NAME

TAP::Parser::Scheduler::Job - A single testing job.

VERSION

Version 3.23

SYNOPSIS

```
use TAP::Parser::Scheduler::Job;
```

DESCRIPTION

Represents a single test 'job'.

METHODS

Class Methods

new

```
my $job = TAP::Parser::Scheduler::Job->new(
    $name, $desc
);
```

Returns a new `TAP::Parser::Scheduler::Job` object.

on_finish

Register a closure to be called when this job is destroyed.

finish

Called when a job is complete to unlock it.

filename

description

context

as_array_ref

For backwards compatibility in callbacks.

is_spinner

Returns false indicating that this is a real job rather than a 'spinner'. Spinners are returned when the scheduler still has pending jobs but can't (because of locking) return one right now.
