NAME

B::Assembler - Assemble Perl bytecode

SYNOPSIS

```
use B::Assembler qw(newasm endasm assemble);
newasm(\&printsub); # sets up for assembly
assemble($buf);  # assembles one line
endasm();  # closes down

use B::Assembler qw(assemble_fh);
assemble_fh($fh, \&printsub); # assemble everything in $fh
```

DESCRIPTION

See *ext/B/B/Assembler.pm*.
