

**NAME**

Encode::EBCDIC - EBCDIC Encodings

**SYNOPSIS**

```
use Encode qw/encode decode/;
$posix_bc = encode("posix-bc", $utf8); # loads Encode::EBCDIC
implicitly
$utf8 = decode("", $posix_bc);      # ditto
```

**ABSTRACT**

This module implements various EBCDIC-Based encodings. Encodings supported are as follows.

Canonical	Alias	Description
-----------	-------	-------------

cp37		
cp500		
cp875		
cp1026		
cp1047		
posix-bc		

**DESCRIPTION**

To find how to use this module in detail, see *Encode*.
