

# **NAME**

Encode::EBCDIC - EBCDIC Encodings

## **SYNOPSIS**

```
use Encode qw/encode decode/;
   $posix_bc = encode("posix-bc", $utf8); # loads Encode::EBCDIC
implicitly
   $utf8 = decode("", $posix_bc); # ditto
```

# **ABSTRACT**

This module implements various EBCDIC-Based encodings. Encodings supported are as follows.

# **DESCRIPTION**

To find how to use this module in detail, see *Encode*.
