e. if *Time::HiRes* is available).
