

## NAME

TAP::Base - Base class that provides common functionality to *TAP::Parser* and *TAP::Harness*

## VERSION

Version 3.30

## SYNOPSIS

```
package TAP::Whatever;

use base 'TAP::Base';

# ... later ...

my $thing = TAP::Whatever->new();

$thing->callback( event => sub {
    # do something interesting
} );
```

## DESCRIPTION

TAP::Base provides callback management.

## METHODS

### Class Methods

#### callback

Install a callback for a named event.

#### get\_time

Return the current time using Time::HiRes if available.

#### time\_is\_hires

Return true if the time returned by get\_time is high resolution (i.e. if Time::HiRes is available).
