

## NAME

corelist - a commandline frontend to Module::CoreList

## DESCRIPTION

See *Module::CoreList* for one.

## SYNOPSIS

```
corelist -v
corelist [-a] <ModuleName> | /<ModuleRegex>/ [<ModuleVersion>] ...
corelist [-v <PerlVersion>] [ <ModuleName> | /<ModuleRegex>/ ] ...
```

## OPTIONS

-a modulename

lists all versions of the given module (or the matching modules, in case you used a module regexp) in the perls Module::CoreList knows about.

```
corelist -a utf8
```

```
utf8 was first released with perl 5.006
```

|          |       |
|----------|-------|
| 5.006    | undef |
| 5.006001 | undef |
| 5.006002 | undef |
| 5.007003 | 1.00  |
| 5.008    | 1.00  |
| 5.008001 | 1.02  |
| 5.008002 | 1.02  |
| 5.008003 | 1.02  |
| 5.008004 | 1.03  |
| 5.008005 | 1.04  |
| 5.008006 | 1.04  |
| 5.008007 | 1.05  |
| 5.008008 | 1.06  |
| 5.009    | 1.02  |
| 5.009001 | 1.02  |
| 5.009002 | 1.04  |
| 5.009003 | 1.06  |

-? or -help

help! help! help! to see more help, try --man.

-man

all of the help

-v

lists all of the perl release versions we got the CoreList for.

If you pass a version argument (value of \$], like 5.00503 or 5.008008), you get a list of all the modules and their respective versions. (If you have the `version` module, you can also use new-style version numbers, like 5.8.8.)

In module filtering context, it can be used as Perl version filter.

As a special case, if you specify the module name `Unicode`, you'll get the version number of the Unicode Character Database bundled with the requested perl versions.

---

**EXAMPLES**

```
$ corelist File::Spec

File::Spec was first released with perl 5.005

$ corelist File::Spec 0.83

File::Spec 0.83 was released with perl 5.007003

$ corelist File::Spec 0.89

File::Spec 0.89 was not in CORE (or so I think)

$ corelist File::Spec::Aliens

File::Spec::Aliens was not in CORE (or so I think)

$ corelist /IPC::Open/

IPC::Open2 was first released with perl 5

IPC::Open3 was first released with perl 5

$ corelist /MANIFEST/i

ExtUtils::Manifest was first released with perl 5.001

$ corelist /Template/

/Template/ has no match in CORE (or so I think)

$ corelist -v 5.8.8 B

B                                1.09_01

$ corelist -v 5.8.8 /^B::/

B::Asmdata                      1.01
B::Assembler                    0.07
B::Block                        1.02_01
B::Bytecode                     1.01_01
B::C                            1.04_01
B::CC                           1.00_01
B::Concise                      0.66
B::Debug                        1.02_01
B::Deparse                      0.71
B::Disassembler                 1.05
B::Lint                         1.03
B::O                            1.00
B::Showlex                      1.02
```

|             |         |
|-------------|---------|
| B::Stackobj | 1.00    |
| B::Stash    | 1.00    |
| B::Terse    | 1.03_01 |
| B::Xref     | 1.01    |
